Hi Sergei

In the last few days I've installed upgrades and betas of these two programs
and have 5 or more icons to delete at each upgrade. No problem but it would
be simpler not to have superfluous ones created in the first place.

Sergei,

I have been using Seatty for weather fax reception for some time now, and find the picture quality is much better than any other decoding program that I have used including some commercial programs. I have one small problem that maybe you can advise me on, however. For some reason I don't decode the stop signal automatically. When several maps are sent concurrently, the margin is shifted on each map, making it difficult to cut and paste in order to provide a printable map. Is there any way to adjust the sensitivity of the stop signal?
Thanks for any help.

Carl

2116. SeaTTY 1.22 beta is published

Yahoo group: dxsoft
Date: 2003-09-26 13:14:35 UTC
From: Sergei Podstrigailo
Topic: 2116 Message: 2116

Hello All,

I just have uploaded SeaTTY 1.22 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

A problem with FAX synchronization losing while image scrolling was fixed.

If start tone is found during image receiving, SeaTTY saves image and starts
new image receiving now.

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

From KOTAYA II
Hyères islands (VAR)
France

Hello Sergei,

Thanck you for the update. I am at sea and I am testing SeaTTY 1.21 . I am impatient to test the new v 1.22. Effectively, I had noticed the problem with FAX synchronization losing while image scrolling.

I am very happy to use SeaTTY associated with NavMsgs of Gerard Hageman because its versatile and very efficient logbook and the possibility to preset the RTTY and NAVTEX frequencies . It is now the two softwares I prefer. The new decoder of SeaTTY for NAVTEX and RTTY run very well, even by weak signal from far stations or by thunderstorm not too strong. I thinck it is the best decoder I know, for simple great public blu receptor.

However I have a request about the AFC for NAVTEX receiving :

To allow the automatic NAVTEX decoding in good conditions (for avoiding maximum starting at noisy signals because the NAVTEX signals are intermittent) can you restrict the AFC for the NAVTEX reception at +/- 250Hz around the central demodulator frequency of 1700Hz (Tx frequency). What dou thinck of that option or modification, is it possible to have it ?

Thanck you very much

Best greatings

Roger Proust
(France)

Yes, I thought about something similar ...

Probably, will be useful to use AFC speed value as borders from last manually set frequency, not from current frequency ...

BTW, you can try to set very big AFC speed (1500) so far.
In this case AFC will search strongest signal with proper shift in all sound band ...

2120. Sound cards in .INI file ??

Yahoo group: dxsoft
Date: 2003-09-27 19:27:51 UTC
From: jordu_2000
Topic: 2120 Message: 2120

Hi all. supposedly with 2 sound cards, "CWGET.INI" ,you can select
the card by
the "SoundCardNumber" parameter of [CwGet] section of the
CWGET.INI file.
"SoundCardNumber=0" means a first sound card, "SoundCardNumber=1"
means a
second card etc. Negative value means system default sound card....
Well I have the following in my CW Get folder, and I can not find
a 'Soundcard' reference to save my bifocals. So what is it ? I have:
CWGET 669KB Application
CWGET 9KB GID File
CWGET 20KB Help File
CWGET 1KB Configuration settings
CWGETR 9KB GID File
CWGETR 21KB Help File
CWGHISEN 7KB Text Document
CWGHISRU 7KB Text Document
LICENSE 4KB Text Document
REG-RUS 5KB HTML Document
SAMPLE 1KB CWG File
unins000 6KB DAT File
unins000 70KB Application
In windows XP. I've looked in all of them and do not find the
Soundcard reference, except in history. Do I add a command ? I'm
SURE someones seen this one. Thanks fer any help. I'm eager to get
this running. 73's KE8PA Steve

2121. Automatic decoding of messages NAVTEX

Yahoo group: dxsoft
Date: 2003-09-26 18:32:59 UTC
From: roger.proust
Topic: 2121 Message: 2121

Hello Sergei,

Thanck you for your quick answer.

RP :
To allow the automatic NAVTEX decoding in good conditions (for avoiding maximum starting at noisy signals because the NAVTEX signals are intermittent) can you restrict the AFC for the NAVTEX
rp> reception at +/- 250Hz around the central demodulator frequency of 1700Hz (Tx frequency). What dou thinck of that option or modification, is it possible to have it ?

SP :
<Yes, I thought about something similar ...
<Probably, will be useful to use AFC speed value as borders from last manually
<set frequency, not from current frequency
<BTW, you can try to set very big AFC speed (1500) so far.
< In this case AFC will search strongest signal with proper shift in all sound
< band ..."

RP:

I have already try but I have no good result. Because you have more chance to find a strong noise in a very wide band specially in the harbour when you prepar your navigation (it is the case today with the AFC of SeaTTY: 2509 Hz) that in a narrow band of +/- 250 Hz (it is my proposition) around the central demodulator frequency you have chosen (1700Hz in my case).

Best greatings

Roger Proust

This value are correct if you use RTS for PTT-switch
and DTR for KEY-IN switch.

Does your interface really has _two_ switches -
one for PTT and second for KEY-IN ?

2125. SeaTTY 1.23 beta is published

Yahoo group: dxsoft
Date: 2003-09-30 11:39:23 UTC
From: Sergei Podstrigailo
Topic: 2125 Message: 2125

Hello All,

I just have uploaded SeaTTY 1.23 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
SeaTTY versions history

V1.23
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram by short red lines .
V1.22
A problem with FAX synchronization losing while image scrolling was fixed.
If start tone is found during image receiving, SeaTTY saves image and starts
new image receiving now.
V1.21
RTTY and NAVTEX decoders were rewritten.
Decoding quality was vastly improved.

Topic: 2125 Message: 2126

Hi, dxsoft

I am using AAtest log and Cluster monitor
When open Cluster window in AAtest I always see empty window.

Questions about Cluster monitor:
1. Feature Search DX
always replay "DX is not found" even i see DX call in cluster main window.

2. Status Coloring enabled but not working.
Were the data source for coloring spots?
I'd try to run AAtest & Cluster monitor same time.
What i did wrong?

From: Robert Pantazes
Topic: 2127 Message: 2127

I just purchased AAlog and put away my paper logs.
The question I have to the group is during a contest such as ARRL Sweepstakes. Where on the AAlog, do you put the exchange information of "consecutive serial number, operator type / power, call, last two digits of year licensed and section"?
On CQ WW DX which has a lot less exchange information I feel I can use RS/RST box for signal report followed Zone, I am I correct in this matter?

Hello Robert,

Tuesday, September 30, 2003 , you wrote to me:

RP> I just purchased AAlog and put away my paper logs.
RP> The question I have to the group is during a contest such as ARRL Sweepstakes. Where on the AAlog, do you put the exchange information of "consecutive serial number, operator type / power, call,
RP> last two digits of year licensed and section"?
RP> On CQ WW DX which has a lot less exchange information I feel I can use RS/RST box for signal report followed Zone, I am I correct in this matter?
AAlog has a special contest module for contest activity. But ARRL
Sweepstakes is not supported now but I will add it to list soon.

Best regards,
Alexander mailto:aia@...

2132. Re: [dxsoft] SeaTTY 1.23 beta is published

Yahoo group: dxsoft
Date: 2003-10-01 13:41:00 UTC
From: Roger Proust
Topic: 2125 Message: 2132

Hello Sergei,

I have made my first trials of the new SeaTTY v 1.23 .

NAVTEX:

Excellent
Thanck you for the new modification about the AFC in NAVTEX mode. Now, I can decode automaticaly, from Cross Lagarde (Toulon) Station, NAVTEX messages with my old BLU receptor SANGEAN 803 A which only allows with the clarifier button a setting of the frequencies not under 100Hz .The general setting was :

frequency : 516 KHz (2000 Hz below 518 KHz) for english messages
488 KHz (2000 Hz below 490 KHz) for french messages
local AFC : 150 Hz
global AFC : 600 Hz
Clarifier knob setting in middle course without setting frequency

With my new BLU receptor SANGEAN ATS 909 wich allow a setting of the frequency with a precision of 40 Hz, I can set and memorise in my receptor for the NAVTEX reception :

516.3 KHz (-1700 Hz below 518 KHz) for english messages
488.3 KHz (-1700 Hz below 518 KHz) for french messages

with for SeaTTY:
local AFC : 50 Hz
global AFC : 300 Hz/ 250 Hz

RTTY (Offenbach)

Excellent .No problem because the emission are permanent.

FAX MTO

The decoding of the FAX MTO (Offenbach, Nortwood, Rome) pictures is excellent and the problem with the scrolling bars has disappeared.
However as I have already asked you, can you add on the FAX window a setting zoom button (1/1,1/2) or reduce the scale of the picture to can see the whole (or almost) picture during decoding.

Thanck you very much for all

Best Greatings

2137. TrueTTY 2.24 beta is published

Yahoo group: dxsoft
Date: 2003-10-03 09:13:58 UTC
From: Sergei Podstrigailo
Topic: 2137 Message: 2137

Hello All,

I just have uploaded TrueTTY 2.24 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
TrueTTY Versions History

V2.24
MultiFSK decoder was improved.
V2.23
AX25 decoder was rewritten.
Noise-immunity was great improved in HF-PACKET and
slightly improved in UHF-PACKET.
V2.22
BPSK31 and QPSK31 decoders were rewritten.
QPSK31 decoding quality was vastly improved.
V2.21
AMTOR-FEC (SITOR-B, NAVTEX) decoder was rewritten.
Decoding quality was notably improved.
V2.20
User can select optimal or wide filters via "Filters" menu in RTTY and ASCII
modes now. Wide filters can be useful to decoding signals corrupted by polar
flutter. Use optimal filters in all another cases.
V2.19
RTTY and ASCII decoder was rewritten to improve decoding quality.
V2.10
The documentation was updated.
Auto-recognizing of callsigns and control numbers was improved
in contest mode.
Some minor bugs were fixed.
[...]

2140. need testers.

Yahoo group: dxsoft
Date: 2003-10-05 17:57:36 UTC
From: Alexander Anipkin
Topic: 2140 Message: 2140

Dear dxsoft users,

Author of the DXAtlas and IonoProbe work under new project. This is
freeware TRX control core. Our programs will use this interface to
communicate with TRX. We need beta testers. Please note you MUST have
good skills with computer and PC/TRX communication.

Omni-Rig is a dual interface COM/OLE component for transceiver/receiver control.
Its key features are: multi-threading: several programs, even if written by different authors,
can control the rig via Omni-Rig at the same time; external rig description files: you can add
support of new rig models just by creating ini files describing the CAT commands of the rig;

Currently Omni-Rig is in the beta testing phase. Please feel free to participate in the project by testing the code and the rig description files, or by creating your own rig description files.

Currently Supported rigs

Tested: TS-570, TS-850, TS-870
Being tested: FT-900, FT-920, FT-1000MP, IC-746Pro
Testers required for: All other Kenwoods, FT-100D, IC-718, IC-756ProII

Other TRX will add as soon as possible.

Best regards,
Alexander mailto:aia@...

Alexander,

I'm willing to help, but I have to admit, I'm not completely
sure what you're looking for.

I'm a 15 year programmer, an electrical engineer, licensed in
ham radio since 1954, currently holding an Amateur Extra Class here in
the US.

I have a number of rigs, currently using an ICOM 761. I
believe I have interfaced this to AALog via a serial interface which
you pointed me towards.

I will have a look at this - it is a Laptop with a built in sound
card - other programs seem to function ok but I will check.
Thanks for the reply.
Eddie

From: aviationradio
Topic: 2148 Message: 2148

Hi.
I am a SWL for the last 49 Yrs and have just downloaded and
installed DXsoft Cluster monitor.

Very useful Software package - I would like to register this
Software - however being a SWL i arent right sure of the Legal
aspects of using online Cluster monitoring.

I dont see any mention anywhere of SWLs not been allowed to monitor
the Cluster other than on the registration form it does say a
callsign is required to register the software.

Also after doing various online searches for info on the online DX
Clusters it does say that a licence is required to monitor online DX
Cluster activity.

Can anyone please clarify for me the above as before trying to
register Cluster Monitor.

Many thanks in advance.
Terry ! RAOTA 1365 ! UK.

Topic: 2145 Message: 2149

Hello again Sergei,
Yes you are correct !! - I have un-installed the sound card drivers
and re-installed them and now the program functions ok.
I think there may be a problem when the laptop is in the docking
station.
Thanks again.
73's
Eddie

Hello Sergei, ei2fs and all,

Sergei, thanck you very much for the new modification of SeaTTY V 1.4 about
the scale of the picture in the FAX window , I have asked.
It is perfect !
I have Windows 2000 Service Pack 4 and I run and stop SeaTTY without
problem.

Best greatings

Hello All,

I just have uploaded SeaTTY 1.24 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

"M-" and "M+" buttons was made to change image scale in the FAX receiving window.

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

2153. SeaTTY 1.30 is released

Yahoo group: dxsoft
Date: 2003-10-08 08:59:26 UTC
From: Sergei Podstrigailo
Topic: 2153 Message: 2153

Hello All,

I just have uploaded SeaTTY 1.30 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
SeaTTY versions history

V1.30
The documentation was updated.
Minor changes in FAX Auto Start/Auto Stop process were made.
V1.24
"M-" and "M+" buttons was made to change image scale in the FAX receiving
window.
V1.23
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram by short red lines .
V1.22
A problem with FAX synchronization losing while image scrolling was fixed.
If start tone is found during image receiving, SeaTTY saves image and starts
new image receiving now.
V1.21
RTTY and NAVTEX decoders were rewritten.
Decoding quality was vastly improved.
[...]

2157. SeaTTY suggestions

Yahoo group: dxsoft
Date: 2003-10-08 15:07:39 UTC
From: John Weston
Topic: 2157 Message: 2157

I've just installed the latest version and I like the short "user selected frequency" lines you've added which suggest additions for a future release... :

1. How about similar (different colour or dotted) lines or a transparent box to indicate the the range of the AFC settings? This would allow adjustment of the AFC to avoid responding to an adjacent channel interference signal when the transmitting station shuts down, using the spectrogram to achieve this

2. Can we have an option to "return to manual tune point" to cause the sampling frequency lines to jump back to the manual lines when there is no signal, or on pressing a button, etc. The sampling point may have drifted off due to reception of noise between transmissions and the current way of snapping them back to the manual point using the mouse can move the user selected sample points.

I like the new AFC setting. The global limits make it easy to prevent the drift of the sample points towards the low frequency noise (due to the computer interference...) when there is no incoming signal. Is it correct that the local AFC setting cannot cause a deviation greater than the global? I would assume this from the names. If the local figure is greater than the global, then the speed at which the AFC operates is increased, not its total range. Correct?

3 Would it be possible to add a "input attenuator" slider or setting similar to that of the AFC & SQL to the program to adjust the soundcard recording volume control? This would remove the need to have the separate recording control box open to manipulate the levels into the program - I have a fixed line-output from my receiver so cannot adjust this. (I've also got caught with the input muted, wondering why the program wasn't working... :-)

4. Don't forget my request for added questions to the set-up to optionally prevent the creation of unwanted icons on the desktop and the program folder when installing upgrades... :-)

Regards John

Hmm, it is too common question.

I'd suggest install SeaTTY, read documentation and try ...

You can search HF-FAX transmissions near these frequencies:

3853 kHz
7880
8040
11085
13880
13884
4610
14434

4614
3622
7305
9970
13597
18220
22720

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

Hello Sergei, I am new to this group. I installed SeaTTY but cant find any documentation to tell me how to use it. Only asking me to register. Well, I paid some $100. to get on this group and now it asks me to register again. Am I doing something wrong? Should unregistered copy work for some 30 days to try it? I can not get anything. just giberish on the screen.
I purchased Rigblaster that is connected to the sound card. I tried your frequencies but nothing legible coming out.
I might need some help.
Thanks, Karel, VA3KO

Hello Sergei, thanks for the help, when I click on Contents, I get message: can not find seatty.hlp..re-install.
I reinstalled and saw the contents file, thanks. but as soon as I got out of it, I could not get it back, only right after the each installation for a moment..I printed it out before I closed the window, so I am OK now. Thanks, Karel, VA3KO

From: roger.proust
Topic: 2169 Message: 2169

Hello Sergei, Karel, and all,

Some recommandations for new users of SeaTTY, about decoding NAVTEX, RTTY, Weather FAX :

Before all, you must previously, shift the officiel frequencies on BLU receiver of about:
- 1700 Hz for NAVTEX and RTTY reception,
-1900 Hz for Weafher FAX reception,

Then adjust with the clarifier knob of the receiver the two picks of the blue signal on the two red marks of the current spectrum window of SeaTTY.You can also move the two red marks with the pointer of the mouth.You can also use the AFC of SeaTTY, see below :

My trials with my two BLU receivers (extract from my email sended to Sergei) :

NAVTEX:

Excellent
Thanck you for the new modification about the AFC in NAVTEX mode. Now, I can decode automaticaly, from Cross Lagarde (Toulon) Station, NAVTEX messages with my old BLU receptor SANGEAN 803 A which only allows with the clarifier button a setting of the frequencies not under 100Hz .The general setting was :

frequency : 516 KHz (2000 Hz below 518 KHz) for english messages
488 KHz (2000 Hz below 490 KHz) for french messages
local AFC : 150 Hz
global AFC : 600 Hz
Clarifier knob setting in middle course without setting frequency

With my new BLU receptor SANGEAN ATS 909 wich allow a setting of the frequency with a precision of 40 Hz, I can set and memorise in my receptor for the NAVTEX reception :

516.3 KHz (-1700 Hz below 518 KHz) for english messages
488.3 KHz (-1700 Hz below 490 KHz) for french messages

with for SeaTTY:
local AFC : 50 Hz
global AFC : 300 Hz/ 250 Hz

RTTY (Offenbach)

Excellent .No problem because the emission are permanent.

FAX MTO

The decoding of the FAX MTO (Offenbach, Nortwood, Rome) pictures is excellent .

Recommandations :

I recommend at all users of SeaTTY to download free software NavtMsgs of Gerard Hageman which runs perfectly with SeaTTY (I have tested it at sea on my sailing boat and at home). NavtMsgs wich has an excellent ergonomy, has a very complete broadcast shedule and you can select previously the NAVTEX and RTTY frequencies. Moreaver, NavtMsgs has a very versatile logbook and you can very easily keep or rubbed all messages you want.

Website adress and email of NavtMsgs software :

http://home01.wxs.nl/~hagem358/
gerard.hageman@... (you can write him from me)

Best greatings

Hello Sergei, no wonder my SeaTTY could not work, I did not have cable from radio to the sound card.
Now I see some signal on the screen, however even after reading the documentation and info from Roger, I can not get any picture or readable wording output on the screen. Perhaps if someone would send some actual real setting examples, then it may work. I wonder if I need some attenuator, but not sure where to find. Perhaps attenuating cable is enough?
I would like to register my copy only if I would know that it will work. 73, Karel, VA3KO

2174. Navtex, RTTY, Weather Fax receptions with SeaTTY

Yahoo group: dxsoft
Date: 2003-10-11 17:23:04 UTC
From: roger.proust
Topic: 2174 Message: 2174

Hello Karel,

You must check your antenna, the wire liaison between the out line (or speaker) exit of your receiver and the inline (or micro) entrance of your computor. After that, check the setting of your sound card, if you use the entry "in line" (or micro) of your computer, you must select, on your recording sounds window, in line (or micro) entrance and move the sound cursor at its middle position.
That's all !!!!!
SeaTTY always works perfectly .You have certainly only a problem of setting of your computor or of your receiver (check if you are on BLU mode !!!). I recommend you, once more, to download free NavtMsgs of Gerard Hageman (http://home01.wxs.nl/~hagem358/) which is set to run perfectly with SeaTTY (I have even tested these softwares during my sailing trip in Italy and Greece).I always received perfectly RTTY, NAVTEX, and Weather Fax of Offenbach or/and Northwood.

Best greatings

Roger Proust

2175. Sampling frequencies-Slant correction

Yahoo group: dxsoft
Date: 2003-10-12 10:04:20 UTC
From: roger.proust
Topic: 2175 Message: 2175

Hello Sergei,

The reception of weather FAX from Offenbach and Northwood is perfect even at home and I appreciate very much the new v 1.3 SeaTTY and the functions of "M-" and "M+" buttons which are used to change the scale of receiving picture.

However, I am a slight problem with the slant correction .To day sampling frequency of 11025 Hz is almost good for me. When I want to make a light slant correction, I save it correctly and the new frequency is well saved in the ini file of SeaTTY : it is for exemple, 11024,8956 Hz .
But, when I stop and start again SeaTTY the slant correction is not operating and the picture is very slant.I thinck, in that case, the software can only read 11024Hz and not the numbers (0.8956) after the decimal point.Have you a solution for that problem?
Thanck you very much

Oops!

It is really bug.
It occurs if your regional settings use "," as decimal separator.

Will be fixed.

There are two ways to avoid this bug so far:

1. Change decimal separator from "," to "." in Windows regional settings.

2. Open SEATTY.INI and replace "SamplingFreq=11024,8956" to
"SamplingFreq=11024.8956"
But "." will be changed to "," again when you click to "Setup/Save Setup"
:-(

Best regards,
Sergei mailto:amx@...

There is a short description what's wrong and what is going on.

Hardware:
PC PIII 850MGz, 128M
Kenwood TS-940SAT connected to COM2 through CAT interface from CwType Help file

Software:
Windows 98SE
CwType 1.30

Mox is ON. It means any time I push a key on keyboard trx is switched to send until buffer is empty. I works, but some time send buffer catchs a garbage and sends it together right ones.
In other words, when I type "cq cq cq bla bla" it can sends "cq cq cq cq bla bla bla [74*(fr3****" and stuff like that.
Any ideas ?

73,
Arthur EW1CK

2185. DXSoft Cluster Monitor

Yahoo group: dxsoft
Date: 2003-10-13 19:30:55 UTC
From: ei2fs
Topic: 2185 Message: 2185

Hello,
I think I have some problems with the program.

When I click on Connect it will not connect to the
site and I get (" is not a valid integer value)
Is the default site down and if so are there other sites
that I can use?

If I try and close the program I get
(error loading MIDAS.DLL)

I am using Windows 2000 Service Pack 4

From: Michael L. Thomas
Topic: 2177 Message: 2186

I have been having trouble connecting to various
http://oh2aq.kolumbus.com..... addresses and staying connecting. Also
when I do connect and it updates, none of the spots change. Does anyone know
if the cluster is having trouble?

Regards,
Mike, NA5U

Topic: 2177 Message: 2187

Hello Michael,

It's seems that oh2aq.kolumbus.com cluster is down. So, Cluster
Monitor can't get pages for tossing. You can use telnet options for
getting spots.

Tuesday, October 14, 2003, 6:12:09 AM, you wrote:

It's seems that oh2aq.kolumbus.com is down. You can use other cluster
sites with the same page format or you can use telnet options for
getiing spots.

e> If I try and close the program I get
e> (error loading MIDAS.DLL)

Please check if the midas.sll is in your System directory.

Eddie,
I'm having the same kind of problem. It has been working fine for several days and now this has started. I reported it to Eugene and he indicated he would work on it but my initial loading of the program was working fine. I'm wondering if the OH site is having trouble? Good luck.

Hi Sergei

Thank you,
The same values are used in my CWTYPE.INI. Unfortunately, it
happens ;-)
But only in time I use trx. I haven't reproduced it when trx is
switched off. In this case it looks like interference caused issue.
Anyway, thanks a lot for your help. Suppose, that isn't software
related impact.

73,
Arthur

Yes.
You can get it with "User-defined charset" with charset file (.CWG or .CWT)
with upper case letters.

Open sample.cwg in text editor (f.e. Notepad) and EDIT it !

See examples below.

Before editing:

```
. e
- t
.. i
.- a
```

After editing:

```
. E
- T
.. I
.- A
```

2207. Correct TrueTTY Setup???

Yahoo group: dxsoft
Date: 2003-10-19 16:14:02 UTC
From: NA5U
Topic: 2207 Message: 2207

I need help setting up TrueTTY on my FT-1000MP MarkV. Has anyone got one successfully running? Here are some ways I've tried:

* TrueTTY: RTTY, 45 Baud, 170Hz shift, Normal; FT-1000: RTTY, USB, Menu 6-1 (RTTY Polarity) nor & reverse
* TrueTTY: RTTY, 45 Baud, 170Hz shift, Reverse; FT-1000: RTTY, LSB, Menu 6-1 (RTTY Polarity) nor & reverse

In both cases, I am able to copy other stations with no problem. I am just not being heard. When someone does acknowledge my call, I get reports of 'not transceive'. I have successfully operated MMTTY after learning that a FT-1000MP MarkV has to have Menu 6-1 set to Reverse. In both cases, I am keying the rig via a Com port and the pin 3 TX FSK signal to pin 1 of the rig's RTTY jack in the rear. I am new to RTTY so anything is possible. Any help is appreciated.

Regards,
Mike, NA5U

Sergei,
Yes, it is selected. I have made a few contacts, it just seems as though I'm off frequency. I recently worked the BQ9P which was listening up, so I would not have had the standard offset. The problem is when I try to work simplex or standard RTTY.
Regards,
Mike

2211. SeaTTY 1.31 was released

Yahoo group: dxsoft
Date: 2003-10-21 12:10:18 UTC
From: Sergei Podstrigailo
Topic: 2211 Message: 2211

Hello All,

I just have uploaded SeaTTY 1.31 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
V1.31
A bug was fixed. The slant correction parameter was read wrong from ini-file
if a system used comma as decimal separator.
V1.30
The documentation was updated.
Minor changes in FAX Auto Start/Auto Stop process were made.
V1.24
"M-" and "M+" buttons was made to change image scale in the FAX receiving
window.
V1.23
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram by short red lines .
V1.22
A problem with FAX synchronization losing while image scrolling was fixed.
If start tone is found during image receiving, SeaTTY saves image and starts
new image receiving now.
V1.21
RTTY and NAVTEX decoders were rewritten.
Decoding quality was vastly improved.
[...]

IMHO -- NO.

But you may buy USB to SERIAL adapter (10..30$), like is
http://www11.cds.ne.jp/~torii/011011usb.htm

Hello J.,

Wednesday, October 22, 2003, you wrote:

JAL> Is it possible to use USB port for PTT interface with TrueTTY? (instead
JAL> of old type serial port). If yes, what are the connections to the USB
JAL> plug?

You can buy and install general USB/COM converter and then use this new COM-port.

Take to attention, that most of USB/COM converter don't support speed below
300 Bd, so they can not be used for FSK manipulation via TxD output.

Best regards,
Sergei mailto:amx@...

Hi.
I could be well wrong but the Yaesu FT 101 range of traneceivers are in the 1970s or there about era - going
up 30 yrs old they dont have a facility or interface for computer control.

The later FT101Z and ZD may have an interface. i arent too sure.

Sorry if i am wrong and hope that helps.

Terry.

I think he's asking for wiring diagrams for your cable connections in/out of your transceiver (microphone, RS-232 jack, modular jack, etc.) so he can try to better support it in the program.
Many of Alexander's programs are in their youth stage because he's constantly modifying them to better support us. His programming's very good/complete & kudos for software that's on par with most anything on the market. Alex & Sergei's product support is pretty well unparalleled by their peers.

Terry is right. I have an FT101B, FT101E and FT101F...all are from 1974
and 1975 long before computers were used in ham radio. Although they have
plug-in circuit boards, they cannot be tuned by computer.

Hi Derek
What kind of TNC are we talking about here?
I am most familiar with Kantronics TNC's, and yes they can be reprogrammed.
The answer for one of the Kantronic's TNC's would be to replace the original Programming "chip" with a proper one for what you are trying to do.
Hope this helps, 73 Paul K9PEP

I'm sure it's possible. Remember, of course, that it's pretty illegal to encrypt your communications over ham. I suppose a new protocol's fine but no secret codes and encryption with the sole purpose of obscuring your communications. I'm curious, what are you trying to do and why? There might be a much, much simpler solution.

Hi Derek,
There is a start up procedure with almost all TNC's. Maybe you have done this already?

Basically it is getting your computer and your TNC to talk to each other.

The Jibberish calls you are receiving, do you know what country they are from?

They well could be from some other country. Or maybe not tuned quite properly.
Are you using the proper sideband?

I think most use upper side band no matter what frequency they are on. Are you set for SSB or for FM?

What actual frequency are you trying to use?

Maybe one of the above items will help or jog your memory or something. If not, let me know and we will keep trying.

I all ready have the interface and cables, what i just need is a
software that run my transceiver in my computer, thanks for the help
73 ssssss.

2240. AALog 2.45 is ready

Yahoo group: dxsoft
Date: 2003-11-05 19:36:31 UTC
From: Alexander Anipkin
Topic: 2240 Message: 2240

Dear dxsoft users,

I just upload AALog 2.45 to the websites.

Attention!!!
QSL service data format changed. Please empty QSL queue
befor you install update. Update will replace some files.

AALog ver. 2.45

- USA-CA and URDA awards added
- log name in the "Previous QSO" window displayed
- number of QSL in the list in the "QSL service" window displayed
- QTH info from log configuration may be printed for every QSO on the label
- note from the log for each QSO may be printed on the label
- state and grid fields for the internal callbook added
- fields for state, grid, manager in the "Global edit" window added
- dropdown list for the state field added
- DXAtlas interface updated
- some minor bugs fixed

Update (you must have at least ver. 2.2)
http://www.dxsoft.com/aal_update.zip
http://www.hamport.com/aal_update.zip

Full version
http://www.dxsoft.com/aal2.zip
http://www.hamport.com/aal2.zip

Best regards,

???
AALog and TrueTTY exchange data by default.

L> The previous version of AAL had a little dish to click for connection.

The only "dish" I remember is a button to switch support of external callbook
(QRZ etc.)

2247. TrueTTY 2.25 is published

Yahoo group: dxsoft
Date: 2003-11-07 08:07:12 UTC
From: Sergei Podstrigailo
Topic: 2247 Message: 2247

Hello All,

I just have uploaded TrueTTY 2.25 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========

TrueTTY Versions History

V2.25
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram or waterfall by short thin lines.
V2.24
MultiFSK decoder was improved.
V2.23
AX25 decoder was rewritten.
Noise-immunity was great improved in HF-PACKET and
slightly improved in UHF-PACKET.
V2.22
BPSK31 and QPSK31 decoders were rewritten.
QPSK31 decoding quality was vastly improved.
V2.21
AMTOR-FEC (SITOR-B, NAVTEX) decoder was rewritten.
Decoding quality was notably improved.
V2.20
User can select optimal or wide filters via "Filters" menu in RTTY and ASCII
modes now. Wide filters can be useful to decoding signals corrupted by polar
flutter. Use optimal filters in all another cases.

From: Lou
Topic: 2251 Message: 2251

Alex,

I found TRUETTY the easiest teletype program to tune RTTY signal.

I also find WriteLog to be one of the best contesting program, except for RTTY.

Did anybody connect the TRUETTY and WL together? That would be a "killer" for RTTY!!

AA> Ask for WL authors.

I prefer AALog contest module also, but there is one way to connect Writelog
and TrueTTY.

TrueTTY is used as external modem emulator (see help-file for details) via
a pair of real or virtual COM-ports.
"Data exch. speed" must be 110 baud.

Writelog use these options:

Mode - 110 baud ASCII,
TU Type - Dumb terminal unit.

Best regards,
Sergei mailto:amx@...

> And what is the main it advantage with the AALog contest module?

Main advantages of WL vs AAtest are:
-beter work with Cluster;
-Very useful Band Map;
-Support of WAEDC contest;
-More detaled reports for all contests;
-Supporting Single Operator with to radios contesting

>
> L> Did anybody connect the TRUETTY and WL together? That would be a "killer" for RTTY!!

Plugin modules can be writen third party programmers becouse WL API is open.
For examle WL has MMTTY support by plugin from non WL programmers.
>
>
> Best regards,
> Alexander mailto:aia@...

73! Gennady,RX3DCN
With hope to see new versions of AATEST with more needed functionality
or TrueTTY plugin to WL.

p.s. I am using TrueTTY & AAtest for most RTTY contests except WAEDC.

If WriteLog could handle the External Modem the way that WinWarbler does you would be set. I can even support my MFJ464 Morse Keyer that way. It is very nice but of course WinWarbler is not a contest program!
WriteLog is very good though, the RTTY copy in WriteLog seems more than adequate to me.

If you backup only logs then you need "reconnect" they to AALog.

To connect the existing log, which is not listed yet, perform the same operations
as you do when making a new log. But when pointing a file name, find the file with the
desired log.

Then run tools|refresh databases

2267. New add-on for TrueTTY

Yahoo group: dxsoft
Date: 2003-11-27 16:24:01 UTC
From: Sergei Podstrigailo
Topic: 2267 Message: 2267

Hello All,

New software for TrueTTY was made.

TFDXS is a port of TFKISS software to Win32 to work with TrueTTY.
In turn, TFKISS is a port of "The Firmware" for TNC to Linux.

The programs works with TrueTTY via DXSOFTEX.DLL,
and with operator or another software via console or via TCP-connection.

For example, TFDXS can be used to catch data from packet dx-cluster
and send in to a logger via TCP/IP .

It is freeware. You can download software and source code from

http://www.dxsoft.com/tfdxs.zip .

New TrueTTY beta-version 2.26 was also published.
Fast squelch in AX25 mode was made.

2270. Tx Delay In TrueTTY

Yahoo group: dxsoft
Date: 2003-11-30 01:44:15 UTC
From: David Buell
Topic: 2270 Message: 2270

I'm exeriencing in TrueTTY a delay of up to about 5 seconds from when a Tx command is given, either from a macro or from clicking on the Tx button, utill the PTT keys up. This is particularly annoying for any text sent from a macro with a leading ~[tx] command, since the first few characters in the Tx buffer are sent before keyup. I originally thought that this problem was related to the installation of a newer version - it seemed to happen only after I upgraded from version 1.93 to 1.98. (It also occurs in version 2.2) I tried going back to earlier versions, making sure I did a complete uninstall of any existing version, including removing any reference to TrueTTY in the registry. I even installed my original registration key and configuration file. The problem continues to occur. Has anyone else experienced this problem and found a solution?

Regards

David - NN7RM

Hello All,

I just have uploaded TrueTTY 2.30 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========

TrueTTY Versions History

V2.30
"State" and "IOTA" fields was added to catch-word popup menu.
"State", "Grid" and "IOTA" options was added to
"Setup / Text / Use "Other" field as" menu.
TrueTTY can send information about used mode to logger now.
See "Setup / Other / Send Mode to logger when mode was changed" ,
"Setup / Other / Send Mode to logger together with callsign" an
"Setup / Other / Send mode ... as ..." options.
V2.26
Fast squelch in AX25 mode was made.
V2.25
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram or waterfall by short thin lines.
V2.24
MultiFSK decoder was improved.
V2.23

AX25 decoder was rewritten.
Noise-immunity was great improved in HF-PACKET and
slightly improved in UHF-PACKET.
V2.22
BPSK31 and QPSK31 decoders were rewritten.
QPSK31 decoding quality was vastly improved.
V2.21
AMTOR-FEC (SITOR-B, NAVTEX) decoder was rewritten.
Decoding quality was notably improved.
V2.20
User can select optimal or wide filters via "Filters" menu in RTTY and ASCII
modes now. Wide filters can be useful to decoding signals corrupted by polar
flutter. Use optimal filters in all another cases.

Hello gang, I wonder if anyone else is having any problems getting CwType to open after installing in WindowsXP. All I get is the opening display with no data and it just hangs there with the hourglass being displayed. I've installed and operated with CwGet and have no problems what-so-ever. Tried to install on two different WinXP computers and got the same results... Any help out there? James Reed.

2278. Missing multipliers

Yahoo group: dxsoft
Date: 2003-12-09 13:26:35 UTC
From: olenilves
Topic: 2278 Message: 2278

Dear Alexander,

I need some help. After CQ WW DX (CW) contest I discovered that only 40m band multipliers existed in the log, other bands are empty, total nr of QSO-s 408.

The QSO list with all 408 QSO-s still exist.

Kind regards
Andres
ES1AN

On the same computer or another one?

Take to attention, that CwType use _internal_computer_speaker_ ,
not sound card.

Some new computers have not internal speaker at all .

But some soundcards have special input for speaker output ...

I believe that Sergei answered it best, most of the mother boards have an output for a speaker but very few are connected up to any. I just ran a pair to that connector on the mother board and hooked it to an 8 ohm speaker that I had and it worked great. Jim Reed.

2285. Com Port

Yahoo group: dxsoft
Date: 2003-12-12 09:30:34 UTC
From: longarm_53
Topic: 2285 Message: 2285

I installed CWType and TrueTTY, but am having trouble getting PTT to work on a COM port. I installed an RS-232 tester on the COM ports to view output states. RTS, TD, and DTR remain on both in recieve and in transmit mode. Nothing flickers to indicate data online.

I tried all possible combination of settings for KeyPortType and KeyPortNumber.

Is there another .ini setting that needs to be adjusted ?

the speaker is connected properly. The speaker pins are separated by
two unused pins on early mother boards. And speakers do go bad. But
are easy to replace. Try plugging in a speaker from a spare or
junked computer.

From: R. Nelson
Topic: 2285 Message: 2288

Sergei,

PTT does not work in TrueTTY or CWType.
But it does not matter for TrueTTY because TrueTTY gives audio output from the sound card. I can use VOX on my radio to key the transmitter. Changing COM ports in setup does not make PTT work on either port.

There is no sound card output for TrueTTY, so I need PTT to work, as well as a data output in order to key my radio.

I tried all settings listed in documentation that came with CWType.

OS = Win95

Thanks for your reply.

From: longarm_53
Topic: 2285 Message: 2289

I have no PTT or data output on COM 1 or COM 2, no matter which settings I use. I tried all combinations that came with documentation for INI file and tried both COM settings in TrueTTY setup.

Hi Sergei

Thank you so much for replying as promply as you did

I have had some serious health problems that has affected my mental capacity

I seem to be so impatient as oppose to my pass

I have extensive electrical/computer and electronic training to the board level, yet

I seem to be experiencing a very difficult time recoverying

your product is great, but you gift the the family of hams and electronic enthusist is greater

you gave it free ,,I believe this will help some hams and hams want to be

this was the great spirit that grew the family but now its about money

again thank you and I will try it

I believe the previous computer did have a internal speaker

I will try

Thanks again

2293. Logging satellite qso's

Yahoo group: dxsoft
Date: 2003-12-13 21:34:43 UTC
From: Larry Rappaport
Topic: 2293 Message: 2293

I use AALog2. How are you supposed to log split band satellite qso's?

I indicated the split band by using 144/29 or 432/144 in the band
column, but they won't validate when exported in ADIF for submission
to the ARRL Logbook of the World program.

From: olenilves
Topic: 2294 Message: 2294

Hi gang,

I have the latest AALog 2.45 software version installed.
Could somebody advice me:

1)how to change font on labels?

2)How to set to work the new feature: "note from each QSO may be
printed on the label" ? Seems not working for me.

73,
Andres, ES1AN

Hello olenilves,

Sunday, December 14, 2003 , you wrote to me:

o> Thanks for prompt respond, yes the first question 1) how to change
o> font on QSL label?
Run AAlog labels generator. Open file *.frf from labels folder click
on field and select new font on toolbar

o> 2). Could you describe how Label Generator(actualy it shows software
o> name Designer- Untitled) linked to the AAlog I can not find any help
o> files and can not understand how I can make my own set ups for my QSL
o> labels.
You create labels formats in frf files and put they to \Labels\QSL (or
Labels\envelop for prining on envelops) folder. AALog will locate them
and show in the labels list.

The best way to create new label is to edit existed label.
Gray field with caption "Master data" is NECESSARY part of the QSL
labels format.

Best regards,
Alexander mailto:aia@...

I have a custom frf file for Avery 5160 3 by 10 sheets. Alex sent me the original file and I massaged it to my liking. It'll print labels with up to 4 qso's with date, mode band and RST, will include the qsl manager if it's in qso field or in the qsl manager database. Works well. I'll e-mail it to anyone who's interested. By the way, I learned how to do it by trial and error. It's not easy. Took some doing to get it right. BV7 labels is also a good label printer but it got tiresome trying to keep both programs in sync.

Hi Alexander,

I got this answer from Dave AA6YQ in the rec.radio.amateur.dx
newsgroup:

>ARRL requires the following fields for satellite QSOs uploaded to LotW:
>
>1. CALL
>2. QSO_DATE
>3. TIME_ON
>4. MODE
>5. FREQ or FREQ_RX
>6. FREQ_RX or BAND_RX
>7. SAT_NAME
>8. PROP_MODE (must be set to SAT)
>
>See http://www.amsat.org/amsat/news/ans2003/ans03292.html for additional
>information.
>
> 73,
>
> Dave, AA6YQ

To implement this in AALOG2, seems like it would require a few
additional columns. I think it might work to export the log in ADIF,
and then edit the ADIF file before signing. What do you think?

lhe> v. 2.45 . It seems not working for me.

you need add to label field [PersonalMessage] and in the QSL service
window fill field "personal message" for DX's.

To add this field open label in Labels generator and find this field
in the "Insert data field" window. Just drag'n'drop this field on the
label.

Best regards,
Alexander mailto:aia@...

Could you indicate me their fonctions.They seem not to operare.Thanck you.

They change a scale of received FAX _image_ in right bottom window.
Surely, if you select _text_ message or don't select any message at all,
these buttons don't work (and are disabled).

2310. SeaTTY 1.35 is released

Yahoo group: dxsoft
Date: 2003-12-22 12:06:48 UTC
From: Sergei Podstrigailo
Topic: 2310 Message: 2310

Hello All,

I just have uploaded SeaTTY 1.35 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
SeaTTY versions history

V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
V1.32
FAX images are saved in PNG format now.
"M-" and "M+" buttons on the main form change preview image scale now.
V1.31
A bug was fixed. The slant correction parameter was read wrong from ini-file
if a system used comma as decimal separator.
V1.30
The documentation was updated.
Minor changes in FAX Auto Start/Auto Stop process were made.
V1.24
"M-" and "M+" buttons was made to change image scale in the FAX receiving
window.
V1.23
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram by short red lines .
V1.22
A problem with FAX synchronization losing while image scrolling was fixed.
If start tone is found during image receiving, SeaTTY saves image and starts
new image receiving now.
V1.21
RTTY and NAVTEX decoders were rewritten.
Decoding quality was vastly improved.
V1.20
The documentation was updated.

2316. Happy New year/NavtMsgs and SeaTTY

Yahoo group: dxsoft
Date: 2004-01-01 13:17:45 UTC
From: Roger Proust
Topic: 2316 Message: 2316

Hello Sergei and all,

Happy new year 2004 to Sergei and all the list.

I have been becoming an unconditional user of SeaTTY. In effect, I thinck by experience that SeaTTY has now the best demodulator for decoding easily NAVTEX, RTTY, MTO FAX with a cheap receiver (precision :100hZ). I have since 2000 an SANGEAN ATS 909 which is able to memorize the frequency with a precision of 40 Hz, it is in that case still much more easy.

In fact, I use to run, for several years, during all my sailing trips in mediterranean sea, the freeware NavtMsgs (ex NavTTY) of Gerard Hageman associated at SeaTTY.

The great interest of NavtMsg is :
- selection options, not for Navtex only, but WeatherTTY and in the last version Seanop too on several charts (unique !)
- very complete frequency and weather forecast schedule
- logbook very efficant and versatile

I have deeply tested for three months the the last version of NavtMsg associated with SeaTTY and the result is remarkable and more than excellent.

I recommend you that software and guive you the website adress :

http://home.planet.nl/~hagem358

The two softwares are also on the excellent and well known web site HFFAX of Marius Rensen at software rubric "new":

Hi Bob
The kind of hooking up the XCVR to the PC depends on the XCVR. Consult
the manual.
Usually there is an ACC jack on the back of the radio. In all modern
equipment (last 12 or so
years), the manual describes what has to be done.

Hello Bob,

visit :
http://www.aa5au.com/rttyinterface-html

there are a lot of somple interface for FSK,PTT & CW Keying
furthermore visit:
http://www.packetradio.com/00rascal/

you can find there all solutions either to be made by yourself and ready
to be buyed according to your transceiver.

2324. ActiveX Control for receiving TTY data

Yahoo group: dxsoft
Date: 2004-01-07 21:23:26 UTC
From: Philmore Productions
Topic: 2324 Message: 2324

I am looking for an ActiveX Control that would allow me to take a Wave file and decode TTY text from it. Does anyone know where I can get this?

Thank you.

-Phil Scopes

2325. Mic input for TrueTTY/CWGet/SeaTTY

Yahoo group: dxsoft
Date: 2004-01-10 18:02:43 UTC
From: Louis Sica, Jr.
Topic: 2325 Message: 2325

Is there any way to have TrueTTY/CWGet/SeaTTY receive audio input from the sound cards's "Mic" jack instead of "Line In".....

And if there isn't..... might that be a feature in a future version?

:-)

Pretty Please?

:-)

LSJ> Is there any way to have TrueTTY/CWGet/SeaTTY receive audio input from the
LSJ> sound cards's "Mic" jack instead of "Line In".....

It is VERY hard, because you must to read documentation to do it :-)

But let's try to read it together:

==========
The choice of a signal source (line in or microphone input) and record and output levels
are made by the OS ("Volume control" in the system tray).
==========

LSJ> And if there isn't..... might that be a feature in a future version?

To choice a signal source (line in or microphone input) and record level do that steps:

Double click on "Volume" icon in tray,
then go Option->Properties->(Recording; Show the following...; OK)-> ...

Make sure that you change _Recording_ options, not _Playback_ options.

When you select input level check again that you do not overload the input of sound card.

Best regards,
Sergei mailto:amx@...

From: 4X4KF Michael Barak
Topic: 2325 Message: 2328

That depends on the input voltage. 10 mv is more or less OK
for Mic. input. 300 mv is too much. Use the Line-in input.
In both cases you have to make sure your first stage of the Sound
blaster is not driven into distortion. Or in other words, decreasing the
Volume
is not always the right solution.

2329. TrueTTY 2.31 beta is published

Yahoo group: dxsoft
Date: 2004-01-16 18:14:16 UTC
From: Sergei Podstrigailo
Topic: 2329 Message: 2329

Hello All,

I just have uploaded TrueTTY 2.31 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

TrueTTY can decode (not transmit) AMTOR-ARQ (SITOR-A) signals now.

I heard SITOR-A transmissions about 12590...12605 kHz

Best regards,
Sergei mailto:amx@...

K> Callbook table :Field 'State' not found

K> I can't enter a new qso?
it's look like you install aalog to another folder. And you start
new AALog but use old data tables now. Please check this. If this is
right I will describe solution.

Best regards,

2332. Abt Sattelites

Yahoo group: dxsoft
Date: 2004-01-17 14:11:31 UTC
From: Alexander Anipkin
Topic: 2332 Message: 2332

Dear dxsoft users,

I will add full SAT support to AALOg 3.

Is it OK if AALog 2.x will export to adif info about Satellite using
info from "Note" field?

For Sat-QSO you will add string like
<SAT_NAME:AO-10>
<SAT_MODE:...>
to note field and AALog will trasform it to ADIF format.

Best regards,
Alexander mailto:aia@...

Hi Alexander,

That works for me, thanks. I would like it if there were an
option to translate the frequency field. I have used 144/29 or
432/144 to indicate rcv/xmt frequencies. I presume in your new
version, you will probably have separate receive and transmit
frequency columns (fields). You might want to provide simple mapping
for those us who recorded old satellite contacts in the rcv/xmt or
xmt/rcv format.

Thanks,

2334. CwGet install & set up

Yahoo group: dxsoft
Date: 2004-01-21 21:36:04 UTC
From: tjoh37
Topic: 2334 Message: 2334

I have 'CwType' & purchased 'CwGet' in the help (connecting sound card with receiver) it talks about line in, mic input, & record options. In my sound card recording control, I have mic, line in, & wave out. Of these 3 should I pick 'line in'. Now where do I set the volume for what I have selected.

This help file also refers to the 'SoundCardNumber' in the file 'cwget.ini'. I do not find a file 'cwget.ini' in my computer.

I think I need HELP --- Please
Thanks
Tom

2335. Error message on True TTY V. 2.30

Yahoo group: dxsoft
Date: 2004-01-22 04:24:44 UTC
From: loumecseri@bestnetpc.com
Topic: 2335 Message: 2335

Hello Alex,

I am using the following programs:

1. True TTY V. 2.30
2. AALTEST2.EXE
3. Hamport.

I am setting the program for upcoming BART Spring contest.

After making a QSO and I hit save, I receive error message

"Access violation at address 00404C68 in module AALTEST2.EXE.
Read addresses FFFFFFFB"

This thing worked a few weeks ago.

It looks you see "Playback" options.

You need to switch to "Recording options"

Double click on "Volume" in tray ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

t> ? Of these 3 should I pick 'line in'.? Now where do I set
t> the volume for what I have selected.

There should be level control for each of source and general volume control.

t> This help file also refers to the 'SoundCardNumber' in the
t> file 'cwget.ini'.? I do not find a file 'cwget.ini' in my computer.

If you have registered CwGet,
CWGET.INI is in the same directory with CWGET.EXE

By default it is "C:\Program Files\CWGET\" directory.

From: tjoh37
Topic: 2334 Message: 2338

Hello Sergei,
What I need your help with is, do I select "line in" from my record
options.
Do you think I should set the level control to "high", "low", or
middle.

The reason I don't have the "cwget.ini" any longer is, I was
playing with the program with out reading any of your instructions.
When I would make any sounds in the room the top and bottom of
the "cwget" screen would start to dance.
I thought the program was not working correct. I uninstalled the
program. Downloaded new copy of "cwget137.zip" and re-installed.
The program has registered in the top border with my 'call' but it
should have started un-registered so I could copy & paste from E-
mail "thanks for your registration"
Dated 1-19-2004 @ 8:23 am.

What should I do so you know I paid the $35.00
Thanks
Tom

See to spectrogramm in CwGet and select _appropriate_ level .

t> The reason I don't have the "cwget.ini" any longer is,? I was
t> playing? with the program with out reading any of your instructions.?
t> When I would make any sounds in the room the top and bottom of

"Sound in the room" is defined by "Playback option" of soundcard
or "Sound Output" menu of CwGet.

You _can_ decode by CwGet and don't hear CW from soundcard speakers,
if you wish.

t> I thought the program was not working correct.? I uninstalled the
t> program.? Downloaded new copy of "cwget137.zip" and re-installed.?

t> Dated 1-19-2004 @ 8:23 am.

It is not bug, it is feature :-)
CwGet save registration info to CWGET.INI _and_ Windows registry.

CWGET.INI will be created if you click on "Setup/Save Setup" menu.

If you want to change reg-info of already registered CwGet,
run CwGet and press Ctrl-Alt-E keys. Then paste reg-code there ...

Best regards,
Sergei mailto:amx@...

I had a similar problem - loud sounds in the shack would interfere. The
problem is the built-in microphone was engaged, thus mixing ambient noise
with the incoming signals.

Go into 'recording options' and mute the Microphone, or slide it's
volume control to the bottom.

Hope this helps..

Cheers

Hi Alexander,
This seems to be the only problem.
I think what I will try tomorrow is backup the data and uninstall
everything and re-install to see how I get on.
The problem may have arisen when I was changing the colours and fonts
because the font was too small - but when I changed the colours there
was a conflict with colours for calls that had been QSL'ed so I
removed the colouring and all seemd to be ok but this problem remains.
I will let you know during/after the weekend.
Thanks.
Eddie

Date: 2004-02-02 16:07:51 UTC
From: loumecseri@bestnetpc.com
Topic: 2346 Message: 2346

Alex,

I am using:

True TTY V.2.30. COM2
AALog Contest module V.1.0 Beta 25.
Hamport v. 0.9 Beta COM1

IC-756PRO for radio

JBI cw and rig interface COM1
Rigblaster for RTTY interface COM2

CQ-WW RTTY WPX contest require RST and a 3 digit s/n

F2 looks like this:

F2 ~[tx] TU ~[nin] CFM? KE1F ~[lf] `[rx]

I see on the tx screen: "TU CFM? KE1F" (NO S/N)

I put 000 in the name field for the first QSO.

Q-1:How can I print/send s/n?
Q-2:How can I re-transmit s/n without advancing my s/n?

73s

Lou KE1F / ZF2LM

lbc> F2 looks like this:

lbc> F2 ~[tx] TU ~[nin] CFM? KE1F ~[lf] `[rx]
^^^^^^^ this is wrong!
Rigth macros is
~[tx] TU ~[iNumberSent] CFM? KE1F ~[lf]`[rx]

lbc> I see on the tx screen: "TU CFM? KE1F" (NO S/N)

lbc> I put 000 in the name field for the first QSO.

lbc> Q-1:How can I print/send s/n?
See macros above

lbc> Q-2:How can I re-transmit s/n without advancing my s/n?
what you mean? AAtest will increase number when you save QSO.

Here is my RTTY macroses for contests.

Macro0="~[cl]"
Macro1="~[tx]cq TEST RZ4AG RZ4AG RZ4AG bk`[rx]"
Macro2="~[tx]~[iCall] de RZ4AG RZ4AG `[rx]"
Macro3="~[tx]~[iCall] de RZ4AG = HI TU UR 599 ~[iNumberSent]-~[iNumberSent]-~[iNumberSent]
bk`[rx]"
Macro4="~[tx]~[iCall] de RZ4AG = HI UR 599 ~[iNumberSent]-~[iNumberSent]-~[iNumberSent]
BK`[rx]"
Macro5="~[tx]~[iCall] TU 73! QRZ RZ4AG RZ4AG test`[rx]"
Macro6=""
Macro7=""

```
Macro8=""
Macro9=""
Macro10="~[tx]?????`[rx]"
Macro11="~[tx] RZ4AG RZ4AG RZ4AG RZ4AG`[rx]"
Macro12="~[cl]"
```

I don't use macroses for save QSO. I prefer press Save button in the AATest

I hope it help.

Best regards,
Alexander mailto:aia@...

From: ua9ffv@perm.cbr.ru
Topic: 2346 Message: 2348

Hi, Lou!

I am using following setup in AAtest module:

Way Config\autosend: Enable autosend feature, CQ macros - F5, Answer macros - F3, Confirm macros -F4, Call macros - F1, Send number - F2, Enter key in the "Call" field... and Enter key in the "Received number" field save data.

In TrueTTY:

```
Macro0="~[cl]`[rx]"
Macro1="~[lf] ~[iCall] DE UA9FFV UA9FFV K~[lf]`[rx]"
Macro2=" ~[iCall] QSL TU ~[er] ~[iNumberSent] ~[iNumberSent] K~[lf]`[rx]"
Macro3=" ~[tx] ~[iCall] TU ~[er] ~[iNumberSent] ~[iNumberSent]
~[iCall]~[lf]`[rx]"
Macro4=" ~[tx] ~[lf]~[iCall] QSL GL QRZ? DE UA9FFV~[lf]`[rx]"
Macro5=" ~[tx] ~[lf] CQ TEST DE ~[m8] ~[m8] CQ~[lf]`[rx]"
Macro6=" QSL "
Macro7=" AGN? "
Macro8=" UA9FFV"
Macro9=" ~[iCall] "
Macro10=" QSO B4"
Macro11=" ~[rx]"
Macro12="~[cl]"
Macro13=""
Macro14=" ~[iOldCall] QSL UR ~[er] ~[iOldNumberSent] ~[iOldNumberSent]
~[iOldNumberSent] ~[lf]`[rx]"
Macro15=" ~[iCall] ~[er] ~[iNumberSent] ~[iNumberSent] ~[iNumberSent] DE
~[m8] K~[lf]`[rx]"
Macro16=""
Macro17="~[tx] ~[lf] QRZ? DE ~[m8] ~[m8] K~[lf]`[rx]"
Macro18=" QRZ?"
Macro19=" NR?"
Macro20=" DE UA9FFV"
Macro21=""
Macro22=""
Macro23=" K~[lf] `[rx]"
```

I work with the correspondent, using fields "Call" and "Number" window of "New QSO". And when he asks me to repeat, I press "Macro14".

Hope to meet you in WPX.
Good luck in the contest, 73!

Sergey

2349. TrueTTY 2.32 beta is published

Yahoo group: dxsoft
Date: 2004-02-03 15:35:50 UTC
From: Sergei Podstrigailo
Topic: 2349 Message: 2349

Hello, All!

I just have uploaded TrueTTY 2.32 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
TrueTTY Versions History

V2.32
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram and "waterfall" now.
To move a visible part of spectrogram or "waterfall" to left or right
drag it by mouse with Alt key down.
A frequency ruler was made.
The Alt-I hotkey switches the phase indicator on and off in PSK modes now.
V2.31
TrueTTY can decode AMTOR-ARQ (SITOR-A) now.
V2.30
"State" and "IOTA" fields was added to catch-word popup menu.
"State", "Grid" and "IOTA" options was added to
"Setup / Text / Use "Other" field as" menu.
TrueTTY can send information about used mode to logger now.
See "Setup / Other / Send Mode to logger when mode was changed" ,
"Setup / Other / Send Mode to logger together with callsign" and
"Setup / Other / Send mode ... as ..." options.
V2.26
Fast squelch in AX25 mode was made.

2350. upgrade from AALog 2.0 to 2.45

Yahoo group: dxsoft
Date: 2004-02-10 22:33:24 UTC
From: mrpred0822
Topic: 2350 Message: 2350

I have been trying out some logging programs and have decided AALog is the best there is and I want to upgrade to 2.45. Is there an upgrade, or do I need a full install. If a full install is required, is there anyway to keep my version 2.0 programs and logs until I make sure everything is ok in the 2.45. I tried to install 2.45 into a new directory, but I get an error message and the computer locks up. I did notice it is looking for a file in the default directory, C:\program files\aalog\.

Thanks for the great program

2351. Imported records

Yahoo group: dxsoft
Date: 2004-02-11 00:24:46 UTC
From: Paul Beringer
Topic: 2351 Message: 2351

Hello all,
I was going thru my log and checking my WAS status. I noticed that the imported USA records do NOT show up in the award manager. So I individually checked a few callsigns to be sure the state was in the record. Yup, they are there except they are in the format Ga Wa Il Nj etc. Changing them to uppercase and resaving the record somehow changes its status in the database so that it shows up properly in the awards manager. I'm not thrilled with the prospect of going thru all my contest Q's and individually changing each record. That could get tedious real fast. Sergie, how can I prevent this from happening in the future? Maybe changing the state abbreviation to upper case prior to importing? Or does AAlog simply import them without actually attaching the record to the awards manager database? I use TRlog for contesting and imports go just fine.

No upgade from 2.0 to 2.45 available. To many change indata
structures. You need install full package.

To save old version _copy_ it to another folder. Then uninstall it.
Install new version in the same folder. Reconnect your log in new
version (Create new log and select name of the old log file).

to restore old version move new version to another folder and copy old
files.

Best regards,
Alexander mailto:aia@...

Topic: 2351 Message: 2354

Well that was a good try Alex but it still didn't work. I'll walk you through the exact procedure I used to confirm this.

1. Found a qso with K7ZS that had Or for the state. That's Oregon
2. Ran awards manager for WAS and looked thru all the Oregon contacts and I did not find the qso.
3. Edited the qso by changing the state prefix from Or to OR and saved.
4. Ran awards manager for WAS and looked thru all the Oregon contacts and the K7ZS qso is now there.

Any other ideas Alex?

I just check source of the program. Very strange. This function perform
the same operation with awards database as edit feature.
Before searching in the database I convert state name into the
uppercase.

Are you mark any log in the log list in the Refresh databases window?

Best regards,

HI Sergei,

Gee, I feel so foolish for not remembering that Cabrillo command is in the AALog and not in the True TTY program. I made a note in my file for future reference.

Question: I am trying to set up True TTY and AALog for the National Contest Journal (NCJ) North American Sprint RTTY contest. The exchange in this contest: His call - My call - My Consecutive s/n - My name - My state.

I cannot find it in my AALog Contest module. Any idea?

lbc> The signals you trying to copy have poor spacing and timing.

It can be useful to select appropriate detector threshold in case of bad
signal.

But surely, CwGet can not receive right, if transmission is WRONG :-)

Thought CwGet do not need machine generate CW, it just need right sent CW ...

And CwGet can not beat human hears in very bad conditions ...

CwGet can do great _help_ to operator, but it can not _replace_ him.

2371. AALog 2.46 is available

Yahoo group: dxsoft
Date: 2004-02-29 17:49:45 UTC
From: Alexander Anipkin
Topic: 2371 Message: 2371

Dear dxsoft users,

I just upload new version AALog

AALog ver. 2.46 - 29 Feb 2004

- RDA list updated
- it's possible to use Enter key to save QSO in the "New QSO" window
- limited features to logging satellite QSO added
- minor bugs fixed

!!!After you install update you need select tools|Refresh databases to
renew your statistic.

Note about Satellites.

If you want to upload satellite QSO into LOTW then you need to add
this lines into "Notes for this QSO" field:
<SAT_NAME:name>
<SAT_MODE:mode>
<PROP_MODE:mode>

for example
<PROP_MODE:SAT>
<SAT_MODE:V/u>
<SAT_NAME:UO-14>

You can download update package from
www.dxsoft.com/aal_update.zip
www.hamport.com/aal_update.zip

Full package available from
www.dxsoft.com/aal2.zip
www.hamport.com/aal2.zip

Best regards,
Alexander mailto:aia@...

Where is a good site to find the bands and the times of day (zulu) that may produce DX communications. The DX and propagation bulletins that I've seen have more info than I know what to do with.
Thanks
Tom KC8YOL

The only program I have found useful for propagation prediction is
available from
http://www.qsl.net/g4ilo/main.html
It gives prediction for the whole world and not only for a certain
direction. It is useful for turning the beam in the most promising
direction.
Good DX

2377. SeaTTY

Yahoo group: dxsoft
Date: 2004-03-08 07:37:32 UTC
From: Sayonara95@aol.com
Topic: 1951 Message: 2377

I am in Italy trying to get SeaTTY 1.35 (properly registered) to work with new laptop running WindowsXP. I have not used SeaTTY previously, though I have received RTTY and HF-FAX with a DOS program on an older computer for ten years. The mono output from my radio is wired to the two stereo inputs of my laptop with a proper ground connection. RTTY and HF-FAX signals sound good. RTTY messages from Deustcher Wetterdienst are received legibly on 4581.1, 7644.1 and 10098.9 kHz USB. Good HF-Fax signal is available on 7878.1 kHz.

Problems:

1. SYNOP messages (which appear typically to begin something like
ZCZC 537
SIVX45 EDZW 080300
BBXX
44005 08031 99432....) are saved even if the Setup box "Don't save SYNOP messages" is checked and Setup is saved.

2. The spectrogram window shows two tall and two short vertical red lines, but no horizontal signal line.

3. Oscillogram window shows horizontal red line and tiny signal line crawling across it, less than one millimeter from top to bottom of signal.

4. Checking and unchecking the Logorithmic boxes in "Setup --- View" changes nothing.

5. No HF-FAX is received. The oscillogram window shows very occasional vertical green lines. LPM speed detection fails. No combination of LPM and IOC produces results.

Any help will be appreciated. I did not see SeaTTY mentioned in the list of discussion topics. Please reply direct if appropriate.

Thanks, Charlie

Hello Sayonara95,

Monday, March 8, 2004, you wrote:

Sac> 1. SYNOP messages (which appear typically to begin something like
Sac> ZCZC 537
Sac> SIVX45 EDZW 080300
Sac> BBXX
Sac> 44005 08031 99432....) are saved even if the Setup box "Don't save SYNOP
Sac> messages" is checked and Setup is saved.

It can be happen if message was received with too many errors,
so the program didn't recognize it as SYNOP message ...

Sac> 2. The spectrogram window shows two tall and two short vertical red lines,
Sac> but no horizontal signal line.

Sac> 3. Oscillogram window shows horizontal red line and tiny signal line crawling
Sac> across it, less than one millimeter from top to bottom of signal.

Select signal source (line in or microphone input) and
record level by Windows ("Volume" in tray):

Double click on "Volume" ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

Make sure that you change _Recording_ options, not _Playback_ options.

Best regards,
Sergei mailto:sp@...

Topic: 1951 Message: 2379

Good Morning C:
I am using SeaTTY with Grundig 800 and Laptop w/xp and desktop Win98, both are working great. I use line out (A+B) to micro input of laptop) adjust record volume. I created two register entries so I do not have to switch back and forth for Ratt or FAX. Hope this helps.

2380. TrueTTY 2.33 is released

Yahoo group: dxsoft
Date: 2004-03-11 13:18:52 UTC
From: Sergei Podstrigailo
Topic: 2380 Message: 2380

Hello All,

I just have uploaded TrueTTY 2.33 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========
TrueTTY Versions History

V2.33
The documentation was updated.
AX25 software carrier detector was slightly improved.
V2.32
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram and "waterfall" now.
To move a visible part of spectrogram or "waterfall" to left or right
drag it by mouse with Alt key down.
A frequency ruler was made.
The Alt-I hotkey switches the phase indicator on and off in PSK modes now.
V2.31
TrueTTY can decode AMTOR-ARQ (SITOR-A) now.
V2.30
"State" and "IOTA" fields was added to catch-word popup menu.
"State", "Grid" and "IOTA" options was added to
"Setup / Text / Use "Other" field as" menu.
TrueTTY can send information about used mode to logger now.
See "Setup / Other / Send Mode to logger when mode was changed" ,
"Setup / Other / Send Mode to logger together with callsign" and
"Setup / Other / Send mode ... as ..." options.
[...]

2387. no FSK at speeds less than 75 baud

Yahoo group: dxsoft
Date: 2004-03-13 03:47:59 UTC
From: James Kelly
Topic: 2387 Message: 2387

Hello,

I'm setting up TrueTTY for the first time. Am using V2.33. I'm trying to use FSK on TxD because I want to take advantage of the audio filters on my Kenwood TS 870s.

The FSK seems to work fine at 75 baud and above. But below 75 baud, my FSK outout changes to a short character that is sent at a very high baud rate, every 300 msec.

I'm using a Sony VAIO with a USB com adapter. I haven't had any other problems with the COM adapter. It works fine with CWType where I use the adapter for PTT. The PTT using RTS with TrueTTY works fine also.

I used a scope to make sure my FSK interface is switching TxD properly for the Kenwood and it is.

Any advice?

Thanks,

Jim / ND6P

JK> I used a scope to make sure my FSK interface is switching TxD properly for
JK> the Kenwood and it is.

It is hardware problem.
I didn't see USB/COM converters which can support baudrates below 300 bauds.

But I heard that such convertetrs exists ...

JK> Any advice?

1. Use AFSK with PKT 300-baud filter.
It is wider that FSK filter, but it is better than nothing ...

2. Use standard COM-port, not USB/COM converter.

3. Try to find converter which can support slow baudrates ...

Best regards,
Sergei mailto:amx@...

Isn't it possible to get a serial or parallel add in from the MB slots?
Otherwise, perhaps a USB/Serial adapter would do the trick.

Sorry about the previous recommendation of USB/serial adapter. Didn't know
the baud rate was the original problem. Let us know how you work it out.
I'll have that problem some day, I'm sure. If you're using a laptop, my
company uses a "quad I/O serial card" that supports our requirement for a
9-pin serial connection for ports COM 2, 3, 4 and 5. Does that help?

No problem.

I looked at the USB to Serial adapters at a local store today and they only specify the highest baud rate, not the lowest. So I need to do some research.

The lowest speed on my current adapter is 75 baud. I don't remember serial ports running at speeds less than that. When I first started using serial ports around 1975, 110 baud was standard and 300 baud was considered high speed :)

So I'm probably going to have to stick with AFSK when using the laptop.

I bought a PCMCIA serial port adapter and it runs FSK fine at 45 baud :-)

Now I have the full functionality of the Kenwood TS870S available for use
with TrueTTY.

Thanks for the help.

2395. Sound card levels

Yahoo group: dxsoft
Date: 2004-03-26 04:08:33 UTC
From: lee_crocker
Topic: 2395 Message: 2395

I notice I need to set my sound card levels considerably higher for CwGet than I do for my PSK31 software. I have been using a freeware program called QuickMix to take a snapshot of the various soundcard settings for each program, and then switching as needed.

I was wondering if could save the file this prgram generates into the CwGet directory and if CeGet could look for this file and use it to automarically either run the QuickMix Program, or read the file and automarically set up the soundcard to the preset values? You coould get really fancy and store the values prior to initializing the CeGet program reset to the correct CwGet Values and then restore the values saved when you quit CwGet.

Just an idea

tnx

That's a good idea. I have a half dozen QuickMix snapshots for different applications that use the sound card. I access them with shortcuts on my Desktop. I name them so I can remember which one is which. It would be great if the applications would first activate the appropriate QuickMix snapshot. Something like a little batch file .... I used to do that sort of thing in DOS. Is it possible to run a little batch file in Windows?

So for example: Your shortcut to CwGet would run a small batch file, the first line would run the appropriate QuickMix snapshot then CwGet ..... Voila! the sound card is all set for CwGet. The same thing would be set for other applications. I am sure that some applications already pre-adjust the sound card .... like RealAudio.

Surely, bat-files can be executed in Windows.

From: lee_crocker
Topic: 2395 Message: 2398

here is a script that should do the trick

To set up the sound card using QuickMix and start CwGet or another program use the following script.

Download QuickMix and intstall it.
Set up the sound card parameters you want to save for a particular program and save them to a .qmx file using QuickMix.

Open Notepad and copy the script, that is the stuff between "start script" and "end script". Do not copy the start and end statement but only what is between. Change the path and program name in the quotes to the correct path and program that you want to open. Change the path and QuickMix file to the correct path and name for the .qmx file you want to change.

Save the notepad file to the desktop using a .vbs extension such as CwGet.vbs

run and this will start the program and set the sound card

start script.........

```
Dim qmx
Set qmx = CreateObject("WScript.Shell")
qmx.run "C:\CwGet\CwGet.exe",1
qmx.run "C:\0\CwGet.qmx",1
Set qmx = nothing
```

end script.........

Hi:

Thanks for the great explanation. I have been using Windows for years now and as a result I have pretty much become a program 'user' instead of a program 'writer'. Years ago when windows was young and the DOS was king I learned to program in 'BASIC' and remember having a lot of fun. I look at the example you gave and old memories came back. I look at it and I can read it hi. Tell me, what language would you say you used to write the 'script'? I think I would like to learn more.

This is called Visual Basic Scripting Language I think, hence the .vbs extension. It's good for writing little programs like this that can butter the toast or flash the screen black and white and things like that (its actually pretty powerful). There is s ton of stuff out there on this and it is built into windows from win98se and forward or can be downloaded and installed. I think the file is called scripten.exe.

One thing I didn't look at is what path names are legal. I have my ham programs all under a folder called "ham" (how origional) so I don't know how the script reacts to putting the files under "program files" for example. You may need to use the 8 character rename of program files or something like that. Or just put all your ham programs in "ham".

Okay ... I'm running win98se .... didn't find a file called scripten.exe. However I did find script.exe (a scripting tool) and script.doc (a succinct description of the scripting language). Apparently it is included in w98se for purposes of automatic direct dialing. I assume it could be used for other things as well.

I did a search and found 6 .vbs files along with parallel .js files (I assume they work together in some way) in the directory c:\windows\SAMPLES\. I read and tried them .... interesting. 2 of them (shortcut.vbs and registry.vbs) activated my Norton antivirus program! Interesting.

>One thing I didn't look at is what path names are legal. I have my

I have mine under "ham stuff' .... more original? hi.

Well thanks for getting me on the right track. I did some searching on the internet and there is indeed a lot of stuff on the subject. I will definitely learn more and perhaps spruce up my operations.

PS. I mentioned scripts with .VBS and .JS extensions. They are both
scripts, .VBS written in Visual Basic and .JS written in Microsoft
JScript. Back to my reading.

This task can be easy solved by Windows command processor (command.com or cmd.exe),
which is in any not broken Windows :-)

Create cwstart.bat (or cwstart.cmd for Win2000/XP) and copy this
text to it:

```
=====
start/w "F:\Program Files\QuickMix\QuickMix.exe" C:\TMP\qmx\test.qmx
F:
cd "F:\Program Files\CWGET"
start cwget.exe
=====
```

F: is my system disk there,
and C:\TMP\qmx\test.qmx is a full path and name to QuickMix file.

"start/w" means "start program and wait till it finished".

Best regards,
Sergei mailto:amx@...

Many thanks Sergei. This is a very simple solution that I can apply to a
number of different programs that use the sound card and different settings.

2405. CwType 1.31 beta is published

Yahoo group: dxsoft
Date: 2004-03-28 14:29:01 UTC
From: Sergei Podstrigailo
Topic: 2405 Message: 2405

Hello All,

I just have uploaded CwType 1.31 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

CwType can generate sound via soundcard now.
Used device is defined by SoundCardNumber parameter in CWTYPE.INI file.
"SoundCardNumber=-2" means internal speaker, "SoundCardNumber=-1" means
"default soundcard" , another value means soundcard number to be used.
Soundcard generated signal has sine waveform and smooth edges of envelope,
so it can be used to form CW signal by SSB transmitter.
Rise and decay time of soundcard generated CW-signals is defined
by "RiseTime" value of CWTYPE.INI . It is a time of signal rising from
0 to 100% level in milliseconds. A time from 10% to 90% level is about 0.6
of this value.

Best regards,
Sergei mailto:amx@...

Yes. Hamport is a COM-server it's possible to read info from in the
any other program.

2412. CwGet 1.38 is released

Yahoo group: dxsoft
Date: 2004-04-12 15:12:21 UTC
From: Sergei Podstrigailo
Topic: 2412 Message: 2412

Hello All,

I just have uploaded CwGet 1.38 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

Best regards,
Sergei mailto:amx@...
http://www.dxsoft.com

==========

CwGet Versions History

V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.
V1.37
CwGet removes all spaces in selected text transferred to a logger now.

The "Setup->Catch Word by One Mouse Click" option was made. When this
option is enabled, you can catch a word from RX window by single mouse
click, not double-click. But you still can select the part of the text by
a mouse dragging.

The "Setup->Catch Words in Contest Mode" option was made.
In this mode software doesn't use popup-menu to catch word to logger.
CwGet recognize callsign or control number automatically.

The "Setup->Copy Transferred Data to Clipboard" option was made.
When this option is enabled, data transferred to logger are copied to the
Windows clipboard also.
V1.36
Some minor improvements were made.
V1.35
A problem with scrolling of received symbols window was fixed.
[...]

Can i ask for help please - i have the registered version of
Cluster Monitor that upto now i havent had problems with,however i
have just tried to start Cluster Monitor but just get the report of--
-
DXSOFT Cluster Monitor start failed SDK Error.

I have tried several re - boots but no luck.

Many thanks in advance.
73s,
Terry.

Sorry. I can't find your email in the registerd user database.
What is your callsign and full name, please?

Best regards,
Alexander mailto:aia@...

Hello Alexander.
I registered Cluster Monitor around the 18 October
2003.

I ams an SWL so dont have a callsign but i believe i registered as

RAOTA1365

My full name is Terence Tankard.

At the time of registering i was using the mail address of i
believe

aviation.radio@...

I registered online and still have a copy of my reg details that you
sent me - i will send these reg details direct to you if you wish.

The mail i received from yourselves with my reg details was
electronically signed by Eugene

Sorry to cause all the inconvenience.
Terry ! Raota 1365 !

Hi Eugene.
Thanks for the mail.
I have tried an uninstall followed by a re-install and entering my reg details again but this doesnt solve the problem i am still getting the error message when trying to start Cluster Monitor.

The Program has been running fine for around 6 months - now the problem is showing up.

Almost forgot i am running Windows XP Home - also tried to get it to run on my machine using Windows 98 SE instead of XP but still no joy.
I have also tried downloading Cluster Monitor again to see if my saved download had some how got corrupted but still no joy.

Any ideas please.

Hi Again Eugene.
Last November i did install service pack 1 for Windows XP but i have been running Cluster Monitor fine since then until last week - i do have an anti virus package installed on the machine i use for Cluster Monitor - this i have disabled as i have done with my firewall software.
It isnt possibly for me to check if i can connect to DX Summit with Cluster Monitor as i just cant load and run Cluster Monitor at all as soon as i try to run the program a get the earlier mentioned error report and the software stops loading so of course i cant go any further.

Many Thanks.
Terry.

Hello Terry,

I develop and test Cluster Monitor under the Windows XP SP1 without
any problem. As I can see you are using AVG Antivirus. May be the
troubles is result of AVG work. Also I think AVG cant set hook to
the virtual machine of compatibility mode, so Cluster Monitor runs
fine.

If it is possible, please,un-install AVG software and try
to run Cluster Monitor.

Hello Karel,

the problem of the Cluster Monitor is very huge databases.
Terry run Cluster monitor 12 hours daily over 6 last months. It is very hard
work for the CM :)

the resolve is delete all dat files except cty.dat from the Cluster
monitor directory. Please note, all of your collected data will be
destroyed :(. Check filter settings. Also set delete options in
settings. Cluster Monitor can delete old spots automatically.

Hi.
Sorry delay in replying to your mail - we have been out most of the day and just got back.
As Eugene says it was the size of the database files that were causing the problem,doing as Eugene
suggested and deleting all .dat files except cty.dat sorted out the problem.

I wonder if it is possible to actually read a .dat file ?? if so how do you read them??.

Welcome Peter,
Look forward to hearing your questions. Much of the time, it seems like
half the traffic here's Sergei and his amiable cohort answering questions:)
Great support from those guys. Seems like a simple operation where they
keep building better mouse traps for us and, even if there's better software
out there, I'm heartened by the old-fashioned connection they have with us
(the customer). Too many times, when a business gets successful they
quickly make themselves unavailable for comment to "better serve you". :)
If you're interested in much more discussion, you'll probably find more on
any of the newsgroups.

Thanks to Maurice, John, and Sergei for your welcome.

Sergei, can you please tell me what is meant when you say, "I'd want notice, that is DXsoft products support list, and most of subscribers don't want to read about another things there." What is "DXsoft products support list" and where do I find it? What is meant by, "most of subscribers don't want to read about another things there?"

And John, tell me more about what a TS-2000 is and last but not least what is Sky Command?

I hope I don't end up boring you guys and hopefully gals with my endless questions. But, when you bring up something that I don't understand I feel it is important or you wouldn't have suggested it.

The DXsoft group is a small group of programmers/HAMs - UA9OV (ex UA9OSV), RZ4AG and
some another peoples.

This group develops programs for HAM radio and present them at http://www.dxsoft.com site.

This mail list, dxsoft@yahoogroups.com is intended to support DXsoft software
user. Users can get information about new versions of program there,
say them suggestion for new versions, ask question about software problem and
get answer from author or another user.

Best regards,
Sergei mailto:sp@...

2443. Re: [dxsoft] CW-type & CW-get

Yahoo group: dxsoft
Date: 2004-04-26 12:48:35 UTC
From: Thomas Johnson
Topic: 2432 Message: 2443

Hello Sergei
I'm sorry, I think you missed the reason for my note. It would be nice if there was a way to find other people that want to use a computer for decoding "CW". Do you have any ideas??
Thanks
Tom

2445. TrueTTY 2.34 beta is published

Yahoo group: dxsoft
Date: 2004-04-28 08:53:18 UTC
From: Sergei Podstrigailo
Topic: 2445 Message: 2445

Hello All,

I just have uploaded TrueTTY 2.34 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
Input and output sound devices can be selected in "Setup/Interface" menu
separately now. Not only device numbers, but device names are shown there
now.

The last feature is especially useful for using together with
"Wave Clone" and "Virtual Audio Cable". See my next message for details.

--
Best regards,
Sergei mailto:amx@...

2446. Useful software from our partner

Yahoo group: dxsoft
Date: 2004-04-28 09:17:07 UTC
From: Sergei Podstrigailo
Topic: 2446 Message: 2446

Hello All,

I want attend your attention to two useful programs by my friend
Eugene Muzychenko - http://www.nrcde.ru/music/software/eng/

The first program is Wave Clone.

Wave Clone is a Windows multimedia tool allowing you to share soundcard among several applications.
Because many audio (wave) drivers are single-client, allowing only single
application to use each card at same time, you cannot, for example, record from the microphone
to two application simultaneously.
Wave Clone brings multi-client feature to any audio card in your system,
allowing unlimited number of applications to use them at same time.

For example, this software can allow you to run two copies of TrueTTY and decode two PSK31 signal
simultaneously.

Second software is Virtual Audio Cable (VAC).

Virtual Audio Cable is a Windows multimedia driver allowing you to transfer audio (wave) streams
from one application to another. It creates a pair of Wave In/Out devices for each cable.
Any application can send audio stream to Out device, and any other application can receive this stream
from In device. All transfers are made digitally, providing NO sound quality loss

If more than one applications are sending audio to VAC, it will mix all streams together.
If more than one applications are receiving audio from VAC, it will share the same audio data
between all targets.

VAC is useful to record application's audio output in real time or transfer a sound stream to another
application processing it.

VAC needs no audio card; it is a "virtual audio card" itself.

Both programs are not expensive.
More over, registered users of TrueTTY, SeaTTY, CwGet or AAVoice
can purchase software with significant discount:

WaveClone for DXsoft users with 30% discount:
http://www.regsoft.net/purchase.php3?productid=48759&pc=3P68C

VAC for DXsoft users with 25% discount:
http://www.regsoft.net/purchase.php3?productid=39235&pc=1WU56

To get a password for these order page, drop a message to dreq@... ...

--
Best regards,
Sergei mailto:amx@...

2447. TrueTTY 2.35 beta is published

Yahoo group: dxsoft
Date: 2004-05-03 08:34:02 UTC
From: Sergei Podstrigailo
Topic: 2447 Message: 2447

Hello All,

I just have uploaded TrueTTY 2.35 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.35
BPSK-63 mode receiving and transmitting were made.
V2.34
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
Input and output sound devices can be selected in "Setup/Interface" menu
separately now. Not only device numbers, but device names are shown there
now.
V2.33
The documentation was updated.
AX25 software carrier detector was slightly improved.
V2.32
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram and "waterfall" now.
To move a visible part of spectrogram or "waterfall" to left or right
drag it by mouse with Alt key down.
A frequency ruler was made.
The Alt-I hotkey switches the phase indicator on and off in PSK modes now.
V2.31
TrueTTY can decode AMTOR-ARQ (SITOR-A) now.
V2.30
"State" and "IOTA" fields was added to catch-word popup menu.
"State", "Grid" and "IOTA" options was added to
"Setup / Text / Use "Other" field as" menu.
TrueTTY can send information about used mode to logger now.
See "Setup / Other / Send Mode to logger when mode was changed" ,
"Setup / Other / Send Mode to logger together with callsign" and
"Setup / Other / Send mode ... as ..." options.

2448. Hamport

2449. CWGet compared

Yahoo group: dxsoft
Date: 2004-05-04 08:17:19 UTC
From: Julian
Topic: 2449 Message: 2449

Greetings to all.

I just registered CWGet after a long evaluation. I am already a registered user of MixW multimode software, which was my main radio control software. MixW will decode CW, but in side by side comparison I found that CWGet is significantly better and will decode code that MixW prints up as garbage.

I also tried another program called, I think, MRP40. I would say that MRP40 is nearly as good as CWGet. Sometimes it would decode code that CWGet didn't get, and sometimes CWGet got it and MRP40 didn't. MRP40 is quite a bit more expensive and I understood that it uses a registration code that is locked to the computer, so you would have to buy two licenses to use it on the main shack computer and on your laptop for portable use. And you'd have to reapply to the author every time you changed your computer. That's not on as far as I am concerned, so CWGet gets my money as the best software CW decoder you can currently get.

Congratulations to Sergei for making such a good program. There's still a long way to go before computer software is as good at decoding CW as a good human operator, but what matters to me is that it still does a better job than I can!

Tuesday, May 11, 2004, you wrote:

D> I'd appreciate hearing specific settings here on the group. Any reader
D> can be touchy and the rest of us might get some operator tips to better use
D> the software.

For normal speed (15...40 WPM) default settings should be good.

Just switch off "Auto threshold" option and select appropriate threshold
level.

Surely, it will never be possible to get absolutely error-free
software CW decoding ...

CwGet can do great help to human operator,
but can not to _replace_ him ...

I use the following setting with my Kenwood TS870:

Main Filter - 140 Hz
Burst Filter - 200 Hz
Log Spectrogram
Log Oscollogram
Auto GTM (go to max)
AFC

Then I set the threshold red line manually.

JPC> it means AFC and why the values goes from 2 to up????

You'd better ask questions _after_ documentation reading,
not _in_place_of_ reading ...

Automatic threshold works worse than manual one.
When signal is off, it tries to determinate threshold to "decode" noise.

AFC means "Automatic Frequency Control".

Digits about AFC button determinate AFC speed.

Best regards,
Sergei mailto:amx2@...
http://www.dxsoft.com

2463. TrueTTY 2.36 beta is published

Yahoo group: dxsoft
Date: 2004-05-18 15:01:32 UTC
From: Sergei Podstrigailo
Topic: 2463 Message: 2463

Hello All,

I just have uploaded TrueTTY 2.36 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

Best regards,
Sergei

==========
TrueTTY Versions History

V2.36
A one minute sound buffer was made.
The "Replay" button click makes TrueTTY to re-decode previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Wave" directory.
Special macrosequences can be used also:
~[rpNN] - to replay last NN seconds;
~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
V2.35
BPSK-63 mode receiving and transmitting were made.
V2.34
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
Input and output sound devices can be selected in "Setup/Interface" menu
separately now. Not only device numbers, but device names are shown there
now.
V2.33
The documentation was updated.
AX25 software carrier detector was slightly improved.
V2.32
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram and "waterfall" now.
To move a visible part of spectrogram or "waterfall" to left or right
drag it by mouse with Alt key down.
A frequency ruler was made.
The Alt-I hotkey switches the phase indicator on and off in PSK modes now.
V2.31
TrueTTY can decode AMTOR-ARQ (SITOR-A) now.

[...]

2464. CwGet 1.39 beta and CwType 1.32 beta were published

Yahoo group: dxsoft
Date: 2004-05-25 09:05:43 UTC
From: Sergei Podstrigailo
Topic: 2464 Message: 2464

Hello All,

I just have uploaded CwGet 1.39 beta and CwType 1.32 beta to the main site and
mirror:
http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

Best regards,
Sergei mailto:amx2@...
http://www.dxsoft.com

==
CwGet Versions History.

V1.39
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequency is shown at spectrogram by short thin line.

A one minute sound buffer was made.
The "Replay" button click makes CwType to replay previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used in CwType (V1.32 and later) to
control this sound buffer also.
V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.
[...]
==
CwType Versions History

V1.32
Macrosequences for CwGet control was made :
~[rpNN] - to replay last NN seconds;

~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
These macrosequences work with CwGet 1.39 and later.
V1.31
CwType can generate sound via soundcard now.
Used device is defined by SoundCardNumber parameter in CWTYPE.INI file.
"SoundCardNumber=-2" means internal speaker, "SoundCardNumber=-1" means
"default soundcard" , another value means soundcard number to be used.
Soundcard generated signal has sine waveform and smooth edges of envelope,
so it can be used to form CW signal by SSB transmitter.
Rise and decay time of soundcard generated CW-signals is defined
by "RiseTime" value of CWTYPE.INI . It is a time of signal rising from
0 to 100% level in milliseconds. A time from 10% to 90% level is about 0.6
of this value.

2465. AALog Contest Build 27 vs Build 28?

Yahoo group: dxsoft
Date: 2004-06-01 00:14:35 UTC
From: L. Sica
Topic: 2465 Message: 2465

Hello Group

Can anyone tell me the difference between Build 27 and Build 28 of the AAlog Contest Module? It looks like the only thing that's changed is the AALTest2.exe file.

Thanks to all

73 de Lou AC0X

2466. Rotator control program?

Yahoo group: dxsoft
Date: 2004-06-01 00:22:11 UTC
From: L. Sica
Topic: 2466 Message: 2466

A request.....

How about a rotator control program that interfaces with AALog or AALogContest? Currently I use LPRotor, and although that works as a stand-alone, it's really meant to work with TrxManager. I'd like to see something that works with the DXSoft programs.

Now You can add you own spots to cluster window. Use Shift+Enter to
add current callsign in the new qso window and current freq. Bands
spots now sorted by freq.

2471. DTR high

Yahoo group: dxsoft
Date: 2004-06-07 06:12:33 UTC
From: Wim DeRegt
Topic: 2471 Message: 2471

Hello group

Just bought a second hand Dell Latitude 600 Laptop
with Windows XP installed. After starting up, the
system sets the DTR pin of com1 high (plus 6 Volts)
activating the PTT of my TRX. DTR is staying high
until I start one of my digital programmes (in which
Com1 has been configured). The mode command (mode com1
DTR=off) does not have any effect.
Wonder if there is a similar programme like switcher
for Com ports or any other solution?

^^^^

Hi Ray - I have several of Sergei's excellent products, and have used
them for a few years now. I don't think CWtype will help you much with
RTTY; for this you want his "TrueTTY" program.

And be sure you RTFM before hooking your computer up to your radio gear.

Cheers

2486. CwGet 1.40 is released

Yahoo group: dxsoft
Date: 2004-06-11 11:43:51 UTC
From: Sergei Podstrigailo
Topic: 2486 Message: 2486

Hello All,

I just have uploaded CwGet 1.40 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

Best regards,
Sergei

==========

CwGet Versions History.

V1.40
Documentation was updated.
Oscillogram drawing was improved, especially under Windows 2000/XP.
V1.39
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequency is shown at spectrogram by short thin line.

A one minute sound buffer was made.
The "Replay" button click makes CwType to replay previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used in CwType (V1.32 and later) to
control this sound buffer also.
V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.

OK. I can add most of this contests exclude 80m Club Championships

But note:

GB Field Day has the same rules as IARU1 Field day. You can use AATest
in this contest

For RSGB RoPoCo Contest 2004 you can use "HF starts" contest (the
differences are: the HF stars use DXCC countries as multipliers and
it's multiband contest)

2489. Hamport with FT1000MP?

Yahoo group: dxsoft
Date: 2004-06-14 13:26:03 UTC
From: Zoli Pitman
Topic: 2469 Message: 2489

Hi,

Does Hamport work with FT1000MP? I remember last year
Alexander posted a trial version which I still have
but it doesn't work for me and the latest version on
the webpage doesn't have the MP listed.

Last year I looked into AAlog as the best candidate to
replace my old trusty DOS-based logger and I really
liked it, especially the award module, but missed
USA-CA and MP CAT support. I thought to check again
because USA-CA was implemented in 2.46 I think.

The new hamport is ready. But it use OmniRig engine for comminication.
The main problem of this engine is short list of the Rig's supported.
Only Kenwood's (the best CAT interface IMHO), Some Icom's and some
Yeasu (include 1000MP).

ZP> Last year I looked into AAlog as the best candidate to

Topic: 2495 Message: 2498

Thanks Alexander.

I downloaded it and installed it, but so far, have not got it to work. I used same settings as the older Hamport (except the rig is IC-746PRO), but it is not communicating with the rig. The frequency stays set at 0.000.

I rebooted computer (Windows XP) , but nothing changed.

2499. New Hamport with MP

Yahoo group: dxsoft
Date: 2004-06-16 06:42:35 UTC
From: Zoli Pitman
Topic: 2495 Message: 2499

Hello Alexander!

I installed new Hamport and it doesn't work. I go to the
config scheme select FT1000MP and 4800/8/N/2 and change
nothing else and from then it freezes.

It freezes if I change the radio to FT1000MP. If I change
the other params it accepts them.

2504. Re: [dxsoft] Hamport with IC-746PRO

Yahoo group: dxsoft
Date: 2004-06-16 14:04:15 UTC
From: Dave NØRQ
Topic: 2495 Message: 2504

IC-746PRO with OmniRig:

I tried several different things to get it to work:
* CI-V address of 66h (which is normal for this rig)
* CI-V address of 56h (which is normal for IC-746 non-PRO), and which I had to use with old Hamport
* different baud rate settings

I verified my rig and cable are good by running other software, and it does communicate correctly with the IC-746PRO.

OmniRig keeps saying:
Status: Rig is not responding

The log from OmniRig client log showed this:

```
08:28:48.406 Omni-Rig started: Version 1.0
08:28:48.421 COM ports found: COM1,COM2,COM3,COM4,COM5
08:28:48.421 Loading commands from "TS-870.ini"
08:28:48.562 Loading commands from "TS-440.ini"
08:28:48.703 Loading commands from "Kenwood.ini"
08:28:48.843 Loading commands from "IC-756 Pro II.ini"
08:28:48.968 Loading commands from "IC-746 Pro.ini"
08:28:49.093 Loading commands from "IC-735.ini"
08:28:49.171 Loading commands from "IC-718.ini"
08:28:49.281 Loading commands from "FT-920.ini"
08:28:49.406 Loading commands from "FT-900.ini"
08:28:49.531 Loading commands from "FT-1000 MP.ini"
08:28:49.656 Loading commands from "FT-100 D.ini"
08:28:49.750 Loading commands from "Elecraft K2.ini"
08:28:49.890 RIG 1 settings: IC-746 Pro|COM1|9600|8|None|1|Hardware|Poll=500|Timeout=4000
08:28:49.906 RIG 2 settings: NONE|COM5|9600|8|None|1|Hardware|Poll=500|Timeout=4000
08:28:49.906 Starting RIG1
08:28:49.906 RIG1 sending init command: FEFE5EE01A053600FD
08:28:49.906 RIG1 data sent
08:28:49.906 RIG1 Status commands already in queue
08:28:50.468 RIG1 Status commands already in queue
08:28:51.015 RIG1 Status commands already in queue
08:28:51.562 RIG1 Status commands already in queue
08:28:52.109 RIG1 Status commands already in queue
08:28:52.656 RIG1 Status commands already in queue
08:28:53.203 RIG1 Status commands already in queue
08:28:53.750 RIG1 Status commands already in queue
08:28:53.906 Omni-Rig stopped
```

I analyzed the command being sent (FEFE5EE01A053600FD) and found that
the 5th and 6th characters "5E" were the CI-V address. This is not "correct" --
at least it is not the standard "66" (for CI-V address of 66h) for this rig.

I changed the CI-V addr on the rig to 5Eh, and IT WORKED!!!

Hamport is now functioning. I didn't test everything, but a quick check
seems to show that it is fine, including the MODE settings, which did
not work with old Hamport. This is good!!!

I would suggest changing the IC-746 PRO.ini file to change
the non-standard CI-V from "5E" (for 5Eh) to "66" (for 66h).
I thought about editing the file myself, but there are a lot
of occurrences of "5E" in the file!

Thanks & 73,

Hello Alexander,

U were right: the Flow Control was the key. When it is set
to None it works FB.

Suggested settings for MP: 4800, 8N2, No FC, 200 ms
sampling.

It's cool...

Back to testing.

Hello Alexander,
Thank you for your response. Yes, I have tried selecting modes, ssb, cw, and cw+ssb. It will see new contacts logged, just not the imported ones. The log summary is correct, shows the correct statistics on the imported qsos. But the awards manager does not see any of the imported log. Thanks for your help.
My best,
Sam

2520. TrueTTY on-aire problems

Yahoo group: dxsoft
Date: 2003-07-01 02:46:01 UTC
From: Narynbek Djunushev
Topic: 2520 Message: 2520

Dear Sergei, dear registered users of TrueTTY,

While using TrueTTY in "just PC" mode - everything is OK.

However, in "on-aire" mode some "hot-key" macroses are working well, but some other keys lead in a soft hang-up.

My rig is FT1000MP Mark V Field. Sound-card output is directly connected to "Patch".

RX is fine.

Unfortunately, currently I have to type everything manually using only one macros key F4 where just a Call-sign is programmed without any other symbols like ~[boff] , ~[ec] , de , ~[m4] , or ~[lf] .

Did anybody face such a problem?

Regards,

Bek, EX8AB

ND> but some other keys lead in a soft hang-up.

If the same keys work right with rig switched off,

a problem is radio interference from transceiver to computer and keyboard.

Use more ferrite toroids on your computer cables ...

2522. SeaTTY problems

Yahoo group: dxsoft
Date: 2004-07-05 13:12:02 UTC
From: Clair Dunn
Topic: 2522 Message: 2522

Hi,
Before I purchased SeaTTY I looked at it as well as Weather Fax 2000.

Since I only needed to capture faxes and always prefer the simple software over the complex, I chose SeaTTY and registered it.

I also use other digital modes with my soundcard -- APRS, PSK, etc. I used SeaTTY for two days almost constantly and got a nice collection of faxes, mainly from Halifax, NS. on 10.534.09.

Then one morning I switched to another radio and another interface (Signal Link) when I switched back to the radio and interface (Donner) I use for faxes, I could no longer get any pictures or charts with SeaTTY.

I spend several hours messing around with the interfaces, checking cables, trying line in mic in, etc. -- you know the drill. Nothing. I had good signals too. Then, in a fit of frustration I called up Weather Fax 2000 without making any changes from whatever I was last doing to get SeaTTY to work, and Weather Fax 2000 instantly started receiving loud and clear --

So, what is going on -- help please -- I'm not a happy camper at the moment. And, without Weather Fax 2000, I would never have known that my equipment was indeed working, just not with SeaTTY.

Thanks very much for any help from anyone -- BTW the screens are either all black or mostly black with the occasional white dot.

Clair, W1CQD

Do you see signal at spectrogram window ?

If no, select signal source and level by Windows mixer.

If yes, is it properly fit between vertical red lines ?

Check Normal/Reverse button also ...

2524. Another problem courtesy of Microsoft

Yahoo group: dxsoft
Date: 2004-07-07 00:59:09 UTC
From: Jim M.
Topic: 2524 Message: 2524

Hello Sergei,

I'm a registered user of CWGet and TrueTTY, and am a very happy customer. I recently installed Microsoft's security patches for Internet Explorer 6 and am now unable to use my soundcard at all. The message I get from CWGet and TrueTTY is "Attempted to open with an unsupported wave form audio format". The message I get from other soundcard programs is the soundcard is in use.

I checked my control panel for any exclamation points, and did a control+alt+delete to see if there are any new programs, and didn't see anything unusual. Can you point me in the right direction to fix this? I'm afraid they changed my registry or something else like that...

Thanks in advance and 73, Jim w2dsx

2526. SeaTTY 1.37 is released

Yahoo group: dxsoft
Date: 2004-07-12 11:47:15 UTC
From: Sergei Podstrigailo
Topic: 2526 Message: 2526

Hello All,

I just have uploaded SeaTTY 1.37 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei

==========

SeaTTY versions history

V1.37
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
The "Setup->Use UTC time" option was made.
V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
V1.32
FAX images are saved in PNG format now.
"M-" and "M+" buttons on the main form change preview image scale now.
V1.31
A bug was fixed. The slant correction parameter was read wrong from ini-file
if a system used comma as decimal separator.
V1.30
The documentation was updated.
Minor changes in FAX Auto Start/Auto Stop process were made.

2537. WaveClone - what number to use in CWGet .ini file

Yahoo group: dxsoft
Date: 2004-08-08 23:14:50 UTC
From: k7nhb@quickdata.com
Topic: 2537 Message: 2537

Sorry, I RTFM and have reconfigured my apps to use the *SoundCard and MixW and TrueTTY work together.

However, CWGet does not have a selection popup menu. It requires putting a parameter in an .ini file. What number do I use to specify this "mirror" sound card? The machine has two actual soundcards - one that was part of the hardware and a SoundBlaster card I put in after purchase.

Thanks,
Paul

2538. Question about WaveClone

Yahoo group: dxsoft
Date: 2004-08-08 23:02:48 UTC
From: k7nhb@quickdata.com
Topic: 2538 Message: 2538

I'm trying the WaveClone demo and maybe hit a logic (mine or author's glitch). As suggested, I was trying out the demo version and wanted to use MixW and CWGet at the same time. I selected (configured) my sound card in the WaveClone Control Panel and launched MixW - not changing anything. It worked fine.

But when I then tried CWGet, I got a soundcard in use message. As I understand it. Though I read it, it didn't protrude into my brain - do we select the sound card with the astrick or without in front of the name in each application?

Then I sort of remembered that a limitation of the demo was one host (sound card) and ONE MIRROR. If that's the case, then it difficult to try it out with multiple applications before purchase.

If anyone has successfully used this - After moving over the actual sound card in/out in the WaveClone control panel, do you have to re-configure you other apps to use the Mirror sound card or should they work just fine.

Apologies if this seems of topic but the software was introduced in this group and is gemane to DxSoft - it allow running more than one copy of TrueTTY to monitor multiple PSK31 QSO's (note, perhaps a future version will just allow multiple text windows like...that other software.

73,
Paul

kqc> the name in each application?

Yes.
To run several application if the same time, you need setup all these
application to use "mirror" sound card.

More over, all these simultaneously running application must
open sound card with the same sampling parameters (sampling frequency etc.).

kqc> Then I sort of remembered that a limitation of the demo was one host
kqc> (sound card) and ONE MIRROR.

But you don't need several _mirrors_ for one cards.
Unlimited numbers of programs (if them use the same sound parameters)
can use the same single _mirror_ .

But if, for example, one program use soundcard at 11025 Hz,
and another at 22050 Hz, them can not work together.

kqc> If that's the case, then it difficult to
kqc> try it out with multiple applications before purchase.

kqc> If anyone has successfully used this - After moving over the actual
kqc> sound card in/out in the WaveClone control panel, do you have to re-

Sergei,
Thank you
for your reply. I'll keep the same sample rate issue in mind.

Unfortunately my posts showed up inverted. That is, the post were I
got the two software programs working showed up before my question
about how to do it.

At this point I want to bring GetCW into the waveclone family and
need to know how to set the parameter in the .ini file because as far
as I know, there is no soundcard popup menu in GetCW.

If I have two hardware sound "cards" (one built-in, the other a SB
card I installed) in the machine, would the parameter for WaveClone
selection be 2 (as in 0, 1, 2) or 3 (as in 1, 2, 3) or is there
another way to tell GetCW to use the wave clone mirror?

73,
Paul

You need edit CWTYPE.INI manually.

There is SoundCardNumber parameter.
Restart CwGet after ini-file editing.

kqc> If I have two hardware sound "cards" (one built-in, the other a SB

Windows can re-number cards in different ways, so simplest way now
is to find proper number in TrueTTY setup menu.

Use number which TrueTTY shows at left of "mirrored" card name.

Surely, I will add similar sound card selector in CwGet later.

Don't ask me when :-)

Topic: 2538 Message: 2543

Sergei,
Thank you. I checked TrueTTY and see the port number should be 2 in CWGet. However, when I opened my CWget (DOS name CWGet.ini) file - which had the status (property) of Archive - I just saw seven lines of Reg Data. Datastr 1-7 and ksum. I did a search for filename cwget and computer only found that one file.

So should I uncheck Archive and does it make sense that I just have seven lines of datastr in there?

This is not what I expected when I opened that file with notepad. CWGet application works fine so it is happy with what ever it is reading.

What is the next step?

It is a right file.
Probably you didn't save your preferences yet.

Run CwGet and click on "Setup/Save Setup".
Strings with CwGet setting will be added to the file.

Sergei,
That was it! Sorry if I missed it in the documentation. Your software has worked so well when I launch it that I never Saved settings. Now I can run CWGet - the BEST CW deciphering program I've used - and have TrueTTY running at the same time - so I can jump from CW to PSK31 without having the quit and relaunch - how cool is that!! :-)

Thank you for sticking with me on this.

Alexander

I'm the guy that Durwydd (Paul S) was refering to when asking about the 2720 and t90a addition to Hamport. I've got those, plus the 718 in my shack (either fixed or mobile {grin}). If those are what you where asking to be beta for, I'm willing. Although be warned, i'm just a beginner at this (only been a Tech for a month or so now). I'm currently waiting for Paul to finish an interface box for me, which will include RTTY, PSK and CAT interface (among others). That should be done this week.

I'm waiting on his box to program my 2720 and t90 because i refuse to buy icom's cable and/or software (too many $$ they want)

2556. SeaTTY 1.39 is released

Yahoo group: dxsoft
Date: 2004-08-26 05:55:47 UTC
From: Sergei Podstrigailo
Topic: 2556 Message: 2556

Hello All,

I just have uploaded SeaTTY to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei

==========
SeaTTY versions history

V1.39
A bug was fixed. The program start was failed if setup was saved with
"OnTop" button pressed.
The "Start/Stop" button was made to start or stop message manually in
RTTY or NAVTEX mode.
V1.37
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
The "Setup->Use UTC time" option was made.
V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
V1.32
FAX images are saved in PNG format now.
"M-" and "M+" buttons on the main form change preview image scale now.
V1.31
A bug was fixed. The slant correction parameter was read wrong from ini-file
if a system used comma as decimal separator.
V1.30
The documentation was updated.
Minor changes in FAX Auto Start/Auto Stop process were made.
V1.24
"M-" and "M+" buttons was made to change image scale in the FAX receiving
window.

2560. SeaTTY 1.40 beta is published

Yahoo group: dxsoft
Date: 2004-09-08 07:23:15 UTC
From: Sergei Podstrigailo
Topic: 2560 Message: 2560

Hello All,

I got several reports that SeaTTY sometimes lost synchronization yet
(has steps shifting the image) during FAX receiving.

So I rewrote soundcard handling process to avoid this problem.

You can download newest beta-version from

http://www.dxsoft.com/seattyb.zip or
http://www.hamport.com/seattyb.zip

Please, give me feedbacks about results.

Best regards,
Sergei mailto:amx2@...
http://www.dxsoft.com

==========
SeaTTY versions history

V1.40
Soundcard handling was rewritten to avoid synchronization losses during
FAX receiving.
A number of unprocessed buffers ("UpB") is shown in the status line
in place of number of free buffers ("FrB") now.
V1.39
A bug was fixed. The program start was failed if setup was saved with
"OnTop" button pressed.
The "Start/Stop" button was made to start or stop message manually in
RTTY or NAVTEX mode.
V1.37
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
The "Setup->Use UTC time" option was made.
V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
V1.32
FAX images are saved in PNG format now.
"M-" and "M+" buttons on the main form change preview image scale now.

2563. Once more comment about synchronization lost problem in SeaTTY

Yahoo group: dxsoft
Date: 2004-09-14 14:24:24 UTC
From: Sergei Podstrigailo
Topic: 2563 Message: 2563

Hello All,

I got this feedback today from user which had lost synchronization problem in SeaTTY:

===
I tried the 1.40d issue... without success !

that's the bad news but I also got a good one : your idea to update the
sound card driver was THE good idea !

In fact I changed my driver for the issue a3.55 of realtek AC97 driver.
And the problem disapeared !!!

here is the link to the driver :
http://www.touslesdrivers.com/index.php?v_page=3&v_code=1365

===

So once more "strange problem" is a problem of bad soundcard driver ...

Best regards,
Sergei mailto:sp@...
http://www.dxsoft.com

2564. Re: [dxsoft] Once more comment about synchronization lost problem in SeaTTY

From: lsica@comcast.net
Topic: 2563 Message: 2564

Hello Sergei (and Group)
One of the major reasons this problem keeps popping up is because at one point Microsoft Update mis-identified the AC-97 sound card hardware and recommended you download an incompatible driver. Most PC users wouldn't know the difference, but TrueTTY/CWGet/SeaTTY would periodically hang. Downloading the proper driver from the manufacturer site would fix the problem, and Microsoft Update seems to indentify the sound card hardware correctly now.

2565. SeaTTY improvements for NavTex receiving

Yahoo group: dxsoft
Date: 2004-09-19 13:58:42 UTC
From: mellah bilal
Topic: 2565 Message: 2565

Dear Mr. Sergei Podstrigailo,

I'm using SeaTTY in a commercial boat, for mostly navtex broadcasts.

It is a very successful program and independent message recording
option (between ZCZCs and NNNN) is very useful. Comparing with similar
programs (such as JVComm32), decoding quality of SeaTTY is very high
and it has a very low error rate on same signal strength. It is a very
good tool and i really thank you for your great work.

For NavTex purposes, JVComm32 (http://www.jvcomm.de/indexe.html) has
additional options and i think users will be very pleased if you can
make this kind of imrpovements for SeaTTY:
1) JVComm32, analyses the four heading characters after ZCZC and
collects messages respectively. User can select and review recorded
messages by their subjects, broadcasting stations and bcst-date-time. For
emulating a commercial NavTex equipment, program should filter or
select for view messages by their origins or types.
2) As you know, coast stations repeat their same messages with same
consecutive message numbers periodically. For example, a military
exercise or a light message usually lasts for weeks and a station
sends its message 6 times a day. Repeatedly records of same messages
are filling inbox and an ID-filter may be useful for users.
3) JVComm32 has also internal NavArea information and it can list
broadcasting stations with their names.

SeaTTY is a very good alternative to stand-alone Navtex equipments which are
- difficult to programming.
- using thermal paper for records and programming steps.
- hard to find their recording papers at sea.
- commonly have internal 518 kHz receivers and can not receive 490 kHz (National Frqs)
- have no spare recording/receiving option on-board.

Similar programs can not receive Navtex messages clearly as SeaTTY, so
although you may not plan this kind improvements, i will continue to
using it with pleasure.

Thank you again and please share your intentions on your improvement plans with us.

2566. CWget and AAlog contest module

Yahoo group: dxsoft
Date: 2004-09-19 19:23:54 UTC
From: sm5uiu
Topic: 2566 Message: 2566

I posted a couple of notes on the DXSOFT site just before I was aware of this group.

1. CWGet character set. When defining own char set with the scandinavian letters they dont show up like they do in the text editor. Proboably? Beause cwget has its own internal charset?

2. AALog contest module, SAC, does not work for scandinavians, othervise ok.

As a scandinavian station I get 2 points for contatcts with NON european stations and 3 points for EU stations, it should be otherway around. I get no multipliers at all, doesnt mater if I make contact with Europe of DX.

Then again, it realy doesnt matter since when I send in my log, the contest manager will use specific software to recalculate all points. But it would be nice it it worked anyway...

See links below for more info:

Another thing I noted was that sometimes I forgot to change the band setting in AAtest so I logged some on the wrong "band", but that was easily corrected.

However, then I tried hamport so that It would take care of all the bandchanges (IC746). When i start AAtest and activate use hamport I get following message. Access violation 001eef93 in module aatest.exe read of adress 00000308. I use winxp and I have tried several combinations. Hamport, HamportOmni and updated the omnirig soft to v1.2 and still same messages... however hamport works stand alone ok.

s> several combinations. Hamport, HamportOmni and updated the omnirig
s> soft to v1.2 and still same messages... however hamport works stand
s> alone ok.
If you can please try this steps:

Download OmniRig (new engine for hamport)
http://www.dxatlas.com/omnirig/OmniRigSetup.exe

Install it.

Download new version of hamport
http://www.dxsoft.com/download/hamport099.zip

Unzip it in any folder and run hamport.exe.
Configure you rig.

NOTE! You need switch OFF Transceive mode on the TRX in it's menu.

Then try hamport with AATest.

Thank you.

Best regards,
Alexander mailto:aia@...

Yahoo group: dxsoft
Date: 2004-09-23 03:07:07 UTC
From: ve7dxh
Topic: 272 Message: 2577

I just recently downloaded the contest module.Apparently this

will allow set up for many of the RTTY contests.

I downloaded and placed it in the same directory as AALog.

My problem is that I don't find any reference to contests in the

AALog set.

Am I overlooking the obvious?

Would appreciate any help from anyone.

Thanks de ve7dxh Garnie email ve7.dxh@...

You need run AALTest.exe file. It has list of conetests. After contest
you can import data into main log

2581. How do I send Prosigns AR and SK in CW Type?

Yahoo group: dxsoft
Date: 2004-09-24 08:43:48 UTC
From: k7nhb@quickdata.com
Topic: 2581 Message: 2581

If info on sending prosigns AR, SK or others (ES, etc.) are in the documentation, where do I find it. Some progams interpret characters like "<" and such. How does CW type send prosigns?

Thanks,
73
Paul

PS: In a new install I must have wiped out my original, WORKING, .ini file. I had a long "help me" post ready with my current (apparently default) .ini file. But I read the configuration data at http://www.qsl.net/wm2u/cw_config.html and got going again.

In the process of checking things out - I downloaded the MRP40 demo and it started working with just two menu choices (Com2 and DTR). I hope someday CWGet and CWType will become one program and configure just as smoothly.

CwType do the same :-)

Just try to press all punctuation keys.
If you don't like default key to prosigns mapping, you
can "User defined charset" file ...

2591. Can Hear

Yahoo group: dxsoft
Date: 2004-09-30 08:42:26 UTC
From: Rtnmi
Topic: 2591 Message: 2591

I just downloaded and installed CWGET on my Toshiba Satellite Pro Laptop WIN98SE Genuine Intel Pentium 40 MB RAM. I work an ICOM 730. I made a up a jumper from the 1/4" jack on my rig to the laptop microphone input.

I hear the audio fine until I start CWGET. Then the audio goes dead (in RX). If I put CWGET into "TX" then the audio comes back.

I opened the record properties on my audio device driver (ES688) and noticed that CWGET seems to be recording something when in receive. Then in transmit the recording stops and I can hear the signal; out of my speaker from the laptop.

I think I have looked at all settings within CWGET but still can't find out why my rig and my laptop will receive ok but CWGET won't show me the audio.

Anyone have any ideas how I can fix this - it must be just a simple adjustment, it always is after I have just spent 4.5 hours trying to troubleshoot it and finally give up.

Tnx,
Rob

Do you have line-in input ?
If not, you probably need to add attenuator to reduce output level.

R> I hear the audio fine until I start CWGET.

Do you hear audio where? (From which source.)

R> Then the audio goes dead (in RX).
R> If I put CWGET into "TX" then the audio comes back.

??? What do you mean?
CwGet can not transmit at all.

R> I opened the record properties on my audio device driver (ES688) and noticed
R> that CWGET seems to be recording something when in receive.

Surely CwGet use input of soundcard, that is "recording".

R> Then in transmit
R> the recording stops and I can hear the signal; out of my speaker from the
R> laptop.

It is strange.
If you have enabled mic input in "Playback" option,
mic input just goes to output without sound card handling.

R> I think I have looked at all settings within CWGET but still can't find out
R> why my rig and my laptop will receive ok but CWGET won't show me the audio.

To hear sound, you need setup "Playback" options.
For CwGet you need setup "Recording" options.

R> Anyone have any ideas how I can fix this - it must be just a simple

Topic: 2591 Message: 2593

No I mean I had the same problem with both programs and it was *tooooo late last night* to totally type the same email so I cut and paste it and changed the name from MIXW2 to CWGET, so as to target this list as well with the same issue and get an answer to the problem.

With that I will say that I could really use some help on the issue at hand if anyone knows technically what I could do to resolve it. I certainly didn't spend 4.5 hours exactly on either program - unless of course you consider that I am no a dialup machine and it took quite a while to download both programs.

I don't know why I am discussing how long I was troubleshooting the issue - just for clarity let me restate the *real issue* again: Of course now that I have sent the message over again and again copied and pasted it - the times may be inaccurate, but the problem is the same.

I just downloaded and installed CWGET on my Toshiba Satellite Pro Laptop WIN98SE Genuine Intel Pentium 40 MB RAM. I work an ICOM 730. I made a up a jumper from the 1/4" jack on my rig to the laptop microphone input.

I hear the audio fine until I start CWGET. Then the audio goes dead (in RX). If I put CWGET into "TX" then the audio comes back.

From: Rtnmi
Topic: 2594 Message: 2594

Dick your a genius!!!

I found the problem this afternoon around 6pm it was in the audio properties
just like you said.

There is an option in the driver for the record settings to feedback the
audio or not. I never looked at it because to me if I am going to do
recording I *certainly* want to monitor the source. Now MIXW2 and CWGET work
just fine on the laptop.

Let's see now there goes that word again:
ASSUME
NASTY WORD :0(

Tnx,
Rob

Rob, I would suggest that you play with your sound card settings. I
don't know where to tell you start, because all of the headings in the
sound card controls are somewhat different. I had a similar problem and
got it corrected when I did the sound card routine.

Good Luck,

Dick - WB0DUL

2595. Error in AAlog contest with Hamport

Yahoo group: dxsoft
Date: 2004-10-03 04:07:34 UTC
From: L. Sica
Topic: 2595 Message: 2595

I've installed a fresh version of AAlog Contest (Beta 30) along with a fresh version of Hamlog Omni port (version .99). When I launch the newly installed AAlog Contest, everything looks fine, I get the menu bar. But when I choose "Use Hamport for Trx commumication" from the Config menu. Hamport launches, but I then get bombarded by repeated and repeated error windows, all saying "Access violation at address 001EEF93 in module AALTest2.exe. Read of address 00000308"

Any help anyone has would be appreciated. Thanks to all

Lou Sica AC0X

2596. Fwd: Error in AAlog contest with Hamport

Yahoo group: dxsoft
Date: 2004-10-05 14:57:55 UTC
From: lou_sica
Topic: 2596 Message: 2596

Further testing shows

This problem occurs with AAlog Contest Beta 30 along with either HamPort Omnirig OR Hamport (older version)

This problem occurs with the above programs even on a computer that has never had either program installed on it before

This problem DOES NOT occur (with either version of Hamport) with AALog Contest Beta 28 (I don't have 29 here to test)

So it looks like it's something with AAlog Contest Beta 30 (or maybe 29)

l> AALog Contest Beta 28 (I don't have 29 here to test)

l> So it looks like it's something with AAlog Contest Beta 30 (or maybe
l> 29)

I need change data exchange with Hamport. New versions of Contest
module need new hamport version.

http://www.dxsoft.com/download/hamport099.zip

But AALog 2.46 use old version of hamport (SRI). 2.47 will be uploaded
before week end and will use the same Hamport

Best regards,
Alexander mailto:aia@...

Hi Alex

I'm not sure what you mean here. AAlog Contest Build 30 Beta fails when I try Hamport (old version), or Hamport Omnirig.

2599. My Hard Drive Crashed

Yahoo group: dxsoft
Date: 2004-10-07 01:08:36 UTC
From: Rtnmi
Topic: 2599 Message: 2599

BlankHello Fellow Hams:

Please help.

Some of you had sent me some emails answering questions and so forth not too long ago.

Since then my hard drive has crashed, I lost all of my favorites and all of my email along with about 7 gigs in a document folder over 3 years worth of work.

Your emails were very helpful and I would like to be able to recover them so that I can read them off line and save them for future reference. I am needing you to please resend them if you would. I am trying to recover all of the information that was lost in the crash.

Thank you,
Robert L Autry

2600. AAlog Contest Beta 30/Hamport (Omni rig) 0.99

Yahoo group: dxsoft
Date: 2004-10-07 03:11:14 UTC
From: L. Sica
Topic: 2600 Message: 2600

To Alex

Thank you for that version of Hamport! No more errors with AAlog Contest Beta 30!

Just one (teeeny) problem....

Hamport Omni reports RTTY mode as "Digi", which AALog Contest doesn't recognize as RTTY. I get message at the bottom of the QSO window "Wrong mode for TRX" when the rig is in RTTY mode.

Thanks again, and 73 de Lou AC0X

2601. SeaTTY 1.50 is released

Yahoo group: dxsoft
Date: 2004-10-07 14:09:19 UTC
From: Sergei Podstrigailo
Topic: 2601 Message: 2601

Hello All,

I just have uploaded SeaTTY 1.50 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Best regards,
Sergei

==========
SeaTTY versions history

V1.50
The documentation was updated. Some minor bugs were fixed.
V1.40
Soundcard handling was rewritten to avoid synchronization losses during
FAX receiving.
A number of unprocessed buffers ("UpB") is shown in the status line
in place of number of free buffers ("FrB") now.
V1.39
A bug was fixed. The program start was failed if setup was saved with
"OnTop" button pressed.
The "Start/Stop" button was made to start or stop message manually in
RTTY or NAVTEX mode.
V1.37
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
The "Setup->Use UTC time" option was made.
V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
V1.32
FAX images are saved in PNG format now.
"M-" and "M+" buttons on the main form change preview image scale now.
[...]

2603. TrueTTY 2.37 is released

Yahoo group: dxsoft
Date: 2004-10-18 15:17:35 UTC
From: Sergei Podstrigailo
Topic: 2603 Message: 2603

Hello All,

I just have uploaded TrueTTY 2.37 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

Your feedbacks are very welcome!

Best regards,
Sergei

==========

TrueTTY Versions History

V2.37
The documentation was updated.
Some minor improvements were made, some minor bugs were fixed.
V2.36
A one minute sound buffer was made.
The "Replay" button click makes TrueTTY to re-decode previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used also:
~[rpNN] - to replay last NN seconds;
~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
V2.35
BPSK-63 mode receiving and transmitting were made.
V2.34
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
Input and output sound devices can be selected in "Setup/Interface" menu
separately now. Not only device numbers, but device names are shown there
now.
V2.33
The documentation was updated.
AX25 software carrier detector was slightly improved.
V2.32
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram and "waterfall" now.
To move a visible part of spectrogram or "waterfall" to left or right

drag it by mouse with Alt key down.
A frequency ruler was made.
The Alt-I hotkey switches the phase indicator on and off in PSK modes now.
V2.31
TrueTTY can decode AMTOR-ARQ (SITOR-A) now.
V2.30
"State" and "IOTA" fields was added to catch-word popup menu.
"State", "Grid" and "IOTA" options was added to
"Setup / Text / Use "Other" field as" menu.
TrueTTY can send information about used mode to logger now.
See "Setup / Other / Send Mode to logger when mode was changed" ,
"Setup / Other / Send Mode to logger together with callsign" and
"Setup / Other / Send mode ... as ..." options.
V2.26
Fast squelch in AX25 mode was made.
V2.25
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequencies are shown at spectrogram or waterfall by short thin lines.
V2.24
MultiFSK decoder was improved.
V2.23
AX25 decoder was rewritten.
Noise-immunity was great improved in HF-PACKET and
slightly improved in UHF-PACKET.

2605. Rescan logset very slow

Yahoo group: dxsoft
Date: 2004-11-01 14:31:15 UTC
From: Dave Dunbar
Topic: 2605 Message: 2605

I have AALog, have been using it for 3 years, and like it. I have just over 7000 QSOs in the log file, but when I do a Rescan log set function, it takes a LONG time for it to complete. Just this morning, it took 45 minutes. Nothing else was running that takes significant CPU time, and I'm running a 2.2GHz Pentium with 512M memory and WinXP. Should it take that long, or is something wrong? Thanks, Dave N0RQ

2606. log corrupted

Yahoo group: dxsoft
Date: 2004-11-02 13:07:26 UTC
From: ra9frd
Topic: 2606 Message: 2606

Hello! once sitting in my tiny shack looking for next RDA numer,
suddenly mains goes off. After powering up my PC i found that my
AAlog database file become currupted - won't open. I had a backup
copy (3 months old) and start AAlog once again - everything OK, but
i loose some nice records in my log. After revising corrupted files
in text viewer, i found what can extract and recover everything from
DB, except date of QSO. So question to Alex, author of AAlog, is it
possible to recover dates from files? Can you help recover corrupted
file (i'm shure, that problem was only whith file closure, maybe few
bytes are lost with mains...)
Except what case AAlog very reliable, i've managed several power
lost situations, after what AAlog transparently recover himself.

GL keep power in mains :-) de ra9frd (PM-07 for RDA award)

2612. Re: [dxsoft] CW Type/Gameport interface

Yahoo group: dxsoft
Date: 2004-11-04 19:46:54 UTC
From: Sergei Podstrigailo
Topic: 2609 Message: 2612

Hello David,

Thursday, November 4, 2004, you wrote:

DN> How do I interface my cw paddle with the computer gameport?

As described in documentation:

Another group of CWTYPE.INI parameters defines a method of paddle using.
Example is shown below:
DotPort=201
DotXorMask=FF
DotAndMask=10
DashPort=201
DashXorMask=FF
DashAndMask=20

[...]
The above given example corresponds to the paddle with normal open contacts connected to the joystick
connector ("dot" - pin 2 of plug, "dash" - pin 7, "common" - pin 5).

Best regards,
Sergei mailto:sp@...

From: k7nhb@quickdata.com
Topic: 2613 Message: 2613

I went though the pages to order WaveClone but I didn't see anywhere to enter the discount code because I own DXSoft products. I thought there might be a comments field, or a "discount/coupon number" field but I got right down to the submit button and cancelled because the text said my card would be charged for the full amount.

Is there still a discount and if so, how much?

Thank you.
73,
Paul

Hi:

I did not fine one for AALOG either.

I have CW GET and AALOG. I got the GET registered with no problem. I have yet to register the AALOG, I copy the Key file into the AALOG program, but it still keeps coming up Unregistered. In addition I have yet discovered how to make an entery into my Log, I call it General Log. It always says the log is closed.

Any help would be helpful.

2621. Re: [dxsoft] AALog --ADIF Export Error

Yahoo group: dxsoft
Date: 2004-11-07 13:04:12 UTC
From: Raymond Phillips
Topic: 2616 Message: 2621

Hello Alexander
When I export the log I have found
that it stops at a certain qso.If I bypass that qso
all is ok not sure why I get the I/O error on the qso
nothing looks out off place in the contact that is
logged.

2623. Basic setup of CWtype requied

Yahoo group: dxsoft
Date: 2004-11-12 17:24:28 UTC
From: Karel Ebenstreit
Topic: 2623 Message: 2623

Gentlemen, can anyone send me basic set-up information required to run "CWtype"?
I have it for a while, but I am unable to make it work.
I have Kenwood TS870S, Rigblaster plus and MFJ-490 keyer. "CWget" works OK and I can send out CW via keyer using VOX, but I can not send out via keyboard.
Any advice is appreciated. Thanks, Karel, VA3KO

KE> I have it for a while, but I am unable to make it work.
KE> I have Kenwood TS870S, Rigblaster plus and MFJ-490 keyer.

Just edit CWTYPE.INI as described in help-file (with KeyPortType=2).

KE> "CWget" works OK
KE> and I can send out CW via keyer using VOX, but I can not send out via
KE> keyboard.

Why VOX ???
Transceiver must be in CW mode, not SSB!

Best regards,
Sergei mailto:amx2@...

2628. Re: [dxsoft] Basic setup of CWtype requied

Yahoo group: dxsoft
Date: 2004-11-12 20:50:34 UTC
From: Karel Ebenstreit
Topic: 2623 Message: 2628

Hello Sergei, thanks, I typed this info into ini file, same result, radio does not seem to transmit when typing and sending via CWtype..
With reference to VOX, when I use my keyer,in CW I must press VOX in order to transmit CW out on my TS870.
When I send CW with my keyer, I see the transmit lights to flash as I send CW.

But when I use CWtype and type in the message, then press TX, red light comes on the CWtype window, message seems to be sent, but no transmit light on the radio.
Is there still something I am missing? Maybe reboot again with .ini file changed?
regards,
Karel, VA3KO.

KE> open error!".

It means that you didn't set KeyPortNumber value properly.
This value defines used COM-port.

You'd better read help-file completely at first ...

KE> I am not sure what TrueTTY has to do with this program...

Oops, it is just my error in message, thank you for info .

Hello Sergei, thanks, I read your help completely, but I did not find any positive information on what to do to get my radio transmitting.
You gave a simple diagram for connection of radio to the sound card, one for parallel and one for com port.
Do I have to build one of these to test if your software transmits?
I thought that I bought Rigblaster for that.
But when I read the RIGblaster manual, it tells me that I should not go any further in their manual until the software that I am using will transmit.
Now this is a really chicken and egg situation. How do I get out of it?
Your "Help" describes: "Connecting computer with a transceiver and the program set-up" using some examples of a circuit to build. Would it be difficult to add info on how to do it using RIGBlaster, since your software comes with the RIGBlaster if I remember correctly.
Should I get rid of RIGBlaster and build my own interface?
Information as:"Please read the HELP" somehow does not work in this case. Or I must be missing something. Thanks very much for your help. It is really appreciated.
Karel, VA3KO

KE> Do I have to build one of these to test if your software transmits?
KE> I thought that I bought Rigblaster for that.

You need setup Rigblaster Plus to use RTS COM-port pin for PTT and DTR pin for CW-IN
(As described in RigBlaster Plus documentation. I have not it.)

Then edit CWTYPE.INI file.

If you use RigBlaster+ with COM1, right values are:

KeyPortType=2
KeyPortNumber=1
KeyOffTxOffByte=00
KeyOnTxOffByte=01
KeyOffTxOnByte=02
KeyOnTxOnByte=03

If you use COM2, use KeyPortNumber=2 value .

You must restart CwType after CWTYPE.INI editing ...

Best regards,
Sergei mailto:amx2@...

From: Karel Ebenstreit
Topic: 2623 Message: 2633

Hello Sergei, thanks very much,
I was getting desperate, but it seems that I finally solved it now.
I opened rigblaster, checked the P5 jumpers, they were in a default mode as it came new. That was OK as required per your comment.
I changed keyport numbers for com 1 as below (by the way please add this same explanation in your HELP, it is much clearer then the way you have it there now).
Then I found that my radio would not go into transmit after I plugged radio speaker output into the sound card line in, beats me why, because after fiddling with that connection, radio started to transmit when PTT by mic.
And then when I restarted CWtype - suddenly everything works. Now when I press TX, the red light on the radio goes red, and I am happy.
I believe that my problem was mainly in that radio speaker to sound card line-in connection
plus the wrong keyport numbers.
Thanks again for your help.

Karel, VA3KO

Hello Sergei again,
sorry for so many questions, I still have one minor problem that I am not sure how to solve.
I wonder if you would know what causes the continuous tone heard on the speakers when I try to connect 'key out' of the Rigblaster to 'key in' on the radio.
I believe this connection is required to send CW out. Is it?
Thanks again, Karel, VA3KO

Hello Sergei, finally I have everything working now, and I made nice qso
with KB5KPD little while ago.
My problem was in using 1/8" mono plug for the radio key in to rigblaster
key out, I replaced it with stereo and all works now OK!!!
The mono plug was grounding it the wrong way, you were right.
Thanks again for all your timely help.
Sincerely, Karel, VA3KO\

From: Arrmand
Topic: 2637 Message: 2637

Hi every one, its nice to join you all here, I have little experince with all radio stuff and computers. but so look forward to learning all that there is.

I do have a small scanner, which is not bad but then again, the bug has finaly bitten, and am planning my next one :)

I will try to give to the group as well as learn, I think I will be learning for sometime yet, there is so much to learn.

Hope to see ya all in the coming months/years.

Happy scanning.

Hi Arrmond,
Well I am sure that all of us will agree that we all at one point in time have been bitten. Welcome aboard and injoy the ride, it is one of the few bugs that when they bite it can bring happyness and move you beyond your bounds. Good luck and most of all have fun and keep moving up the ladder of learning.

2639. SeaTTY and new NavtMsgs

Yahoo group: dxsoft
Date: 2004-12-04 09:41:46 UTC
From: roger.proust
Topic: 2639 Message: 2639

Hello Sergei,

I am always a fan of SeaTTY that I always use in mediterannean seas with NavtMsgs of Gerard Hageman for almost 3 years.

SeaTTY has an excellent decoder for Fax, RTTY, and NAVTEX, I thinck the best.....
NavtMsgs (see below the new features) is a freeware complementary (remote control of the receiver, advanced message viewer, plotting on a chart MTO Synop messages, updated broadcasting schedule, Audio recorder ...) of SeaTTY.These two associated softwares are indispensable for all the sailors who want to have always a good and updated MTO situation.

Many french men are very interesting by SeaTTY and NavtMsg. Sergeil do you intend, one day, to translate in french your very excellent SeaTTY ?

Thanck you
Best greatings

Roger Proust
France

PS :
Here is below the new features of NavtMsgs of Gerard Hageman :

Version 2.0 of Novenber 2004
NavtMessages improved

download from http:/home.planet.nl/~hagem358

NavtMessages got some new features
NavtMsgs and NavtSyn have been re-written in Visual Basic 6.0. This created the oportunity to improve the communication with SeaTTY. SeaTTY can now be stopped from NavtMsgs.

Simpler operation
Selecting a mode and calling SeaTTY and (in case of mode Synop) NavtSyn now is done by pressing only one menu item.

Receiver remote control
A routine for remote control of the receiver has been added. Clicking a station is all that has to be done to prepare both the receiver and NavtMsgs for receiving.
(For remote controllable receivers only)

Message viewing simplified
There is no logbook anymore. All messages are saved on disk and available for viewing. Setting stations and message categories remained the same, but selection now is not done before you start viewing. You can change selection criteria any moment.

Help is easier to access
In-program help gives compact, on-the-spot directions for use.

Quick Help supplies information on how to start, how to receive the different modes and how to tune the receiver. There are a search option and links to details and related subjects. Advanced Info gives backgrounds.
Broadcasting schedules are still available and actualized.

Synop: one chart, 4 scales
Synop now has only one chart of the Northern Atlantic, which can easily be enlarged to 1.4 x, 2 x and 3x. Select the part you need by scrolling. Settings remain the same each new call.

Synop decoding improved
More files with incomplete identification lines can now pass the pre-selection.

Audio recorder added
There is a simple audio recorder. Very practical when receiving weather bulletins in (quick) speech.

Utilities
Utilities for editing mesages and stations lists are added. There is also a viewer for taking a look in the stations data base.

download from http:/home.planet.nl/~hagem358

2645. Database

Yahoo group: dxsoft
Date: 2004-12-11 20:59:56 UTC
From: Jeff Popa
Topic: 2645 Message: 2645

I know this is a moderated group. When I tried to post a message, it had to be approved by the moderator before it was placed. Knowing that, how to all of the sexually oriented posts get on the database portion of this group? Do the moderators read them then post them or do they not read them. I have nothing against the postings, but it is a bummer to sort through them to find if there is anything new in the database section. Just thought I'd mention it. Jeff

2646. AAlog version 2.43

Yahoo group: dxsoft
Date: 2004-12-12 04:16:52 UTC
From: L. Sica
Topic: 2646 Message: 2646

Some questions about AAlog 2.46

1) If I import a log from another program (using ADIF), does it preserve the country data from the old log, or does it try to calculate it's own country data based on prefix?

2) Does it work with VE3NEA's new Band Master Program?

3) Does it do rotator control?

2647. Registration

Yahoo group: dxsoft

From: Jeff Popa
Topic: 1955 Message: 2647

Hello all, just a quick question. I noticed that on the PC screen, it says "paste registration
number here". I downloaded the software to my Powerbook and then, after burning the CD, loaded it onto my PC. If I register online with my Apple, will I get a registration number that I can type into that slot on my PC to add the registration number so I can use all the functions? I can't get online with the PC and if they send the registration number online, it will be on the APPLE not the PC. Thanks for the help, and I know that is a confusing post, but tried to explain as best I could. Jeff WB8QYT

2650. ADIF file for LoTW

Yahoo group: dxsoft
Date: 2004-12-12 07:31:30 UTC
From: Adhi YC3MM
Topic: 2650 Message: 2650

Hi,

I am trying to use AAlog ver 2.44
I have a little problem here.
I do not know whether this is AAlog's problem or ARRL's problem.
When I made QSOs in PSK31 mode, and exported to ADIF file,
the program TrustedQSL (for ARRL's LoTW) cannot read it
because in AAlog's ADIF file mentioned
<MODE:3>PSK
and I should edit all PSK mode QSO become
<MODE:5>PSK31
to be able to read by TrustedQSL.

Maybe do you have any better method to convert PSK to PSK31
or will you change mode "PSK" become "PSK31"?

Adhi YC3MM

2651. [dxsoft] PSK

Yahoo group: dxsoft
Date: 2004-12-12 09:51:24 UTC
From: Dale Pausinga
Topic: 1955 Message: 2651

Next weekend there is a PSK31 PSK63 Death Match put on by the Michigan DX
Asscoceation. The log does not make a distinction between the two modes.
On of the rules is you have to electronically upload your log to the ARRL
LoTW and to MDXA
The link to their web page is http://www.mdxa1.org click on the Death Match
link at
the top of page for the rules.
Can this be fixed so I can use AALog and Truetty and not have to switch to
MixW for the contest. I have all my macros set and ready to go. Thank you
for your time.

YC3MM de WB5NZP

Adhi, I also had the same problem with AALoger and had to change all the PSK modes to PSK31 after I edited the text file (mode.aal). This file is a text file and can be edited with notepad or MS Word. I looked on LOTW to see what the modes were and how they were entered, then changed (mode.aal) accordingly. I have not had any problem with LOTW uploads since then.

I hope this helps, its the correct information, and I have explained right.

I found and fixed it so it works. I went to modes.aal and changed PSK=599
to PSK31=599
PSK63=599
Then I went to Truetty and edited TRUTTY.INI were it says Bpsk31As=PSK to
Bpsk31As=PSK31 and the same thing for PSK63 Bpsk63As=PSK63
Works great now.

From: Dave NØRQ (lists)
Topic: 2657 Message: 2659

I backed up the old version, and installed the new.
Now, when I start AALOG, I get many boxes that pop up, all saying the same thing:

Access violation at address 006236B0 in module 'aalog2.exe'. Write of address 403C7985.

Eventually, they stop, or I have to force AALOG out with Taskmgr.

I rebooted and tried again, but the same thing occurs. I am running WinXP SP2.
I never saw this with 2.46 of AALOG.

2662. Re: [dxsoft] ADIF file for LoTW

Yahoo group: dxsoft
Date: 2004-12-12 20:51:06 UTC
From: Dave NØRQ (lists)
Topic: 2650 Message: 2662

Another option is to change your LOTW software (called TSQL) setup.
Under File, Preferences, there is an ADIF Modes tab. Go there,
and Add PSK --> PSK31. This will automatically change any LOTW
records to PSK31 if they are coded as PSK in your log.

The better long-term solution is, of course, to edit modes.aal
and add PSK31 (and PSK63, and others if you use them).

www.dxsoft.com/hamportomni.exe is the correct spelling.

It fixed my Hamport-gone-wild problem. It doesn't seem to recognize RTTY mode on the rig completely, but it does work.

Hi Alexander:

Yes especially to AALog but the other programs as well.

I want to know so that when I do my installations and evaluations to include in my blog on my website at http://www.qsl.net/ke5cty , I will have the procedure down pat and can pass it on in the blog post to all the others as well.

I will be including a link to the software (your site), a short eval and in the download section any write-ups or presentations of the software you would like to include as well.

Also if you have any thing like an intro or presentation to AALog or the others you would like to include before I do my posting let me know or email it to me and I will include it in the post also.

TNX,
BOB

From: k7nhb@quickdata.com
Topic: 2675 Message: 2675

I tried to install AALog 2.4.7 as directed - overwriting what was
already there. I see three curiosities:
1) The splash screen still says 2.4.6
2) The Properies of the .exe show the version as 2.4.2
3) When I launch the application my previous log entries are gone. I
get an empty log window.

What is wrong with this picture? Are my previous log entries lost forever?

73,
Paul

I installed into a new folder.
Now the Splash Screen says 2.4.7
The Properties of the .exe is still 2.4.2
On launch the app asks for a registration code I had copied the
log.key file into the new folder
Still looking for my previous logged QSO's.
Any advice appreciated.

You overwrite your configuration. You need recreate your logs in the
AALog list.
Find your log files in the old "\logs" folder copy into the new one.

Press Ctrl+N, and create log like new but select file with your old
log

How do I install the AALog Contest module?

I downloaded it and extracted it, but I don't see an install shield for it in the extract - only the program files. I looked for a readme.txt or an install.txt but could not find one and there is nothing on the website telling me how to install it.

Do I simply copy the files into the main program folder or do I need to make one for it?

You are right. I now see the upgrade file below the New Install
download options.

Because I have installed "new" over my old files, have I destroyed my
previous log book?

Do I need a new Key or can I use the one I had for the previous
version (I'm sure I saved the email when it was sent to me)?

Sorry for the trouble. Now I know to look for the Upgrade download.

You have aalog.key as attach in the message. Slect message with
key-file in the lis then go to File-Save attachments menu and in the
dialog box select folder where AALog installed (c:\program files\AALog2
by default). Then press save button.

RP> Also I have not been able to open a LOG File, can you tell me how to do
RP> that.
Do you create new log? To create log press Ctrl+N and enter name for
database file, description of the log and other data.

2688. CW Get

Yahoo group: dxsoft
Date: 2004-12-22 00:14:59 UTC
From: Damian Kamm
Topic: 2688 Message: 2688

I've been playing with GetCW by SergeiPodstrigailo,UA9OV it's a great program if you're not very good at fast CW, like me. But trying to log any info
received appears not easy.

GetCW can cut and paste easily to it's sister program TypeCW (similar to the
CW Machine in Logger32) and also to it's logging partner 'AAlog' but does not
easily paste callsigns and names across to other logging software although it is
possible. Also TypeCW is not anyway near as easy to use as L'32 and does not log the call (except with AALog as the Logging program).

Anyway I found after downloading 'Clipboard Magic' by Cyber-Matrix.com (freeware) I am now able to paste each keyword to the visible clipboard that will show upto 26 words (ie callsign, rst, QTH, name qsl-via etc) while reading the incoming CW at speed and transfer it from this visible clipboard to the logger32 Operator/window as and when I feel ready to do so prior to transmitting with Logger32's CW machine. This makes life a lot easier than trying to type in or cut/paste the individual callsign, name etc direct from the GetCW receive window.

regards

Damian M0BKV

Topic: 2675 Message: 2689

Alexander,

Others used my topic for their questions so I never got an answer from you about what to do next. I am trying to recover my previous log files after I confused things by downloading the New ver 2.4.7 AALog instead of the Update AALog file.

My current situation is:
I can open ver 2.4.7 as registered but I see a log.key file and my aalog.key file in the folder. Do I need the log.key file? I don't see a log.key file in the folder the version 2.4.6 was in.

In the folder that holds version 2.4.6 I have a logs folder and it contains Pauls.db, Pauls.MB, Pauls.PX and Pauls.XG0 through Pauls.XG6, then Pauls.YG0 through Pauls.YG6. I also see aalogbackup.exe.

In version 2.4.7 I created a new Log called K7NHB.log Though it is empty, it has the same file types as those in the Version 2.4.6 folder. If I replace the K7NHB log files with the Pauls log files from the pervious version, will AALOG 2.4.7 give me my old log entries back?

If so, I'll be back in good status and will forever remember to use the update files instead of the New Install files.

73,
Paul

PS: You may want to update your developement version parameter. When I check the properties of the AALog.exe file, the version number still says 2.4.2 for both version 2.4.6 and version 2.4.7

I have 2 loges. When I had one log if I pressed the previous contact button It would bring up a window showing me the contacts I had made. Now that I have my main log and my contest log it just turns the Call sign window pink. Am I doing something wrong that I can not see the previous contact window anymore. It is something I use a lot. I am using version 2.47. Thank you.

Hello k7nhb,

Thursday, December 23, 2004 , you wrote to me:

kqc> In the folder that holds version 2.4.6 I have a logs folder and it
kqc> contains Pauls.db, Pauls.MB, Pauls.PX and Pauls.XG0 through Pauls.XG6,
kqc> then Pauls.YG0 through Pauls.YG6. I also see aalogbackup.exe.

kqc> In version 2.4.7 I created a new Log called K7NHB.log Though it is
kqc> empty, it has the same file types as those in the Version 2.4.6
kqc> folder. If I replace the K7NHB log files with the Pauls log files from
kqc> the pervious version, will AALOG 2.4.7 give me my old log entries back?
Yes. If you rename pauls.* to k7nhb.* you will see your contacts.
Another way is select tools|merge another log and select Pauls.db file
in the dialog window

kqc> If so, I'll be back in good status and will forever remember to use
kqc> the update files instead of the New Install files.

Best regards,
Alexander mailto:aia@...

2694. AALog and DX Atlas

Yahoo group: dxsoft
Date: 2005-01-02 17:02:22 UTC
From: David Nigel Crossley
Topic: 2694 Message: 2694

I have AAlog version 2.47.
When I take-in data from TrueTTY, it transfers it nicely into AALog and when the latter is linked to DX Atlas, the station is identified as being at the capital city of that particular country (ie Paris, Stockholm, London etc). However, when I transfer the Grid location, the station position as shown on DX Atlas does not move. The only way to ensure that it moves to the correct location based on the locator information, is to delete the last letter of the locator (in the NEW QSO dialogue box of AALog) and then type it in again. This result is that the station location is then correctly placed on DX Atlas.
Is this a bug?
Cheers: Nigel G6BIT

2697. Reset QSL printed flag

Yahoo group: dxsoft
Date: 2005-01-04 14:46:19 UTC
From: Paul Beringer
Topic: 2697 Message: 2697

Is there a way to reset the "QSL printed" flag? I printed a bunch of QSL labels on regular paper to check them. I want to re-print them on label paper now and I can't because the "Add to QSL label queue" button is greyed out. I am using version 2.46.

Actually this all started out when I upgraded to this version. I had a lot of existing QSL labels in the queue. After upgrading to version 2.46 I added some more to the queue. When I did a "Print preview" of the labels, there were a bunch of labels with missing qsl information. Somehow the queue got messed up and the labels previously sent to the queue under the older version were missing the QSO info. The labels sent to the queue after upgrading to 2.46 were fine.

Any help you can provide to straighten this out would be greatly appreciated.

Hello Miguel,

Tuesday, January 4, 2005, you wrote:

MDLB> I updated AALog and can't get it to read my old logs.

Do you really install _upgrade_ build ?

It looks like you installed full new version over old one ...

In this case try such method:

1. Copy your log files (*.db, *.mb, *.px, *.xg? , *.yg?) in a safe place.
2. Create new log with the same filename you have used in old version.
3. Close AALog.
4. Replace created log files by files saved in the step 1.

Best regards,
Sergei

2706. CwType 1.34 beta is published

Yahoo group: dxsoft
Date: 2005-01-09 13:36:53 UTC
From: Sergei Podstrigailo
Topic: 2706 Message: 2706

Hello All,

I just have published CwType 1.34 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

Comments and bug-reports are very welcome!

==========

CwType Versions History

V1.34
"Setup" menu was fully rewritten.
New interfaces are supported now - RigExpert and OmniRig.
Some minor options were added.
Some minor bugs were fixed.
V1.32
Macrosequences for CwGet control were made :
~[rpNN] - to replay last NN seconds;
~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
These macrosequences work with CwGet 1.39 and later.
V1.31
CwType can generate sound via soundcard now.
Used device is defined by SoundCardNumber parameter in CWTYPE.INI file.
"SoundCardNumber=-2" means internal speaker, "SoundCardNumber=-1" means
"default soundcard" , another value means soundcard number to be used.
Soundcard generated signal has sine waveform and smooth edges of envelope,
so it can be used to form CW signal by SSB transmitter.
Rise and decay time of soundcard generated CW-signals is defined
by "RiseTime" value of CWTYPE.INI . It is a time of signal rising from
0 to 100% level in milliseconds. A time from 10% to 90% level is about 0.6
of this value.
V1.30
Manipulation stability at slow computers was improved.
[...]

Best regards,
Sergei

2709. AALOG 2.47 crashing after install

Yahoo group: dxsoft
Date: 2005-01-17 22:09:27 UTC
From: Jan
Topic: 2709 Message: 2709

Hello...

I'm trying to evaluate AALOG 2.47 on 2 different machines; Windows 2000 SP-4 and Windows XP SP-2. The program installs as well as does the BDE, however on both systems, when trying to execute the program, it gets as far as the splash screen then is terminated by Windows.

Can anyone shed some light on what my problem could be? I'd really like to take a good look at this program as I am not satisfied with any of the other logging porograms that I've tried. Please help!

73,

Jan - VK2ILO

Yahoo group: dxsoft
Date: 2005-01-30 18:41:21 UTC
From: koverendre
Topic: 2717 Message: 2717

Dear Alex,

I can report the following bug:

On the "New QSO" window when I click on small watch icon -to refresh
time filed - the date field goes wrong.
Same problem is on "Edit QSO information" panel, immeditly after
opening it.
Without paying extra attention this error can cause major problem
logging QSO date. Little bit uncomfortable.

My enviroment is:
AMD Duron 750MHz
768MB RAM
Windows XP Home edition, Hungarian.

Hope You can fix it, best regards
Endre Kover

2719. CwType 1.35 is released

Yahoo group: dxsoft
Date: 2005-01-31 13:21:26 UTC
From: Sergei Podstrigailo
Topic: 2719 Message: 2719

Hello All,

I just have uploaded CwType 1.35 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

Comments are welcome!

--
Best regards,
Sergei

==========
CwType Versions History

V1.35
Documentation was updated.
Some minor changes were made.
V1.34
The "Setup" menu was fully rewritten.
RigExpert interface and control via OmniRig are supported now.
Some minor options were added.
Some minor bugs were fixed.
V1.32
Macrosequences for CwGet control were made :
~[rpNN] - to replay last NN seconds;
~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
These macrosequences work with CwGet 1.39 and later.
V1.31
CwType can generate sound via soundcard now.
Used device is defined by SoundCardNumber parameter in CWTYPE.INI file.
"SoundCardNumber=-2" means internal speaker, "SoundCardNumber=-1" means
"default soundcard" , another value means soundcard number to be used.
Soundcard generated signal has sine waveform and smooth edges of envelope,
so it can be used to form CW signal by SSB transmitter.
Rise and decay time of soundcard generated CW-signals is defined
by "RiseTime" value of CWTYPE.INI . It is a time of signal rising from
0 to 100% level in milliseconds. A time from 10% to 90% level is about 0.6
of this value.
V1.30
Manipulation stability at slow computers was improved.
V1.22
The "Tune" command was made.
It sends a continuous key down to tune the transmitter.

The hotkey for this command is Alt-U.
A method to switch beacon from AALog was implemented.
The ButtonsRows, ButtonsColumns, ButtonsHeight parameters
of the [Screen] section of the CWTYPE.INI file define macros buttons
arrangement and size.
Some minor bugs were fixed.
V1.20
Macrosequences were made:
~[ce] or `[ce] - to clear edit fields;
~[csnt] or `[csnt] - to clear sent symbols window.

Macrosequences for increment of numbers in the edit fields were made:
~[nic] or `[nic] - to increment a number in the "Call" field;
~[nir] or `[nir] - to increment a number in the "RST" field;
~[nin] or `[nin] - to increment a number in the "Name" field;
~[nio] or `[nio] - to increment a number in the "Other" field.

Macrosequences for logger control were made:
~[lgc] or `[lgc] - to clear all fields, except "Date", "Band" and
"Mode" in the "New QSO" window of the AALog;
~[lgt] or `[lgt] - to set current time and date in the "New QSO"
logger window;
~[lgs] or `[lgs] - to save QSO into the log;
~[lgts] or `[lgts] - to set current time and date and save QSO.

The "Setup->Use 'Other' Field As" menu assigns alternative meaning to
"Other" edit field. This meaning is used to catch words from CwGet and to
transfer data to a logger.

2720. Re: Date handling problem

Yahoo group: dxsoft
Date: 2005-01-31 20:28:53 UTC
From: koverendre
Topic: 2717 Message: 2720

Dear Sergei,

The error step by step:

1. Start software, main window opens.
2. I click on "New QSO" icon -->"New QSO" window opens.
Date field contains 2005.01. 1. (Correct date should be 2005.01.31.)
3. I repair wrong date by hand to "2005.01.31."
4. I edit time field by hand or using up-down arrows--> no problem
occur, date field does not change. When I click on the small watch
icon at time field to get current time then date field changes to
"2005.01. 1."
No matter weather "work in real time" checked or not checked.

The situation is the same when I edit an already saved QSO.
When "Edit QSO information" windows opens the date filed goes wrong.
For example it shows "2005.01.6" altough it should be "2005.01.26."

I can observe that always day is wrong: first digit is missing. (6
insted 26, 5 insted 15, 1 insted 01.)

Maybe this is uniqe problem. Is it problem of Hungarian XP?
Regards,
ha0im

2722. error when printing LABEL

Yahoo group: dxsoft
Date: 2005-02-04 09:11:38 UTC
From: BV2WS
Topic: 2722 Message: 2722

Dear Alexander,
I have trouble in printing LABEL form AALog 2.47 QSL service. But I did run well before v2.47.

I made a photo album on our Yahoo DXSoft group named 'BV2WS' and post 3 JPGs to explain my question!

Ths first JPG is label that I design. The second is the preview in design time, the third one is the preview running in AAlog QSL service.

I also upload my 'myQslLabel.frf' to the Group Files directory!

Thank for your help

de BV2WS

2725. Re: [dxsoft] Programming AAVoice

Yahoo group: dxsoft
Date: 2005-02-06 09:56:13 UTC
From: Alexander Anipkin
Topic: 2724 Message: 2725

Hello Knut,

Sunday, February 6, 2005 , you wrote to me:

KM> There is no help file for AAVoice, and I look for a manual for programming the macros.
KM> Anyone?

The program uses the configuration file AAVOICE.INI (in the working
directory). Here is an example of the configuration file:

```
========= cut ========
[Config]
PTTPort=1
PTTLine=1
ExternIniFile=aalog.ini
ExternIniSection=QSO

[Macroses]
Macro1=~[iCall]
Macro2=~[fcq.wav]
Macro3=~[fgoodluck.wav]
Macro4=~[f4.wav]
Macro5=~[f5.wav]
Macro6=~[f6.wav]
Macro7=~[f7.wav]
Macro8=~[f8.wav]
Macro9=~[f9.wav]
Macro10=~[fa.wav]
Macro11=~[ec]~[p40]~[er]~[rx]
Macro12=~[tx]~[ec]~[p40]~[er]~[rx]
========= cut ========
```

PTTPort - is the hardware port being utilized for transmitter
control.
Possible values:
0 - no port is not used;
1 ...4 - COM1...COM4 ;

PTTLine - determine the signal lines of the port being used.
Possible values:
1 - RTS;
2 - DTR;
3 - RTS and DTR;

ExternIniFile - name of the additional configuration file,
ExternIniSection - name of section in this file. The additional
configuration file is used in macrosequences (see below). Pay

attention that, if the path to this file is not entered, it is searched
for in the Windows directory, but not in the current directory.
When using the AAlog logger program it is helpful to specify the name
of its configuration file (aalog.ini) and the name of section "QSO".
It will allow the use of the values of the log fields for the current QSO
in macrosequences.

KEYBOARD MACROS AND MACROSEQUENCES

Keyboard macros are inserted into the input window (in a place
indicated by the cursor) by pressing a function key F1... F12 or at a
'click' on the appropriate button. In turn, keyboard macros may contain
macrosequences. Macrosequences start with a character string "~[" and
are ended by the character "]".
Sound files must bases in /sound subdirectory.

Here is list of macrosequences:

~[fFilename] - to insert contents of the file Filename.
~[iField] - to insert value of a field Field from the
additional ini-file. A filename and section
of ini-file are defined by parameters
ExternIniFile and ExternIniSection in the
file AAVOICE.INI .
If sound file with the name equal to Field is
exists then this file playing.

~[ec] - to insert value of the "Call" edit field.
~[er] - to insert value of the "RS" edit field.

~[tx] - to switch TX on and to switch "pause" off.
~[cl] - to clear the buffer.
`[rx] - to switch TX off.
`[p<number>] - pause on <number> milliseconds.
~[rp<pause>:<number>] - repeat macros string for <number> times with
delay on <pause> milliseconds. This macro can be use
on the end of macros string only. If <number> is equal
to zero then macros string repeat permanently until press
ESC or click Stop button.

Condition of distribution and using of program are given in a file
"license.txt" .

MICROPHONE AND VOLUMES REGULATORS

If the Mike button is clicked then any played macros would stopped and
transceiver would turn on to TX mode. Volume of the microphone
and sound card can be changed by the volume regulators in the Volume
regulator window.

Best regards,
Alexander mailto:aia@...

2729. AALog 2.47; Exact Frequency vs. Band; AutoFill

Yahoo group: dxsoft
Date: 2005-02-07 22:54:24 UTC
From: Rob Greenstein
Topic: 2729 Message: 2729

Using AALog 2.47 with BandMaster and DXAtlas -- all are evaluation.

Early AALog entries were nicely autofilled with the
Exact Frequency (##.###.##) of contact from BandMaster.

Now, instead of exact frequency, only Band (##) is autofilled.

I've found no configuration setting to designate Band vs. Exact
Frequency as a default. Such a setting would be a nice enhancement.

Any suggestions, insights?

2730. AALog 2.47 showing different TX location in DXAtlas

Yahoo group: dxsoft
Date: 2005-02-07 23:18:51 UTC
From: Rob Greenstein
Topic: 2730 Message: 2730

Using AALog 2.47 with BandMaster and DXAtlas -- all are evaluation.

New Qso information from BandMaster nicely appears in AALog. AALog QSO entry displays TX location in DXAtlas as blue antenna and callsign. BandMaster find in DXAtlas shows location of DX Spot with Red Cross hairs. However, AALog QSO location displayed in DXAtlas at a noticably different location (rectangular relief view in Max Zoom).

Same Home Station lat. lon. data is in DXAtlas and in AALog Log Configuration.

Please advise.

I think we have some difference in the coordinates database. DXAtkas
use own prefix table and AALog use another one. From 3.0 AAlog will
use the prefix list of the DXAtlas

Best regards,
Alexander mailto:aia@...

2734. Re: AALog 2.47; Exact Frequency vs. Band; AutoFill

Yahoo group: dxsoft

From: Rob Greenstein
Topic: 2729 Message: 2734

Thanks, Alexander:

Enabling "Use HamPort for Rig Control" then exiting AALog, then running HamPort and configuring for Kenwood TS-480SAT parameters takes care of the problem.

Then launching AALog takes care of starting HamPort, and loading BandMaster & DXAtlas and AALog all automatically.

This is great!!

Topic: 2729 Message: 2735

This is the problem that I also had. If you select Hamport when using Bandmaster you get a conflict which puts AALog in an error loop. Is there another solution?

Maurice:

The following worked for me....

Completely Uninstall HamPort.

Reinstall HamPort, Run it to Configure for your Rig.

Exit HamPort.

Reboot.

Launch AALog and Configure to use BandMaster, (DXAtlas if using), and HamPort.

Exit AALog.

Launch AALog. It should properly launch HamPort, then BandMaster (and DXAtlas if using).

It would we great if you write which software do you mean :-)

In any case, see "Open Capture File" and "Open buffer in Notepad" commands.

2743. AALog and SteppIR Antenna

Yahoo group: dxsoft
Date: 2005-02-15 15:56:16 UTC
From: Maurice Dake
Topic: 2743 Message: 2743

Is any one using the SteppIR antenna and AALog/Hamport/BandMaster combination? I can get either the SteppIR or the Hamport/AALog to respond but can't get both at the same time. Any suggestions?

2746. AALog/HamPort and SteppIR Antenna

Yahoo group: dxsoft
Date: 2005-02-22 03:29:35 UTC
From: Maurice Dake
Topic: 2746 Message: 2746

Is anyone interfacing between AALog/HamPort and a SteppIR antenna? I made up the special Y cable and have everything switching and tracking correctly, however, if I am using the General Mode there is a signal or noise every couple of minutes that tries to switch the antenna to 6 meters. Anyone else have this configuration and problem?

K9EE

2747. Basic setup for CWGET

I have downloaded and installed the trial ver of this product(Ver 1.4). I
have connected my receiver (IC-706MKIIG) to my PC (Dell 600Mhz)and it appears to copy code from the radio but none of the displayed text makes an sense. It is a random set of characters mostly T, E, M, I etc. As best I can tell it is setup for ENGLISH. Any help would be appreciated. I wanted to try before I purchased the product.

At first, read help-file completely.

Then just select desired signal in top window and detector threshold
in bottom window by mouse.

From: k7nhb@quickdata.com
Topic: 2747 Message: 2749

I'm fortunate that the Argo V has line level out so I just set the computer volume control. I use WinPSK software which tells me when the sound card is being over driven. So I adjust the computer (mic in) volume control to over drive, then down a notch.

Once set in that manner, it is code for other sound card modes - like CWGet.

Probably best to find a solid signal, then, as previously mentioned, drag the "level line" just below the cw peaks. You will start seeing QSO's - but it's important to understand that the operators need good sending technique.

Might be good to try one of the "code practice" stations - like ARRL's bulletins or CW practice sessions if you can pick them up. I thought I was having trouble with real QSO's till I realized (I've been away for a few decades) that a LOT of abreviations were being used and/or misspellings are common.

Once you get it setup - it's like magic.

73,
Paul

2754. Navtex log - Feb '05

Yahoo group: dxsoft
Date: 2005-02-25 09:39:31 UTC
From: T.S.Bauge
Topic: 2754 Message: 2754

Hello group.

My name is Tj?rand S. Bauge, and I live in the south western corner of
Norway - some 200 meter from the North Sea.

I have tried SeaTTY 1.50 recently - looking for Navtex broadcasts.
And it works great! My main interest though, is chasing Non Directional
Beacons (NDB's), but monitoring 490, 518 and 4209.5 is great fun too :-)

I have not used the squelsh button - because I might lose something.
But is it possible to add a bandpassfiler in the software to narrow the
audio frequency?

Take care all, and have a nice weekend :-)

My navtex log;

SeaTTY has optimal filter in FSK-decoder.

So any additional _software_ filter is useless.

2756. CwGet 1.45 is released

Yahoo group: dxsoft
Date: 2005-02-25 15:11:51 UTC
From: Sergei Podstrigailo
Topic: 2756 Message: 2756

Hello All,

I just have uploaded CwGet 1.45 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History.

V1.45
User can select soundcards used for sound input and output by
"Setup->Input Sound Card" and "Setup->Output Sound Card" menu now.
V1.40
Documentation was updated.
Oscillogram drawing was improved, especially under Windows 2000/XP.
V1.39
AFC has two parameters now.
The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequency is shown at spectrogram by short thin line.

A one minute sound buffer was made.
The "Replay" button click makes CwType to replay previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used in CwType (V1.32 and later) to
control this sound buffer also.
V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.
[...]

2757. Aatest Problems

Yahoo group: dxsoft
Date: 2005-02-28 13:19:52 UTC
From: yv5mbx
Topic: 2757 Message: 2757

Each time I open Aatest the following error appears "List index out of bounds (0)"

I thought that it was my software version and I upgraded it but the problem continues.

As result of this error, each time I select a contest a different one appears as software headline.

Thanks for your help.

Javier

2758. CwGet 1.46 beta is published

Yahoo group: dxsoft
Date: 2005-03-04 12:04:21 UTC
From: Sergei Podstrigailo
Topic: 2758 Message: 2758

Hello All,

I just have uploaded CwGet 1.46 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

The "Setup->AFC at Mouse Click" option was made. When this option
is selected CwGet make fast AFC to near station after mouse
click on spectrogram regardless of the "AFC" button state.

The "Setup->Tune RIG by" menu switches on the mode of automatic
transceiver frequency control. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram or by "GoToMax" command. Tuning can be
made by RIT or by VFO according selected option. Take to attention
that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.

Feedbacks are very welcome!

2762. Problem with CWGET 146 and wave clone

Yahoo group: dxsoft
Date: 2005-03-06 05:21:29 UTC
From: k7nhb@quickdata.com
Topic: 2762 Message: 2762

I finally installed the Full version of Wave Clone and it seemed to work for the WinWabbler PSK program - the *virtual sound card displays in the sound card choices. But when I tried to use it with the latest CWGet I got an error and had to restart my computer. When I configured SoundCard I could see it in the list. But when I selected it I got repeated AddBuffer error messages till the computer crashed (about 3 or 4 messages).

Is this a problem here - or do we need version 147?
Thanks and 73,
Paul
PS: I'm running OS 98SE

2763. CWGET 146 and Wave Clone

Yahoo group: dxsoft
Date: 2005-03-06 05:26:29 UTC
From: k7nhb@quickdata.com
Topic: 2763 Message: 2763

Maybe I spoke too soon because after I restarted, after the crash, I tried reconfiguring the virtual sound card again and it worked this time - no error message.

I'm wondering if I can only assign the virtual sound card to only one application between reboots. Configure it in Application A, reboot, Configure it in application B, reboot, etc.

73,
Paul

2764. Re: [dxsoft] CWGET 146 and Wave Clone

Yahoo group: dxsoft

kqc> I'm wondering if I can only assign the virtual sound card to only one
kqc> application between reboots. Configure it in Application A, reboot,
kqc> Configure it in application B, reboot, etc.

There are two known problems with WaveClone:

1. Different programs can use WaveClone in the same time only if all them
open sound card with the same parameters.
CwGet use 11025Hz-16bit-mono.

2. WaveClone doesn't handle all error situation. If one program was crushed using WaveClone
or doesn't close soundcard correctly on exit, you probably will need to reboot
to use WaveClone again.

2765. AATEST 3.33 Problems - HLP PLEASE!!!!

Yahoo group: dxsoft
Date: 2005-03-06 13:16:48 UTC
From: yv5mbx
Topic: 2765 Message: 2765

Hi,

Yesterday I opened the log generated along the weekend by Aatest and found no data, the data is the last contest data (15 days ago).

Help will be appreciatted,

Javier

PD: Could be due the Out of bound error (No Ham Port installed)

2766. YV5MBX and his contest log

Yahoo group: dxsoft
Date: 2005-03-07 19:03:18 UTC
From: jayveeone
Topic: 2766 Message: 2766

dear aatest team,

I encountered a similar problem lately.
When I started the ARRL DX contest in CW I opened AAtest and saw a lot of entries from another contest about 4 weeks earlier.

I did not want to export the QSOs and believed, that the program would not recognize them as valid for the new contest.
But after I had got the "dupe" warning several times, I found out that the program referred to QSOs from the old contest.

Now I searched for a filter by which I could export all the QSOs from the old contest. As this turned out to be impossible (at least I did not find out), I started to delete all the QSOs from the other date/contest, after I had exported the composition of old and new QSOs to an ADIfile.

So I continued the contest until evening time and then shutdown the aatest program with all QSOs of the running contest and no QSOs of the old one.

When I opened AAtest the next morning, the log contained the QSOs from the old contest plus the ones I had made until I deleted the old entries. All QSOs from the time where I had deleted the old QSOs until I closed the program the evening before had disappeared. I could not find a file, that perhaps contained a backup. Bad luck !

Now I believe I could have avoided the desaster by starting the contest with an empty log. So I ask you to implement a warning if somebody wants to start a contest without a clear log. The better solution would be to enable the program to discriminate betweeen QSOs of different contests and save them into different files automatically.

Thank you for reading this, I hope I will furthermore be able to use your programs successfully.

2767. cwtype and aalog autofill problem

Yahoo group: dxsoft
Date: 2005-03-08 03:54:18 UTC
From: marten_w7wi
Topic: 2767 Message: 2767

When I am using cw type and enter a callsign, the callsign goes into the new qso field in aalog, but the other pertinent data does not go into the fields from the database, unless I make the aalog window active. It used to work okay with the older version of cwtype. Do you have any ideas?
73 de marten ve2wu / w7wi

2768. Re: [dxsoft] cwtype and aalog autofill problem - and macros mini-FAQ

Yahoo group: dxsoft

From: Sergei Podstrigailo
Topic: 2767 Message: 2768

Hello marten_w7wi,

Tuesday, March 8, 2005, 9:54:18 AM, you wrote:

m> When I am using cw type and enter a callsign, the callsign goes into
m> the new qso field in aalog, but the other pertinent data does not go
m> into the fields from the database, unless I make the aalog window
m> active.

I just have checked CwType 1.36 and AALog 2.47 .
Them works ...

m> It used to work okay with the older version of cwtype.

It should not depend on CwType version ...

m> Do you
m> have any ideas?

A good idea is to enter QSO data into _AALog_ window, not CwType edit fields
and use ~[i...] macros in CwType:

=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th

`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

y> Help will be appreciatted,
Please check size of aaltest.dat file and aaltest.rec file if it's
exists.

What operations your perform before closing aatest?

y> PD: Could be due the Out of bound error (No Ham Port installed)

NO link with it.

Best regards,
Alexander mailto:aia@...

Yes, it exist and are different in size, so????

> What operations your perform before closing aatest?

The computer is using Xp and goes into hibernation mode after that I pressed enter and close the application & computer, next morning I opened the application and the error appeared.

Ideas welcome?

Javier

2788. Re[4]: [dxsoft] CwGet 1.46 beta

Yahoo group: dxsoft
Date: 2005-03-12 05:54:44 UTC
From: Sergei Podstrigailo
Topic: 2778 Message: 2788

Hello Karel,

Saturday, March 12, 2005, 6:28:23 AM, you wrote:

KE> ??? did I say they are same? You just forgot to change the ver. number in
KE> certain places, thats what I meant. Karel, VA3KO

Where are these places placed ? :-)

There are different links to 1.45 and 1.46 beta.

When you install 1.46 beta, installer say that you install 1.46.

"About" dialog says about 1.46 too.

Help-file says about 1.45, but it is _really_ help-file
for 1.45 version, without new features of 1.46 .

And it is reason why 1.46 called "beta".

From: Karel Ebenstreit
Topic: 2778 Message: 2789

Hello Sergei, thanks for the explanation, but the gentleman who asked earlier where can he find ver.1.46 since www.dxsoft.com only had ver 1.45, you perhaps should explain that one to him. I thought that www.dxsoft.com was the place where the version number was forgotten to be changed. Last time I checked it had 1.45 only. I may be wrong and I apologize.
Thanks for your hard work Sergei, I am sure that it is very much appreciated by all users of your programs and sorry for taking your valuable time with these minor problem questions. Karel, VA3KO

2790. TrueTTY 2.38 beta is published

Yahoo group: dxsoft
Date: 2005-03-12 14:08:44 UTC
From: Sergei Podstrigailo
Topic: 2790 Message: 2790

Hello All,

I just have uploaded TrueTTY 2.38 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

Feedbacks are welcome!

--
Best regards,
Sergei

==========
TrueTTY Versions History
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.

The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V2.37
The documentation was updated.
Some minor improvements were made, some minor bugs were fixed.
V2.36
A one minute sound buffer was made.
The "Replay" button click makes TrueTTY to re-decode previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used also:
~[rpNN] - to replay last NN seconds;
~[svNN] - to save last NN seconds to a wave file;
~[svpNN] - to save last NN seconds to a wave file and replay it.
V2.35
BPSK-63 mode receiving and transmitting were made.
V2.34
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.

The hotkey for these commands is "Alt-V". Take to attention that a minute of sound recording need above 1 MByte disk space.
Input and output sound devices can be selected in "Setup/Interface" menu separately now. Not only device numbers, but device names are shown there now.
[...]

2791. TrueTTY 2.39 beta is published

Yahoo group: dxsoft
Date: 2005-03-13 17:11:24 UTC
From: Sergei Podstrigailo
Topic: 2791 Message: 2791

Hello All,

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

Feedbacks are welcome!

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.

The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.

2792. OFF TOPIC: WANTED: RAC Emergency Communications VHS tape

Yahoo group: dxsoft
Date: 2005-03-18 18:30:28 UTC
From: Brian A. Hopkins
Topic: 2792 Message: 2792

Hi everyone :-)

This is a little off topic, but ....

I was just wondering if anyone had a copy of the Radio Amateurs of Canada Video # 1002 - Emergency Communications?

I already have the set of tapes minus this one and from what I hear from RAC, they may be discontinuing them; currently they can not get more stock. So if anyone has a copy or knows where I can buy or borrow the tape, I'd appreciate it if you could let me know.

Here's a description of the tape copied from the RAC web site:

Video # 1002 - Emergency Communications

Amateur Radio - A Vital Resource (Produced by RAC) Broad coverage of the public service communications aspects of amateur radio in Canada. (28 min)
When Disaster Strikes (Produced by ARRL and Martinez CA Police Dept) This program discusses the ever-changing role of amateur radio in public safety service leading into the 21st century (25 min)
At Any Moment An overview of amateur radio disaster preparedness. An introduction to the Amateur Radio Emergency Service (ARES) and the National Traffic System (NTS) (14 min)
Last Voice from Kuwait (Produced by Frank Moore - WA1URA and WANE-TV) Describes the heroic effort to maintain amateur radio communications out of Kuwait during the Gulf War (25 min)

Thanks in advance for your help.

Dear Sir

I have an am/ssb HF and 6m rig for sale at £399=00. It is in mint condition:
ICOM RC725.

It has only had light usage but the results are outstanding!!

It comes with full instructions and original box. Also included is a
homebrew CAT lead for your computer connectivity.

Remember its in mint condition.

I accept paypal.

go to the link below for full spec:

www.rigpix.com/icom/ic725.htm (http://www.rigpix.com/icom/ic725.htm)

Sincerely,

Mike. m1dje [UK]

2803. Help ID'ing a transceiver

Yahoo group: dxsoft
Date: 2005-04-07 01:41:54 UTC
From: johnc38654
Topic: 2803 Message: 2803

Hello folks,

I am a newbie and am in the process of obtaining my general class.

What my problem is:

I came by a 'no-name' transceiver in a package bundle at a local
pawn shop. The only id on the thing is RCI-2950.

It appears to be a very old unit. A local general class amature (since
I cannot yet xmit) tried it. It appears it covers 10M band and
expandes into the 11M CB service. It has AM, SSB, FM, and CW
capabilities. Can anyone out there identify this item ? If so please
email me at: jcarrigan@....

Thanks all and 73

John Carrigan

2804. AALog and DX Atlas

Yahoo group: dxsoft
Date: 2005-04-07 09:21:10 UTC
From: David Nigel Crossley
Topic: 2694 Message: 2804

Not sure if this is an AALog or DXAtlas problem. I have mentioned this before but not had a reply. When using TrueTTY, the locator is transferred into AAlog ok, but the stations position on DXAtlas is incorrect (usually it goes to the capital city).

To solve this, I must erase the last character of the locator (transferred automatically into the NEW QSO window of DXAtlas)and retype it in ... then the station location moves to the correct position on the DXAtlas map.

I am surprised others have not mentioned this problem before.

Best wishes: Nigel (G6BIT)

2805. TrueTTY 2.40 beta is published

Yahoo group: dxsoft
Date: 2005-04-07 14:01:10 UTC
From: Sergei Podstrigailo
Topic: 2805 Message: 2805

Hello All,

I just have uploaded TrueTTY 2.40 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

--
Best regards,
Sergei

==========
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.

The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V2.37
The documentation was updated.
Some minor improvements were made, some minor bugs were fixed.

2809. speed accuracy with CWGet

Yahoo group: dxsoft
Date: 2005-04-09 16:39:29 UTC
From: Paul
Topic: 2809 Message: 2809

I was feeling pretty good about my "copy by ear" speed when checking the cw speed reported by CWGet. But when I sent the same speed on my MFJ practice unit it seemed way fast. I figured that was because there was not context.

But yesterday I used CWGet on the ARRL code practice sessions on 14.0475 and they reported speed was about 5 wpm faster than what was being sent.

My concern is, when I use CWGet and CWType together, I set the speed of CWType to match the speed CWGet is reporting - as a courtesy to the other operator. But if CWGet consistantly reports a higher speed, I can adjust by lowering the designated CWType speed.

Has anyone else dealt with these "reported speed matching reality" issues?

Thanks and 73,
Paul

2810. Re: [dxsoft] speed accuracy with CWGet

Topic: 2809 Message: 2810

Hello Paul,

Saturday, April 9, 2005, 11:39:29 PM, you wrote:

P> Has anyone else dealt with these "reported speed matching reality" issues?

Both CwType and CwGet report not speed of real transmitted/received text,
but "PARIS" speed, i.e. speed of "PARIS PARIS PARIS ..." text,
counting duration of dot, dash, in-symbol pause, between-symbol pause, between-word pause
...

Sergei

2811. CwGet 1.47 beta is published

Yahoo group: dxsoft
Date: 2005-04-14 05:18:11 UTC
From: Sergei Podstrigailo
Topic: 2811 Message: 2811

Hello All,

I just have uploaded CwGet 1.47 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

--
Best regards,
Sergei

==========
CwGet Versions History.

V1.47
A problem of frequency control of some RIG types was fixed.

When the "Setup->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V1.46
The "Setup->AFC at Mouse Click" option was made. When this option
is selected CwGet make fast AFC to near station after mouse
click on spectrogram regardless of the "AFC" button state.

The "Setup->Tune RIG by" menu switches on the mode of automatic
transceiver frequency control. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram or by "GoToMax" command. Tuning can be
made by RIT or by VFO according selected option. Take to attention
that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V1.45
User can select soundcards used for sound input and output by
"Setup->Input Sound Card" and "Setup->Output Sound Card" menu now.
V1.40
Documentation was updated.
Oscillogram drawing was improved, especially under Windows 2000/XP.

2816. SeaTTY 1.60 is released

Yahoo group: dxsoft
Date: 2005-04-19 11:08:03 UTC
From: Sergei Podstrigailo
Topic: 2816 Message: 2816

Hello All,

I just have uploaded SeaTTY 1.60 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========
SeaTTY versions history
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
V1.50
The documentation was updated. Some minor bugs were fixed.
V1.40
Soundcard handling was rewritten to avoid synchronization losses during
FAX receiving.
A number of unprocessed buffers ("UpB") is shown in the status line
in place of number of free buffers ("FrB") now.
V1.39
A bug was fixed. The program start was failed if setup was saved with
"OnTop" button pressed.
The "Start/Stop" button was made to start or stop message manually in
RTTY or NAVTEX mode.
V1.37
The "File->Open Wave Capture File" command opens wave-file to save all
sound received from soundcard. File is closed by the
"File->Close Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
The "Setup->Use UTC time" option was made.
V1.35
Different icons in the message tree indicate different file types
(texts and images) now.
[...]

2817. Old Radios

2819. TrueTTY 2.50 is released

Yahoo group: dxsoft
Date: 2005-04-25 14:33:26 UTC
From: Sergei Podstrigailo
Topic: 2819 Message: 2819

Hello All,

I just have uploaded TrueTTY 2.50 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.hamport.com/truetty.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.
The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via Omni-Rig software interface
(see http://www.dxatlas.com/omnirig/). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V2.37
The documentation was updated.
Some minor improvements were made, some minor bugs were fixed.
[...]

2820. Cwget 1.50 is released

Yahoo group: dxsoft
Date: 2005-05-03 09:30:31 UTC
From: Sergei Podstrigailo
Topic: 2820 Message: 2820

Hello All,

I just have uploaded CwGet 1.50 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========
CwGet Versions History

V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.
V1.47
A problem of frequency control of some RIG types was fixed.
When the "Setup->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V1.46
The "Setup->AFC at Mouse Click" option was made. When this option
is selected CwGet make fast AFC to near station after mouse
click on spectrogram regardless of the "AFC" button state.
The "Setup->Tune RIG by" menu switches on the mode of automatic
transceiver frequency control. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram or by "GoToMax" command. Tuning can be
made by RIT or by VFO according selected option. Take to attention
that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V1.45
User can select soundcards used for sound input and output by
"Setup->Input Sound Card" and "Setup->Output Sound Card" menu now.
V1.40
Documentation was updated.
Oscillogram drawing was improved, especially under Windows 2000/XP.
V1.39
AFC has two parameters now.

The first parameter is local deviation in hertzs, i.e. maximal deviation
from current frequency. Second parameter is global deviation in hertzs, i.e.
maximal deviation from last user-selected frequency. User-selected
frequency is shown at spectrogram by short thin line.

A one minute sound buffer was made.
The "Replay" button click makes CwType to replay previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used in CwType (V1.32 and later) to
control this sound buffer also.
V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute
of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.

2825. AAVoice Always in TX

Yahoo group: dxsoft
Date: 2005-05-18 11:06:57 UTC
From: iw0ffk
Topic: 2825 Message: 2825

Hi all
I'm testing AAVoice, when right com port is selected, my rig goes in
tx and the only way to put the rig in rx mode is select another com port
It's very strange because my ptt interface (RTS signal) work fine with
WSJT, PSK31 Deluxe, MMTTY etc.
I'm using Windows XP and the com port setting are 9600,N,8,1
Any idea?
Thanks 73, Marco

From: J.Reed
Topic: 2820 Message: 2826

Good morning David, I don't know the status now of Hamscope
but my copy of Hamscope is very sensitive to it's audio input
from my transceiver, about 1/10th of the audio signal required
to drive CwGet to full input. As I 'need' to boost the input to
get the same results, I had hoped that it was a software solution
in CwGet that would allow me to 'adjust' CwGet perfectly. Guess
not... I believe that Hamscope is available on the site, Dxsoft if
you can get to them... good luck, Jim Reed.

The "Replay" button click makes CwType to replay previous
10 seconds of received signal.
The "Save" button writes previous 60 seconds of a sound to a wave
file in the "Waves" directory.
Special macrosequences can be used in CwType (V1.32 and later) to
control this sound buffer also.
V1.38
The "File->Open Wave Capture File" command opens wave-file to save all
received from soundcard sound. File is closed by the
"File->Open Wave Capture File" command.
The hotkey for these commands is "Alt-V". Take to attention that a minute

of sound recording need above 1 MByte disk space.
A frequency ruler was made.
To move a visible part of spectrogram to left or right
you need to drag it by mouse with Alt key pressed now.

Hello J.Reed,

Tuesday, May 17, 2005, 5:32:32 PM, you wrote:

JR> Good morning David, I don't know the status now of Hamscope
JR> but my copy of Hamscope is very sensitive to it's audio input
JR> from my transceiver, about 1/10th of the audio signal required
JR> to drive CwGet to full input.

It sounds like Hamscope losts 20dB of soundcard dinamic range ...

JR> As I 'need' to boost the input to
JR> get the same results, I had hoped that it was a software solution
JR> in CwGet that would allow me to 'adjust' CwGet perfectly.

It looks like you need to select "Logarithmic spectrogram" and
"Logarithmic oscillogram" options in CwGet.

Hi, I'm new to weatherfx and new to this group. I'm using an IBM 560 laptop Win98 and a Realistic DX394. I have used the mic input with the level turned down and the tape socket on the rx. Is this OK for the soundcard input? I'm finding it hard to locate a list of station freqs and scheds but have received maps from Offenbach and Northwood and some Navtex but antenna is a lash-up at the moment! Would appreciate any assistance
Stuart.

If you use mic input, you need add an external attenuator,
because you can NOT prevent soundcard overloading by software
level reducing ...

I didn't quite understand your question.

If your soundcard has line-in input, just insert cable jack to it ...

Topic: 1951 Message: 2832

Hi Stuart,

I'm a SeaTYY user and i've received your mail from dxsoft group.

I'm using SeaTTY for daily weather forecasts for merchant marine. Due to regulations, merchant ships keeping actual information about marine radio frequencies and i have updated regional list books. (Especially for the Eastern Mediterranean Sea, Aegean, Black Sea & Turkish Waters)

Admiralty List of Radio Signals vol.3 includes information on WeatherFax and FEC/TTY stations, frequencies and transmission schedules.
You can find these books at marine suppliers. Volumes have heavy and large information, but if you can not reach them please do not hesitate to ask me for your specific needs from that books.

You can find a lot of interfacing diagrams at ham radio sites such as
http://www.google.com.tr/url?sa=U&start=1&q=http://www.ik3qar.it/rtty/1/&e=42 and
http://www.w5bbr.com/soundbd.html

I found SeaTTY very useful for daily needs and it became one of my most using program. JVComm32 is better for Navtex message classification but SeaTTY is very handy, more accurate and simple to use.

Bilal

Date: 2005-05-30 21:00:58 UTC
From: mbc
Topic: 2833 Message: 2833

I need some idea to made antenna, 20meters long antenna

this antenna must be perpendicular to ground, 20 meter long (to work in 80 meters band), easy to transport in my car (ford sierra), easy to mount or join pieces, I only need one electrical wire or conductor, not coil, not electrical adapter, only mechanical support

I have one sled comet (4.2 square meters, yes, 4 square meters), it flies very well, but only with apropiate wind, and of course i can't use it always

¿can you help me?

i'll like it was not expensive

thanks

MBC, though you have been 'clear' on what frequency you need, your need would be more easily met by giving more details... do you need to transmit on the same antenna?

My feeling about 'kite' supported antenna is that one is too 'busy' with kite flying to really concentrate on the radio end.

So, not knowing what you have in your mind let's me suggest that you use a length of wire, equipped with a piece of nylon string, along with a weight and simply throw that up and into a tall tree. Then when you are done, pull the entire length of string and wire down...

Or, possibly... a helium-filled(hydrogen?) balloon pulling up a full halfwave or even 5/8 wavelength of wire and then feeding that end-fed via a simple coupler/ant tuner. Why? so that you could get the maximum transfer of energy without relying on a low impedance earth connection.

What do you think so far? Jim Reed.

"MBC, though you have been 'clear' on what frequency you
need, your need would be more easily met by giving more
details... do you need to transmit on the same antenna?"
yes, I need transmit and recive at 80meters band, exactly from 3.600MHz to
3.700MHz (or only near one frecuency in this band), and, off course, if you
know better thing, please, tellme it
The nost iportant thing about this antenna is mount velocity and space
transport in my car

" My feeling about 'kite' supported antenna is that one
is too 'busy' with kite flying to really concentrate on the
radio end"
Oh, no, mi sled kite with about 4 square meter flyes very well at about
300meters height and support too well 40meters wire antenna

" So, not knowing what you have in your mind let's me
suggest that you use a length of wire, equipped with a
piece of nylon string, along with a weight and simply
throw that up and into a tall tree. Then when you are
done, pull the entire length of string and wire down..".
There aren't mor than 12-15meters tooll trees around my city
I have do it with 40meters dipole (allways for 80 meters band) and iI think
it don't works fine
I work with ICOm735, mfj949e, balum at dipole feed and 12V. car battery

" Or, possibly... a helium-filled(hydrogen?) balloon
pulling up a full halfwave or even 5/8 wavelength of wire
and then feeding that end-fed via a simple coupler/ant
tuner. Why? so that you could get the maximum transfer
of energy without relying on a low impedance earth connection."

I can't buy helium or hydrogen, its too dificoult to me
I use, like Marconi, one sled comet, but wind isn't regular and usually in
the best qso it comes to ground

" I need some idea to made antenna, 20meters long antenna
this antenna must be perpendicular to ground, 20 meter long (to work in 80
meters band), easy to transport in my car (ford sierra), easy to mount or
join pieces, I only need one electrical wire or conductor, not coil, not
electrical adapter, only mechanical support

I have one sled comet (4.2 square meters, yes, 4 square meters), it flies
very well, but only with apropiate wind, and of course i can't use it always

?can you help me?

i'll like it was not expensive

thanks"

From: david kumar
Topic: 2838 Message: 2838

Hi all you folks there !
I am an old man (65 years young) and am into DXing for the last year or so.I live in India and am using an old RACAL receiver. I picked up a voice transmission several months ago, on 23460 Khz. the stuff is all in code .The transmission is very regular and on air daily . Only figure code in groups of five and it appears to be some sort of recorded transmission or computer generated voice.No head or tail to the text message. Its heard at 1630 / 1730 /1830 Indian Standard Time. Could someone tell me if they happen to know what stuff this is ?Thanks & hoping to hear from y'all.
bye
Babu

Greeting from the USA:
In reference to the 'code voice numbers transmission' you described. There are about 50+ transmission similar to this coming from all over the world. An article in 'World Radio ' another in 'Short Wave Listening' magazines and several others talked about these 'strange' messages. All that anyone has been able to come up with is:' they are coded messages from different governments and their internal agencies all over the world. Who these messages are going to or what they mean, is even a darker mystery. No one seems to really know!
Over the past months I have randomly listened to some of them on different channels, usually they had the same sounding voice, but the number patterns differed.
Also if you listen to the channels these voice transmissions are on, then several KHz away you sometimes find a FSK signal, but NOT of the usual shifts. Then NOT always the same tones or shifts. The most I was able to get out of this jiberish was again code groups of 5 or 6 letters. Then everything changed and jiberish again.
In fact these strange signals reminded me of the old Russian 'Wood Pecker' over the horizon radar signals, as to the patterns and then quick frequency and pattern changes.

Hope the above has helped you a little bit.
I would enjoy chatting with you more in the future, either over the Internet of via ham radio.

Have a great day and good DXing.
Pete

Have a GREAT day

1. Do you see signal in SeaTTY spectrogram window ?
2. If yes, did you make right tuning (signal beetween vertical red lines)?

3. If yes and you see only slant lines, it can means that your soundcard
has too big sampling frequency error. Just do slant correction
(via <-/\-> button) along these slant lines.

Greeting from the USA:
In reference to the 'code voice numbers transmission' you
described. There are about 50+ transmission similar to this coming from
all over the world. An article in 'World Radio ' another in 'Short Wave
Listening' magazines and several others talked about these 'strange'
messages. All that anyone has been able to come up with is:' they are
coded messages from different governments and their internal agencies all
over the world. Who these messages are going to or what they mean, is
even a darker mystery. No one seems to really know!
Over the past months I have randomly listened to some of them on
different channels, usually they had the same sounding voice, but the
number patterns differed.
Also if you listen to the channels these voice transmissions are
on, then several KHz away you sometimes find a FSK signal, but NOT of the
usual shifts. Then NOT always the same tones or shifts. The most I was
able to get out of this jiberish was again code groups of 5 or 6 letters.
Then everything changed and jiberish again.
In fact these strange signals reminded me of the old Russian
'Wood Pecker' over the horizon radar signals, as to the patterns and then
quick frequency and pattern changes.

Hope the above has helped you a little bit.
I would enjoy chatting with you more in the future, either over
the Internet of via ham radio.

Have a great day and good DXing.
Pete

Have a GREAT day

dear kumar.
I got ur reply to my mail. Since u are located in W land, u may
contact ARRL by logging
on to WWW.ARRL.ORG and get started with. They are great people to
guide u step by
step as to how to get started and get a novice licence and upgrade
gradually upto
General Class or so. This is for ur kind information.
Best regards
govi

2851. Zero-Beat

Yahoo group: dxsoft
Date: 2005-06-12 12:47:31 UTC
From: KC8YOL-Tom
Topic: 2851 Message: 2851

Sergei
Is CwType "SpeakerTone" and CwGet "TxFreq" to be set to the same number "1000"?

What is CwGet "FFTCenterFreq" used for?

In top window if the vertical 'red' line is some notable distance right or left of thick black line, I must adjust radio frequency (up or down) for zero-beat.
Is this a true statement, if not please point me in the correct direction.

Thanks
Tom - KC8YOL

2852. Re: [dxsoft] Zero-Beat

Hello KC8YOL-Tom,

Sunday, June 12, 2005, 7:47:31 PM, you wrote:

KT> Sergei
KT> Is CwType "SpeakerTone" and CwGet "TxFreq" to be set to the same
KT> number "1000"?

At least, it is good idea, because TxFreq is frequency of zero-beat tuning ...

KT> What is CwGet "FFTCenterFreq" used for?

It is center frequency of spectrogram.
You don't need to edit it manually - just drag spectrogram left or right
with Alt key pressed.

KT> In top window if the vertical 'red' line is some notable distance
KT> right or left of thick black line, I must adjust radio frequency
KT> (up or down) for zero-beat.

Yes.
Newest version of CwGet can tune radio automatically also ...

KT> Sergei
KT> Is CwType "SpeakerTone" and CwGet "TxFreq" to be set to the same
KT> number "1000"?

TxFreq must be equal to your transceiver zero-beat frequency.

Sergei
1st note said CwType "SpeakerTone" and CwGet "TxFreq", set same is good
and CwGet V1.50 can tune radio.
Next note said "TxFreq" to be set same as transceiver zero-beat freq.
My radio is ICOM 718, the operations manual has nothing in it about zero-beat.
The radio / computer interface that I use is RigBlaster plus by West Mountain Radio.
I do not see anything in manual or diagram that will let the computer adjust
the radio VFO.
Do you think I set "SpeakerTone" and "TxFreq" the same and do my best at
adjust radio VFO so the peak freq and black line are closest is this best I will
get with current equipment?
Do you have other suggestions?
Thanks!
Tom - KC8YOL

Hello Thomas,

Sunday, June 12, 2005, 11:00:43 PM, you wrote:

TJ> Sergei
TJ> 1st note said CwType "SpeakerTone" and CwGet "TxFreq", set same is good
TJ> and CwGet V1.50 can tune radio.

I mean it is good to set both to transceiver zero-beat frequency.

TJ> Next note said "TxFreq" to be set same as transceiver zero-beat freq.
TJ> My radio is ICOM 718, the operations manual has nothing in it about zero-beat.

It can be called as "Pitch" , "Shift", "Offset" etc. in chapter about CW mode.

TJ> The radio / computer interface that I use is RigBlaster plus by West Mountain Radio.
TJ> I do not see anything in manual or diagram that will let the computer adjust
TJ> the radio VFO.

You need general CAT interface (from COM-port to transceiver) and OmniRig software
installed.
CwGet tune radio via OmniRig ...

2858. SSB world receiver

Yahoo group: dxsoft
Date: 2005-06-15 11:29:52 UTC
From: rob
Topic: 2858 Message: 2858

Hello

I have a small SSB world radio receiver (Degen DE1102) which is supposed to receive weather stations, etc... After installing your seaTTY program I gave it a try, but lost my nerve after a couple of days. Now I would like to retry it, but the 30 day period has expired!

Before registering your software can you assure me that the program will perform properly, considering the fact that fine-tuning has to be done with a small fine-tune knob only?

Best regards
rob

I'd prefer that you test software _before_ purchasing ...

BTW, if you have old trial version, try to download and install newest one.

r> considering the fact that fine-tuning has to be done with
r> a small fine-tune knob only?

You can correct tuning by moving RX marks at SeaTTY oscillogram ...

Hi there,
Could anyone tell me the brand names and model numbers of a good radio receiver (for DXing of course - with SSB/FSK/CW etc) 3 - 30 Mhz and whether this type of a receiver can be bought in BANGKOK, THAILAND ? And for how much in US Dollars?

For Mr. GOVINDARAJAN SREENIVASAN - Hi there Govi - Is this sort of receiver available in India and how much will it cost (in Indian Rupees) ?

I strongly reccomend the Yaesu 897d. This is both a portable and base. It has two on-board batterys which will supply 20 watts for 4 hours each. A piggy back tuner can be attached. Will work 3- 30 plus 50 mhz 70 cm and 440. Us Dollars about $850.00 they are not fancy but they will get the job done. check them out at Ham Radio Outlet or Universal radio or AES. let me know what you decide. jeff, N4JDU

dear kumar,
This mail is only an addition to my previous mail. You have enquired about the availability in India. No.They have to be imported from J land or W land only with permission from Ministry of Communication and it is possible only if u are a licenced Ham with a call sign and you may be required to pay Customs Duty in the order of about 35% on CIF basis.
It is a long drawn procedure and you can log on to www.Hamcity.com or www.MFJ.com etc. or classifieds at WWW,ARRl.Org.
If only they are available at India, my shack will be the most modern and latest and powerful
one. hi. hi.
Good luck dear kumar.

dear Kumar,
it is govi here. I have just received ur mail now. In connection with ur receiver purchase there are umpteen number of them. Please log on to WWW.ARRL.Org
and click on classifieds. You will see plenty of items within W land and u can choose at ur own will and volition and get it delivered at ur home. U can also bargain mentioning ur specifications. Please do not buy new because they are
very costly.They can also give u info on the forthcoming Dayton convention.As fpr taking the receiver, u must have the information of reciprocal licensing with the country u are proposed to take it and it should not have a transmitting unit since
a transceiver is a security item.

Best of luck and regards
govi(VU2SGR)

What is the function of the first character in each definition line? I
suspect that it must be unique, beyond that and that it is often, but
not always, the same as the final display on screen character at the
end of the definition.

The first symbol is a symbol entered by keyboard.
Then there is dat-dash sequence ,
and last symbols is a text shown in Sent window.

F.e. if you enter

$ -.--. KN

in CWT-file, software will send "-.--." and show "KN" in sent window after "$" entering.

2871. AALog - Adding DXCC Entities

Yahoo group: dxsoft
Date: 2005-06-20 02:26:35 UTC
From: hopat48
Topic: 2871 Message: 2871

I have registered v2.47 of AALog. Trying to add some "deleted" DXCC Entities to allow proper tracking of DXCC credits. Used "Tools" > "Award References" > "DXCC" then right clicked and selected "Add new entry". Added "DM" (German Democratic Republic) and approriate date range. The new entity shows up in the "Entity List" and in the Awards Manager drop down. However, if I pick a log entry for Y57WJ and attempt to use the "Change Territory Information" button to change to GDR, the DM prefix is not available. Am I missing a step?

Thanks and 73,
Pat - W5VY

Hai Arun,
Indeed it is nice of you to contact me. I had read ur mail and happy
to note that
you are still interested to continue ur ham radio activities. I
suggest you log on to
www.qrz.com and look for A47RS.It is the only station at oman and u can contact
them and get info on how to continue ur had radio activities. There
are no other
station I could locate. I also suggest u to continue ur radio
activity by logging on
at Echolink.org and down load the software. By validating ur software by a fax
message you can locate at the site, u can continue to work ur ham radio
through the internet by VOip i.e. Voice Over internet protoco by a
head phone attached with mike. U can also note down the address of
the call sign VU2SDN,and his email address provided below the call
sign page,
an exofficial at Ministry of Communcations , India through QRZ,com about whether
reciprocal licencing facility available at ur country availability& procedures
for getting one. Wish U best of luck.

2877. CallTTY - connect soundcard output/inpout to cordless phone (2.5MM jack) ?

Yahoo group: dxsoft
Date: 2005-06-26 07:51:45 UTC
From: a10382
Topic: 2877 Message: 2877

Two questions about CallTTY:

Q#1) Is there a way to connect the soundcard in/out for CallTTY to the 2.5MM jack on a cordless (or even a cell) phone ??

I'm contemplating using CallTTY as a TDD to reach some family members who are HoH. However, it is only used very intermittently. Rubber banding my computer headset (spkr & mic) to a phone handset, while it works, is a bit awkward and also picks up all the stray noise in the room (CW, radio chatter, air conditioner, voices, printer, etc.

A simple circuit and some mini-plugs might do the trickm but I's fairly sure the circuit would have to limit inout to the cordless phone's mic input (from the sound card's spkr output) so as not to overdrive the phone handset.

Q#2) Is there an automated phone system that will let me test the TTY without a person at the other end ?? Something like an automated TTY atattendent that I could interact on a landline TTY call.

I just made an experiment and found that it is possible to connect
with TTY device via Skype Out service.

Is it interesting for you ?

2880. AAlog - keeping track of multiple logs?

Yahoo group: dxsoft
Date: 2005-07-10 19:32:09 UTC
From: kristinnandersen
Topic: 2880 Message: 2880

I just registered for AAlog 2.47, after playing with the demo
version.

I would like it to keep track of my different logs/operations, such
as:

TF3KX (base station operation)
TF3KX/QRP (my qrp rig operation)
TF3KX/1 (operating while on vacation in call area 1), etc.

I would like to be able to extract each of these when I need, and
also
to be able to view them together, for the purpose of DXCC, etc.

What is the most logical way to accomplish this in AAlog? How are
others using AAlog to organize multiple logs?

The software offers separate "log names", "log files", "log sets"
and
simply "logs". It is not clear to me how these are related or how I
could use these for my above purpose. Does each log file contain
many
log sets, or are log sets common for multiple log files?

73 - Kris, TF3KX

this one is right: "log sets common for multiple log files"

Just create 3 logs with the same log set name and you get DXCC stat
for all of them. Search function will work with data from all this
log.

2882. AAlog - frequency format not recognized

Yahoo group: dxsoft
Date: 2005-07-11 14:08:57 UTC
From: kristinnandersen
Topic: 2882 Message: 2882

Hello:

I have now imported all my logs into AAlog. Some of my contacts come from ADIF files generated by the N1MM logger software. Some of the frequency values there are with 4 or 5 digit resolution after the decimal point, i.e. 14.0951 or 14.09512.

All of these are stored and displayed OK by the AAlog, but it seems that the awards manager of the program does not recognize contacts with such frequencies. If I cut the frequency resolution down to 3 digits, i.e. 14.095, then the contacts are recognized by the awards manager.

Is this a known issue? Any solution? I don't care if I have to truncate all frequencies to 3 digits after the decimal points, but is there a way, then, to do this in an automated way? I have about 4000 QSOs logged...

I am Srinivas from India. Call Sign vu3atk. I read your mail and pls note that you can do the frequencies down (round-up) to 3 digits. i.e., 14.095. It is correct. You can mentione the same in your log book too. Theawards manager will recognize the same.

wish you best of luck.

Regards,
vu3atk.

Topic: 2882 Message: 2886

Thanks for the comments on the fact that the awards manager ignores frequency values with more than 3 digits after the decimal point. The comments were to (a) refresh the databases, and (b) simply round off the frequency values.

Refreshing the databases did not help. I also tried deleting the database file and starting again, but the results were the same. Now, rounding off the digits is a possibility, but it will take some time as I have thousands of QSO entries in my log.

I guess I will start rounding off the digits manually, unless someone points out a way around it.

From: don_putnick
Topic: 2887 Message: 2889

Hello Pedro,

What the best is depends on what you want to do with it: short-term
or long-term forecasting.

For long-term forecasting (seasonal), independent of A and K indices,
the industry standard VOACAP is used by amateur radio operators and
international shortwave broadcasters alike. It is free from
http://elbert.its.bldrdoc.gov/hf.html

For short-term forecasting (tomorrow), using A and K indices, there
is other software. Perhaps someone else could make a recommendation.

Best regards,
Don Putnick NA6Z

2891. Re: AAlog - frequency format not recognized - check regional settings

Yahoo group: dxsoft
Date: 2005-07-12 18:08:12 UTC
From: kristinnandersen
Topic: 2882 Message: 2891

Thanks for checking this further out, Alexander. I did what you suggested, but with no success.

However, I have a new hint. I use the "European" decimal settings in my Windows setup. In Control Panel / Regional settings I have a COMMA as a decimal separator and a PERIOD as a grouping symbol. This is the reverse from the US (and maybe other parts of the world?).

I switched to the US setup for a decimal separator and then all my frequency entries were counted correctly by the awards manager. Went back to my European setup and the problem started again. Did database refreshes but they changed nothing. So, I believe the problem is related to this.

All my logging is US-style, with a decimal point (ASCII character 46) after the MHz, for example: 14.123 or 14.12345. Note that the ADIF standard requires that we use specifically that character, no matter what regional settings we have in Windows.

So, I suggest you check what effect the regional settings (and type of decimal separator) have on the counting of the awards manager.

Best luck and thanks for looking into this. 73 - Kris, TF3KX

2893. Run 9600 baud packet with TrueTTY?

Yahoo group: dxsoft
Date: 2005-07-14 21:25:06 UTC
From: Jerry Brooks
Topic: 2893 Message: 2893

I just did a search of the group for "9600". Didn't find an answer.

My packet rig consists of Signalink SL-1+, Yaesu FT-8800, and a Dell Laptop. I have been trying to setup 9600 baud packet but can't seem to get AGWPE and AGWterm to "see" the packets.

So, I am looking for another soundcard program that will do 1200 bd packet and 9600 bd packet without relying on AGWPE/AGWterm.

Will TrueTTY transmit and receive both 1200 and 9600 baud packet?

Thanks,

Jerry

From: koverendre
Topic: 2896 Message: 2896

Dear Friends,

I would like to fix-up QSL info in my AAlog (ver 2.47) software.
Please help me, answer my questions.
1. How can I update internal QSL manager database? What is the
database format to do this?

2. Please give me the exact source locations for
QMGR
QSL routes
WinQSL

databases.
(I have found lot of pages on the net, but I am confused which one to
use?)

Best regards:
Endre Kover

to import data to AALog you need create dbf file with this string fields
Call
Manager
Year
Note
Author

Field Year is 30 chars max length
Field Note - address up to 220 chars.

Author - author of information

You can create this file in the MS EXCEL. First sting is headers of
the fields. The next strings contain data

Best regards,
Alexander mailto:aia@...

2900. Re: [dxsoft] propagation software

Yahoo group: dxsoft
Date: 2005-07-24 00:47:32 UTC
From: Brian Heywood
Topic: 2887 Message: 2900

Good morning Pedro,
The short path is the most direct route for example from Peru to New Zealand you would direct your aerial to the Southwest across the Pacific Ocean.
The Long path is the opposite direction for example to the North east across Europe and then down across India and Australia.
When the country you want to transmit to is close to half way then sometimes propagation is better one way than the other.

Ham cap program uses a subprogram that is used by communication companies where the transmitter site is some distance from the receiving site and uses different aerials and the audio is carried by telephone lines to the major population centre or a broadcast station with 500 feet tower and the listener with a whip aerial..
The program also is allows for you with dipole (half wave) aerial and the other station you are transmitting to has a 6 element yagi beam.

2901. Omnirig does not work

Yahoo group: dxsoft
Date: 2005-07-25 04:11:50 UTC
From: UA0SN
Topic: 2901 Message: 2901

Hello:
Can anybody help me to start the Hamport and Omnirig.

I use ICOM735
and configured the Omnirig as follows:

Rig type IC-735
Port COM2
Baud rate 1200
Data bits 8
Parity None
Stop bits 1
RTS High (I tried Low, but with the same result)
DTR High (I tried Low, but with the same result)
Poll int, ms 500
Timeout, ms 1000

The same configuration I used in other program (MixW2)
and the connection works nicely and without problem.
What I have to do here so the Hamport will work?

Make sure that another software doesn't use COM-port in the same time with OmniRig.

If OmniRig can't open COM-port, it doesn't produce any message, just not working ...

Please create log file for Omni rig and send it to me.

To enable error logging,
stop all programs that use OmniRig and add the following lines to the
OmniRig.ini file:

[Debug]
Log=1

The log file (OmniRig.log) is created in the OmniRig directory upon the
exit from all programs that use OmniRig, and is cleared on the next start of
the program.

Best regards,
Alexander mailto:aia@...

2904. Re: [dxsoft] propagation software

Yahoo group: dxsoft
Date: 2005-07-27 05:48:27 UTC
From: govindarajan srinivasan
Topic: 2887 Message: 2904

dear pedro,
I am Govindarajan and my call sign is VU2SGR. I hope I can answer a few questions raised by ur mail. The difference between long path and short path is that if U use a Great Circle Map
the entire orientation of the World Map will change. For example, in India, working a US station on air is not to point ur antenna to west but it is actually in North. So,if I point my antenna to North the distance between my shack to US compared to pointing to South it will be lesser and it is known as shortpath. If I point my antenna to South, the Signal will go via
South Pole and the distance will be longer. Working a US station theourh South Pole is long path. I hope U will agree with me.
The next question U raised is a very valid one. For each band and each frequency u use, must be resonant to the antenna length u use. For e.g. the 40m band antenna will work best for 7 Mhz and sometimes it can be used for 21 MHz also. The 20M band is best for 14 MHz and 15m band is good for 21MHz and 10Mband is good for 28-30MHz. the exact antenna length for a dipole can be calculated by applying a formula for resonant frequency using inductance and capacitance. On the contrary, if U use an antenna tuner, U can work all bands with only one antenna since it tunes the working frequency to resonance. The subject is a very big one and the frequency and wavelength of the antenna are inversely proportional.
U can reach me on gmail id govic1953@... and also through yahoo groups.
Good luck and good dx.BTW my call sign is VU2SGR.

From: KE5CTY Bob
Topic: 2905 Message: 2905

OK I am 90 % there (I think).

I have everything I need but a 25 pin serial cable.

I might even have that, just need help finding out.

I went all over the internet today looking for a way to test this cable
and verify that it is a serial cable.

Description:
25 pin D connectors on both ends
One female end and one male end
Numbers on cable:
E157914 PRIMAX AWM 20276 80deg C 30V VW-1

If anyone knows what this cable is or can tell me how to ring it out
with my multimeter I would appreciate the help. I need to know if this
is a serial cable or not.

While there is no doubt that this software is long out of production,
and supports a legacy product, nonetheless the current owners of the
rights to all of AEA's Stuff is www.timewave.com - and they might, or
might not, have a bit of a problem with bootleg copies of PC PAKRATT, etc
being 'traded' so publically.

I haven't bothered to ask them, since I have three original copies,
including one that came with my first PK-232, sn #76 (not a typo).

Then there's the matter of Topic, which none of the above is,
technically.

Just a Thought - no use waking up the Dawgs if you don't have to...

Cheers

Date: 2005-08-02 13:27:18 UTC
From: jayveeone
Topic: 2913 Message: 2913

Hi PK-232 owners,

I do own an old Packratt PK-232 MBX with an updated EPROM version 7.2
The recommended software by timewave are either PKterm or XPware.
The first one costs abt. 100.00 $, the second one abt. 80.00$.
I tried the evaluation copies of both, but I am not satisfied. The
software seems to be somewhat out of date compared to modern programs
like MixW for instance, which costs only 50.00$.
I am not using the PK-232 because of the drawback of missing good
software.
So I am looking forward to some modern up-to-date terminal program that
will be able to work with this apparatus.
I would be glad to learn about efforts taken into this direction.

Well when software is as old as the original windows software and is not being produced or sold by any retail source, I really don't think a copy is a threat to anybody. I am strongly against piracy that threatens current production and research. But there is no way that a copy or copies of that old windows software would be any threat to anybody or any business.

While there is no doubt that this software is long out of production, and supports a legacy product, nonetheless the current owners of the rights to all of AEA's Stuff is www.timewave.com - and they might, or might not, have a bit of a problem with bootleg copies of PC PAKRATT, etc being 'traded' so publically.

I haven't bothered to ask them, since I have three original copies, including one that came with my first PK-232, sn #76 (not a typo).

Then there's the matter of Topic, which none of the above is, technically.

Just a Thought - no use waking up the Dawgs if you don't have to...

Cheers

John KB6SCO

Double-click at image to open it in external image editor.
Then use editor to edit your image.

I'd recommend free but excellent IrfanView - http://www.irfanview.com/ .

Open image in external editor and save as jpg.

But it is not good idea to use JPG for such _drawing_ images as faxes.

Sergei,

Double clicking on the image opens directly Microsoft Internet
Explorer without the option of selecting another editor - and with
IE I cannot rotate. Is there a setting somewhere where I can define
the editor?

Thanks!

It means that PNG extention is associated with IE.
You need associate it with image editor.
The simplest way is to download and install IrfanView,
and associate PNG with it during installation.

Hello VLAD,

Monday, August 15, 2005, 3:00:13 AM, you wrote:

V> Hi!
V> Please tell me ALL macros from AATEST for CWType
V> e.g. ~[iCall]

=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

2931. CwGet ruler

Yahoo group: dxsoft
Date: 2005-08-16 13:24:00 UTC
From: KC8YOL-Tom
Topic: 2931 Message: 2931

The ruler at bottom of top window, you say shows frequencies of
sound. Will this be the sound that I am receiving in hertz?
Example..if I hit GotoMax and the red line is at 900 on the ruler then
I am receiving 900Hz? Would you say that a typical CW signal is about
600 to 700Hz?
Thanks
Tom

2934. Avery 5389 4"X6" Postcards Design with AALog.

Yahoo group: dxsoft
Date: 2005-08-17 21:20:37 UTC
From: hz1yb
Topic: 2934 Message: 2934

Hello,

I like to design my own QSL cards. I have been using Avery 5389 4"X6" postcard sheets with my laser printer. I have used the Avery sheets with other logging programs that has this featue.

However, I faced some difficulties making similiar designs with AALog featue. Has anyone managed to make designs with the QSL label printing
featues of AALog. If so, could I have a sample or copy of such a template that I can modify and replicate.

Thanks.

Topic: 2931 Message: 2935

Interesting survey - what frequency suits most peoples ears when listening to CW and what frequency (bfo) do most operators set their txer to for transmitting cw. Does it change with age?
I use an FT900 and to adjust it I have to get round the back ...eh no sorry that's to adjust the volume ... no to adjust the offset frequency (bfo) I have to do some odd pushing of various buttons on the rig and the value is shown on the display. This I don't do too often. I set it to about 700Hz. Why? .... well the rig has a 500hz filter for CW which sits between about 400 and 900 Hz up from the carrier so 700 is somewhere in the middle and I like to transmit at about the same frequency as some operators have even narrower filters 250 or even 100hz. They would miss my answer to their call if I wasn't on the same spot for Tx & Rx. Also 700hz seems to be the most pleasing to my ears. The get CW display is great for checking how good the filter is also! I think you can adjust the frequency to find where a dx station is listening by monitoring which frequency he is selecting calls to answer in a pileup and adjust your receiver (or its transmitter frequency) to get in the middle. This is something you can do with getcw but not so easily with untrained ears.

Am I right or am I right I would like some feedback from some more experienced CW operators about this as my findings and views are from playing with radio's and may be completely wrong?

regards
Damian M0BKV

Ref:-
The last part of my note, what I was trying to ask was do you have any idea about what is considered the normal hertz that people use for CW.

2940. CwGet - Tone

Yahoo group: dxsoft
Date: 2005-08-21 18:15:56 UTC
From: KC8YOL-Tom
Topic: 2940 Message: 2940

In CwGet when I go to setup / sound and set tone for 700Hz, and the radio is at I'll say is at 14.012MHz & LSB when I transmit am I putting a 700Hz CW tone on the air?

Thanks
Tom - KC8YOL

You didn't transmit _audio_ tone to air at all.

Audio tone is generated in receiver as beating between received _radio_ frequency (at last IF)
and _radio_ frequency of last oscillator.

In another words, you just transmit manipulated radio frequency (no tone at all).
Tone is generated by receiver , and tone frequency is defined by receiver operator,
not by you.

Sergei,

The CwGet 700Hz tone is just what I hear from my speaker?
If you were listening at 14.012MHz you will just hear the tone you set your radio for?
If I were to use the Mic, I'm not putting words on the air?
Thanks
Tom

dear chris,
please let me know what happened to ur icome ic706? I understand it
is a superduper rig
and can directly go upto uhf? so what is the problem with the rig.
just connect a car
battery and a dipole and go on air|| so what is the problem u are facing?

Let's image that you set TRX to USB mode and tune it to 14100 kHz.

Now, if you produce clear sound with audio frequency 1000 Hz to your microphone,
TRX will generate single signal with radio frequency 14101 kHz (14000 + 1).

If your correspondent tune his rig to 14100 kHz, he will hear 1000 Hz sound.
But if he will tune rig to 14099.5 kHz, he will hear 1500 Hz sound (14100000-14099500 Hz).
If he will tune rig to 14100.5 kHz , he will hear 500 Hz sound.

The same is in CW mode.
In CW mode TRX tramsmit single frequency (not modulated by sound).
By tuning receiver near transmitting frequency we can hear sound with
any of frequencies, which can pass via RX filters (i.e. about 300...3000 Hz in SSB mode
and
about pitch tone in CW mode).

KT> Does this change any or part of your answers to me??

If you use CwType to keying your rig in CW mode, "tone" setting change only tone
which _you_ can hear from internal speaker or soundcard.

If you use soundcard output to generate CW in SSB mode (not very good method though),
tone will be offset of frequency.

I.e. if tone=700 Hz, mode=USB and rig display frequency is 14000 kHz ,
real CW frequency is 14000.7 kHz .

You need install OmniRig software (or Hamport with OmniRig) as described in documentation at first.

cm> I donot get a signal.

If you don't see signal in specrogram and oscillogram windows, set up your soundcard:

Select signal source (line in or microphone input) and
record level by Windows ("Volume" in tray):

Double click on "Volume" ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

Make sure that you change _Recording_ options, not _Playback_ options.

2951. CwType 1.37i

Yahoo group: dxsoft
Date: 2005-08-23 10:43:51 UTC
From: Sergei Podstrigailo
Topic: 2951 Message: 2951

Hello All,

Current beta-version of CwType (just exe-file, without installer)
is available as http://www.dxsoft.com/cwtypeb.zip

1. More convenient input window behavior was made (like TRueTTY).
2. Ctrl/+ , Ctrl/-, Alt/+ , Alt/- at main keybourd can be used to
change CW speed now.

Sergei,

I read the instructions a few times
I have rigblaster plus, the radio is Icom #ic-718
I set CwType PTT on RTS and CW keying on DTR per rigblast..book
When rig is in CW I don't TX
In LSB/USB or RTTY then it will TX
What do you think I have over-looked?

1. Check if select used COM-port in Setup/Interface.
2. Make sure that you select "COM-port via Windows API" option.
3. Make sure that Rigblaster+ CW output is connected to transceiver
input for straight CW-key.

Yes I have done that.
It sort of works but it is not an eligant solution and is not practical if the band is busy or a station comes on between your contacts freq and your send freq.

Cheers: Nigel

KT> No wonder CwType would only work in LSB/USB
KT> One more question, what is power1 & power2 used fore

They used if interface takes power from port pins, as pull-up resistors in LPT-interface.
If you select pin as "power", CwType will set it to high always.

2962. AALog - reinstall log files with computer upgrade?

Yahoo group: dxsoft
Date: 2005-08-25 23:51:03 UTC
From: kristinnandersen
Topic: 2962 Message: 2962

Hi:

I am a registered user of the latest version of AALog. I have upgraded to a new computer and re-installed AALog there. Now, I have also copied my log files (I have one for each call sign I have been using) to the new computer.

Is there any way I can make the new installation of AALog read my log files? It is not as simple as File / Open Log /..., as I can not point to the log files from there.

The Configuration / Logs configuration menu may be the solution, but even there I run into trouble.

Does anyone have a suggestion on how to upgrade AALog and associated log files to a new computer?

If you installed program and copied log files then you need only
add logs in the Log list. Create new log and select existing log file
as log file name. Describe it select log set e.t.c.
When you attach all logs Select Tools|Refresh databases to renew
statistic.

Best regards,
Alexander mailto:aia@...

2964. ANSR record attempt

Yahoo group: dxsoft
Date: 2005-08-26 21:25:26 UTC
From: James
Topic: 2964 Message: 2964

Arizona Near Space Research (ANSR) is pleased to announce the flight of ANSR-25. This high altitude balloon flight will take place on Saturday,
September 3rd at 8:00 AM MST (1500 UTC).

The launch site will be announced closer to the flight date and will be based on winds aloft.

The balloon will be a 1200-gram weather balloon, filled with helium. The expected burst altitude will be 90,000 feet or more. The flight is anticipated to last about 2.5 hours from launch to touchdown.

The flight will be an attempt to set three (3) records as part of the 2005 Onset ARHAB (Amateur Radio High Altitude Ballooning Record) competition. The portion we are attempting on this flight includes:

1. VHF/UHF Greatest Telemetry Distance (APRS on 445.950 MHz)
2. HF Greatest Telemetry Distance (PSK-31 on 14070.450 KHz)
3. Greatest 2-way QSO Distance (Cross Band Voice Repeater)

We are requesting your assistance, especially distant stations, in our attempt to set these records. We encourage and greatly appreciate everyone's efforts in forwarding this announcement to anyone, local or DX, who may be interested in participating, as well as cross-postings to users groups and your favorite Amateur Radio websites, weblogs, reflectors, etc.

VHF/UHF stations in Southern California, New Mexico, and Colorado mountain tops would work best for the 2-way QSO and telemetry attempts.

Stations 800-1200 miles down range from Arizona would have the best shot at hearing our PSK-31 HF beacon. See the following propagation maps for best listening locations.

http://www.kd7lmo.net/psk31_propagation.html

The following is the payload frequency plan:

Cross Band NB-FM Voice Repeater
Input: 145.560 MHz/162.2 Hz PL tone
Output: 445.525 MHz

APRS when repeater not in use on 445.950 MHz at 10, 20, 40, and 50 seconds GPS time via KD7LMO-11

Landing prediction after burst at 15 and 45 seconds GPS time via KD7LMO-0

Linked to IRLP reflector 9255 * See Note below

Pico Beacon APRS:
445.950 MHz packet at 00 and 30 seconds GPS time via KD7LMO-11

Our mobile cross band Digipeater will repeat the APRS data to the
144.390 MHz standard APRS frequency and thus will be I-GATED to the
Internet for out-of-area trackers. You may track the flight using
either of the following links:

http://www.findu.com/cgi-bin/find.cgi?kd7lmo-11
http://map.aprsworld.net/kd7lmo-11

The HF Digital Mode Beacon (PSK31) on 14070.450 KHz will be easily
recognized as follows: "Balloon QSL www.kd7lmo.net", followed by
time, altitude, coordinates, and signed "de AC7ZT".

Digital DX'ers are invited to respond to our beacon. Information on
our first flown HF beacon (ANSR-19) can be found by following this
link:
http://www.kd7lmo.net/ansr_19.html

PSK31 contacts are logged at:
http://www.kd7lmo.net/ansr_19_hfaprs.html

Please email your "packet received" acknowledgment to:
mgray@...

or mail your QSL card to:
James Spindler
PO Box 513
Tempe, AZ 85280-0513

Flight data logs, technical information, photos, etc. can be found at:
www.kd7lmo.net

Current flight information will be posted at:
www.ansr.org

ANSR's high-altitude ballooning email reflector can be found at:
http://groups.yahoo.com/group/Ballooning

Thank you for your participation and/or assistance in spreading the
word about ANSR-25.

* NOTE on IRLP reflector. When you connect, the node will report you
are connected to the Western States Reflector 925 on channel 5. This
channel has been reserved for high altitude balloon flights. Remember
to key your transmitter for 2 seconds BEFORE you begin to talk. Also,
when you join the node, please listen 10-15 seconds before
transmitting. The cross band repeater is also used for our tracking
and recovery team.

73's
The ANSR crew

2968. TrueTTY Waterfall

Yahoo group: dxsoft
Date: 2005-08-31 09:13:22 UTC
From: nigel314608
Topic: 2968 Message: 2968

Adjusting the waterfall to give an acceptable display takes some time,
but after many hours I find these settings are the best so far.

Hue: +1.34 +0.70
Saturation : +8.00 +6.00
Lightness: +0.70 +2.10

Your comments please
Nigel G6BIT

Topic: 2968 Message: 2970

Yes I have checked the values. Screen resolutions / types can do funny things, so what you see may be completely different to what I see. My goal was to achieve a display similar to Mix2, since the default settings with TrueTTY are not 'pleasing' to my eye. You are the first one to come back with a response, so lets see what others think.

Cheers: Nigel

From: hz1yb
Topic: 2934 Message: 2971

Hello Endre,

Yes I did. I managed to make a design that fullfilled my
requirement. The most dificult part was in configuring the label
size. After several trials, I managed to configue. Here are the size
congigurations for the Avery 5389 (Leter size) 2 4"x6" postcards:

Page Margins: All dimentions in mm
Left=31.67 Right=31.67
Top=38.06 Bottom=38.06
# of columns=1
Column gap=0 (zero)

Hope this info will help you.

Hello Alexander,

I have just uploaded a sample QSL card (not label)that worked fine with me using Avery 5389 4"x6" cards. Usuallly two cards are in each sheet. I have sent maybe over 100 QSL cards using this design and seems to be working just fine. I used AALog Label Designer for that purpose. I trust the file is accesible to everyone in the files section if anyone is intreseted in downloading it.

Hello the Group,
Being new to this group I like to introduce myself. Name is Rolf C/S PA3GFW.Because I like to make my qso's in SSB CW has got a nasty rustcolor. And because CW has dropped off the list my feelings say...pick it up again!
Last days I have been exersising with G4FON Koch's method but conditions are not perfect here behind my PC in the livingroom. Imagine what, I started to install a new shack in one of the rooms upstairs. An old 486 I think will be good enough to handle CwGet. The GAP Challenger in the backyard has to be relocated (3 metres higher) and against the outside wall of the room I intend t fasten a Jeepantenna (5 m) and a smartuner will do the job.
Now I like to ask groupmembers for their experiences with CwGet but remember that I am a newby on this program.
73' Rolf

2987. Cluster Monitor Frequency Change

Yahoo group: dxsoft
Date: 2005-09-05 17:32:50 UTC
From: hz1yb
Topic: 2987 Message: 2987

I am having a problem with Cluster Monitor frequency change. When I elect 'Go to Freq.,' nothing happens. I'm using IC-7800 and the Hamport with Omnirig works fine. I usually launch AALog that automatically launches Band Master & others. When I hit any spot on the Band Master, the rig changes to that frequency immediately with no
problems, but when I hit a spot on Cluster Monitor nothing happens.

Can anyone give me an advise as how to get Cluster Monitor change the rig to the spotted frequency?

Thank you.

2993. CwType 1.50 is released

Yahoo group: dxsoft
Date: 2005-09-09 09:26:54 UTC
From: Sergei Podstrigailo
Topic: 2993 Message: 2993

Hello All,

I have uploaded CwType 1.50 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

=========

CwType Versions History

V1.50
More convenient input window behavior was made.
"Ctrl/+" , "Ctrl/-", "Alt/+" , "Alt/-" keystrokes at main keybourd can be
used to change CW speed now.
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The "Tx at keyboard, if at least NN symbols are entered" option is made
in the MOX setup.
The ~[lf] macrosequence can be used to insert a new line (CR+LF) into
Input window now. It is transmitted just as space.
V1.36
Typo error in the "Key/PTT port pins" setup area was fixed -
pin numbers of D6 and D7 outputs of LPT-port were wrote wrong.
V1.35
Documentation was updated.
Some minor changes were made.
V1.34
The "Setup" menu was fully rewritten.
RigExpert interface and control via OmniRig are supported now.
Some minor options were added.
Some minor bugs were fixed.

[...]

From: J. Reed
Topic: 2993 Message: 2994

Good morning Sergei, I just downloaded CwType 1.50 and installed it over
my previous version 1.37... and, when I use the shortcut on the desktop of
WinXP, I get the previous version 1.37 running (according to the "about" info
in the help menu...) can you help?

Subject: [dxsoft] CwType 1.50 is released

Hello All,

I have uploaded CwType 1.50 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

=========

CwType Versions History

V1.50
More convenient input window behavior was made.
"Ctrl/+" , "Ctrl/-", "Alt/+" , "Alt/-" keystrokes at main keybourd can be
used to change CW speed now.
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The "Tx at keyboard, if at least NN symbols are entered" option is made
in the MOX setup.
The ~[lf] macrosequence can be used to insert a new line (CR+LF) into
Input window now. It is transmitted just as space.
V1.36
Typo error in the "Key/PTT port pins" setup area was fixed -
pin numbers of D6 and D7 outputs of LPT-port were wrote wrong.
V1.35
Documentation was updated.
Some minor changes were made.
V1.34
The "Setup" menu was fully rewritten.
RigExpert interface and control via OmniRig are supported now.
Some minor options were added.
Some minor bugs were fixed.

It was my mistake - I forgot to change "About" window, sorry.
It is really 1.50

I just have replaced files to fixed version at both servers.

No!

The RigExpert Plus, It's hard to keep up with all these new interfaces.
Check it out its awesome.

It is fairly new device. Manufactured by the same people that make the
RigExpert and the RigExpert Tiny.

http://rigexpert.com/RigExpertPlus.html

Works great with CWGet and CWType as well as TrueTTY, but it was expensive.
Probably the most expensive Digital interface on the market, but I think its
well worth the money.

All of your software works 100% with it. I have not found any issues. I
purchased almost all of your software many years ago. All of which I still
use today.

Thanks for the great software.

Hello Group,

So far did not have any respond from group to my question related to
Short Contests short time intervals.

Please test if in Short contests section short contest period works.
For example 10min period then set in ini file TourLengh=1 . (NB! only
in new AAtestRC1). I can not set it up to work no problems at all with
older AAtest versions.
Alexander reported that everything is working, will somebody confirm
this too.

Look forward to your comments.

From: n2ybb
Topic: 3012 Message: 3012

Good day-

I have installed TrueTTY and have no problem with RTTY. But when I move to PSK31, I can receive but there seems to be no output power on transmit (although the rig does show that it is transmitting on the screen). So..... what am I doing wrong?

I have the same problem in MTTY, which leads me to believe that I am not doing something correctly.

Any ideas, please?

73,
Mike

Check you Transmit/ receive config. Also remember you are using a very norrow bandwith and you may not look as if you are getting out. I do not have my system up now as I am reworking the shack. Have someone monitor when you are transmitting see it they hear you

From: Giovanni Piaggio
Topic: 3021 Message: 3021

Hello all,
I'm new of the group, I have a question about receiving HF FAX.
Working on my PC connected to a LOWE 225 I receive quite well the
weather charts broadcasted by Offenbach and Northwood meteo.
The same does not occur working on my laptop (Skintech Pentium III 1.2
Ghz). The maps are very disturbed and unreadeble.
I noted the fan of this laptop is more noising than the PC one.
Does the notebook's fan noise is responsible of that?
Does I have to change my laptop?
Thank you for any help,
Giovanni

Did you get my answer to your personal message?

If you see only slant lines,
it means that your soundcard sampling rate is too far from nominal.

Just make slant correction ("<-/\->" button) along these slant lines and save results ...

Best regards,
Sergei mailto:sp@...

3023. CWType 1.5 soundcard timing issues

Yahoo group: dxsoft
Date: 2005-11-22 07:33:45 UTC
From: jeraldvolpe
Topic: 3023 Message: 3023

I actually wrote about this on an earlier version of CWType. My issue then and now is in how I am experiencing definite dot and dash timing issues when sending with my paddles (parallel port) and using the sound card sidetone output. Simply put there is an 'acceleration' effect of repeating dots (probably dashes too).... press the paddle and the dots come out slowly (relative) at first and then each subsequent dot comes out a bit faster. The timing irregularity is significant enough that my resultant CW is sloppy. However switching to the 'Internal Speaker' setting totally eliminates this issue and my sending is clean.

When I wrote about this before it was strongly suggested that the problem was in my computer or my sound card. Well I have two different computers and two different laptops in my shack. The are differing processor speeds (from 220 MHz to 2 GHz) but all use Windows XP Professional (SP1 with all patches). Of course the sound cards are all different. This problem exists on all four of my computers.

I guess I gave up at that point and hoped that future upgrades might somehow fix this issue. Version 1.5 is the second upgrade and the sound card timing problem is still there.

I have no suggestion, but I do believe there is a software issue here. Perhaps someone who grew up using a vibroplex (semi-automatic) bug might adapt better but I haven't used one in 30 years and I'm having real trouble.

The sidetone quality using the sound card setting is so much easier to listen to compared to the internal speaker's square-wave sound. I hope this problem has a resolution.

73,
Jerry, KG6TT
Fairfield, CA

But _why_ you don't use sidetone from your _transceiver_ ???

Yes, I know that problem with paddle+soundcard exists in some configurations.

But I can not reproduce it at any of _my_ computers.

And because sidetone from soundcard is not very impotant option, I can
suggest only two workaround so far:

1. Do not use soundcard sidetone (use transceiver sidetone).
2. Or don't use paddle, use keyboard.

A very unusual answer.
I don't want to use the transceiver sidetone as my transceivers have 'square-wave' sidetone generators too.... and I find that rough sound fatiguing at best.

As I can't always have my computer with me I prefer to keep my paddle skills going. There is also the tactile connection there.

I have been using an external keyer and paralleling the outputs. Trouble is it is difficult to sync the speed between the two and changing speeds becomes a pain. I have also inserted a sharp audio filter on the output of the computer speaker to cleanup the sidetone that way....

It is strange that you are unable to duplicate this timing issue as my four computers are pretty main stream in their configuration. Can you recommend a configuration that you know by experience actually works correctly?

As a very active VE here in Northern California... and one that strongly encourages the learning and use of Morse Code... I routinely recommend certain programs and CWType and CWGet are two of those.... It is my hope that someday you will discover the cause of this timing problem and fix it. The pleasantness of the soundcard generated sidetone and the option of continuing to use my paddles with the

keyboard are important to me.

Best regards,

Jerald, KG6TT
Fairfield, CA

3029. SeaTTY contrast

Yahoo group: dxsoft
Date: 2005-11-27 01:01:15 UTC
From: Mike McCoy
Topic: 3029 Message: 3029

I'm brand new to receiving HF (weather) fax on my sailboat. I just downloaded/registered SeaTTY today because for some reason it was the first program I've been able to get to 'work'.

Here's my dumb question: Oddly, It seems have to manually tune to the carrier to receive a fax. Per the NOAA Wfax publication:

"Unless otherwise stated, assigned frequencies are shown, for carrier frequency subtract 1.9 kHz. Typically dedicated radiofax receivers use assigned frequencies, while receivers or transceivers, connected to external recorders or PC's, are operated in the upper sideband (USB) mode using carrier frequencies."

For example, I want to receive a NOAA wfax that is broadcast on 12789.9. Even though my (Icom M-700) mode switch is set for USB I can only receive if I tune the SSB to 12788.0 (1.9 Khz down). If I tune the M-700 to the published frequency (i.e. 12789.9) I won't receive the fax.

I suspect this 'mistuning' is also why received faxes are not high contrast (black/white) but more a two tone dark/light grey?

I can't imagine NOAA publishing freq's and expecting mariners to subtract 1.9 Khz from their published freq's all the time. What am I missing/not getting here?

Hello A

Happy Christmas

> Is it necessary for you to use the same port?

Both programs control the same device (PTT on the Rigblaster), so although I could use two serial ports, they'd ultimately have to "Y" into the same input on the Rigblaster. I could just purchase a second serial cable and Y adapter, and maybe even spend a little less than $25, but I was hoping for a software-based solution. Something at least conceputally the same as what "Wave Clone" does for the sound card. I'm still hoping to find one.

3043. NEW EA PSK31 CONTEST 2006 - EA4ZB

Yahoo group: dxsoft
Date: 2005-12-28 17:23:06 UTC
From: GUSANO GARCIA, JOAQUIN
Topic: 3043 Message: 3043

Hey for all:
I'm Joaquin, EA4ZB, contest manager to the EA PSK31 CONTEST 2006.

I have the pleasure to invite to participate to the FIRST EA PSK31 CONTEST, 2006, with the follows rules:

EA PSK31 CONTEST 2006
Sponsored by Unión de Radioaficionados Españoles (URE), the worldwide EA PSK31 Contest is intended to encourage the digital communications on PSK31 mode. The manager of the contest is EA4ZB.
?
Date: From 16:00 UTC March 11th to 16:00 UTC March 12th, 2006.
Participants: Any licensed amateur station.
Bands: 10, 15, 20, 40 and 80 meters, according IARU Region 1 band plan.
Mode: BPSK31.
Classes:
1) Single operator all band EA.
2) Single operator single band EA.
3) Single operator all band non-EA.
4) Single operator single band non-EA.
5) Multioperator EA, only all bands.
6) Multioperator non EA, only all bands.
Contest call: "CQ EA TEST".
Valid contacts: Any station can be contacted during the contest. Every station can be contacted once per band.
Exchange: Spanish stations: RST + Province code (see below).
DX stations: RST + QSO number starting with 001. Multi-operator stations, if used multi TX, shall report separate serials per band starting with 001.
Scoring:
On 10, 15 and 20 meters, one (1) point for QSO within own continent, and two (2) points for QSO outside own continent.
On 40 and 80 m, three (3) points for QSO within own continent, and six (6) points for QSO outside own continent.
Multipliers:
- EADX100 entities.
- Spanish Provinces.
- USA, Canada, Japan and Australia call areas (VE3, VE6, W5, JA1...).
NOTES:
1) Each multiplier counts once per band.
2) The first QSO with W, VE, JA and VK stations, on each band, counts for two multipliers (EADX100 entity + call area)
3) The first QSO with EA, EA6, EA8 and EA9 stations, on each band, counts for two multipliers (EADX100 entity + Province).
4) The use of cluster is allowed for all classes, but it is not allowed self-spotting.
5) Stations working the contest as portable ("/p") will be considered as multipliers

working in the area where the station is located as portable (for example, EA8/EA3XX counts as EA8, EA3XX/8 counts as EA8, K4XXX/5 counts as K5, VE1/VE5XXX counts as VE1, and so on).
Final score: Total QSO points by total multipliers in all bands.
Logs: All logs should be submitted in Cabrillo format via Internet to the following E-mail address: psk31@....
Logs should be sent as an e-mail attachment, not in the text of the e-mail, and the filename for the log should be yourcall.log. (EA4ZB.LOG)
A Cabrillo converter software is available free at http://www.ure.es/ftp/plantilla.zip
Deadline: All entries must be e-mailed by April 12th, 2006.
Prizes: Trophy to the winner in each class and certificate for the second and third places in each class, if the valid QSO number is higher than 50.
SPANISH PROVINCE CODE
A - Alicante AB - Albacete AL - Almería AV - Ávila B - Barcelona
BA - Badajoz BI - Vizcaya BU - Burgos C - Coruña CA - Cádiz

3044. Switcher 2.10 is released

Yahoo group: dxsoft
Date: 2005-12-29 11:11:55 UTC
From: Sergei Podstrigailo
Topic: 3044 Message: 3044

Hello All,

DXsoft switcher 2.10 can be downloaded from http://www.dxsoft.com/switcher.zip or
http://www.hamport.com/switcher.zip

An /LPTxNNNN parameter defines LPT-port with non-standard base address
(for example, LPT-port at PCI-card). There NNNN is hexadecimal base
address of a port, 'x' is just letter 'x', not number, for example
/LPTxE080

--
Best regards,
Sergei

3047. EA PSK31 CONTEST 2006 - EA4ZB CONTEST MANAGER

Yahoo group: dxsoft
Date: 2005-12-30 16:31:21 UTC
From: GUSANO GARCIA, JOAQUIN
Topic: 3047 Message: 3047

Hey for all:

I'm Joaquin, EA4ZB, contest manager to the EA PSK31 CONTEST 2006.

I have the pleasure to invite to participate to the FIRST EA PSK31 CONTEST 2006, with the follows rules:

EA PSK31 CONTEST 2006
Sponsored by Unión de Radioaficionados Españoles (URE), the worldwide EA PSK31 Contest is intended to encourage the digital communications on PSK31 mode. The manager of the contest is EA4ZB.
?
Date: From 16:00 UTC March 11th to 16:00 UTC March 12th, 2006.
Participants: Any licensed amateur station.
Bands: 10, 15, 20, 40 and 80 meters, according IARU Region 1 band plan.
Mode: BPSK31.
Classes:
1) Single operator all band EA.
2) Single operator single band EA.
3) Single operator all band non-EA.
4) Single operator single band non-EA.
5) Multioperator EA, only all bands.
6) Multioperator non EA, only all bands.
Contest call: "CQ EA TEST".
Valid contacts: Any station can be contacted during the contest. Every station can be contacted once per band.
Exchange: Spanish stations: RST + Province code (see below).
DX stations: RST + QSO number starting with 001. Multi-operator stations, if used multi TX, shall report separate serials per band starting with 001.
Scoring:
On 10, 15 and 20 meters, one (1) point for QSO within own continent, and two (2) points for QSO outside own continent.
On 40 and 80 m, three (3) points for QSO within own continent, and six (6) points for QSO outside own continent.
Multipliers:
- EADX100 entities.
- Spanish Provinces.
- USA, Canada, Japan and Australia call areas (VE3, VE6, W5, JA1...).
NOTES:
1) Each multiplier counts once per band.
2) The first QSO with W, VE, JA and VK stations, on each band, counts for two multipliers (EADX100 entity + call area)
3) The first QSO with EA, EA6, EA8 and EA9 stations, on each band, counts for two multipliers (EADX100 entity + Province).
4) The use of cluster is allowed for all classes, but it is not allowed self-spotting.
5) Stations working the contest as portable ("/p") will be considered as multipliers

working in the area where the station is located as portable (for example, EA8/EA3XX counts as EA8, EA3XX/8 counts as EA8, K4XXX/5 counts as K5, VE1/VE5XXX counts as VE1, and so on).
Final score: Total QSO points by total multipliers in all bands.
Logs: All logs should be submitted in Cabrillo format via Internet to the following E-mail address: psk31@....
Logs should be sent as an e-mail attachment, not in the text of the e-mail, and the filename for the log should be yourcall.log. (EA4ZB.LOG)
A Cabrillo converter software is available free at http://www.ure.es/ftp/plantilla.zip
Deadline: All entries must be e-mailed by April 12th, 2006.
Prizes: Trophy to the winner in each class and certificate for the second and third places in each class, if the valid QSO number is higher than 50.
SPANISH PROVINCE CODE
A - Alicante AB - Albacete AL - Almería AV - Ávila B - Barcelona
BA - Badajoz BI - Vizcaya BU - Burgos C - Coruña CA - Cádiz

3048. CWType and Winkey version 10

Yahoo group: dxsoft
Date: 2006-01-02 07:00:12 UTC
From: jeraldvolpe
Topic: 3048 Message: 3048

Wondering if there have been any requests for the addition of adding WinKey (K1EL) control in CWType? Most logging programs recognize WinKey as does Ham Radio Deluxe and MixW... probably others.

I have built several LPT interfaces and use CWType regularly in my shack . However, my logging program (ACLog 2.9) now supports WinKey so I'm going to add the WinKey hardware for better keying characteristics during contesting. It would be cool if CWType could address WinKey too as an option so people like me would be able to move more seamlessly between CW capable applications.

If you are unfamiliar, K1EL sells both kit and assembled versions of this keyer and has full documentation on how to integrate and use it on his website. I know that he works personally with all vendors who wish to add its access in their applications.

Just a thought.

3049. seaTTY v1.60

Hi Marcus,
On my boat I use a Realistic/ Radio shack DX 394. SW receiver. It's
not a marine unit but works fine and is powered from 12v.
Normal price second hand about $100. Always a few on EBay.

3052. PROBLEMS WITH LOGGBOOK IN CABILLO FORMAT

Yahoo group: dxsoft
Date: 2006-01-19 12:33:44 UTC
From: EA4ZB
Topic: 3052 Message: 3052

Hey all:

I need aid with a problem with the cabrillo format.
Standard cabrillo used like MODE: PH (phone), CW and RY (rtty).
In some aids in psk31, when exporting log to cabrillo, takes way RY,
although the aid is in PSK31. The question is: when mattering log in
format cabrillo with the mode RY, ours logbook does not know if the contact
has become in RTTY or PSK31. If we exported to ours logbook in mode RY
logbook it thinks that they are done in RTTY, when they have been really
done in PSK31.
Somebody has had east problem?

Hi Sergei,

I do not mean software bug, no worry about it :-)

I mean, is it possible to set CWType to mimic a semi-automatic keyer (usually called 'bug'). 'Bug' has a rather special rythm, because dots are produced automatically but the dashes are made manually. Hence, the dashes may have variable duration/length.

Well, it is really "bug" :-)

No, CwGet doesn't support this mode.

Any "special rhythm" is just BAD manipulation.
I don't see reasons to help to make bad signals...

Let's read description again:

SELFEC SITOR, AMTOR-ARQ (SITOR-A) and DTMF-code _decoding_ is also possible.

o> Is it possible using TrueTTY and a PC soundcard?

TrueTTY can _decode_ (receive) AMTOR-ARQ, but can not transmit.

3059. AATest in 160 mt contest

Yahoo group: dxsoft
Date: 2006-01-25 19:05:04 UTC
From: Mauro
Topic: 3059 Message: 3059

Hello,

i have a question using AATest in CQ 160 mt Contest.

The contest exchange must be report and prefix or country abbreviation.
example;
a DL station will exchange 599 DL or 599 FRG

Is there any possibility to set-up AATEST to offer good country
abbrev. in to exchange field?

thank you

73s Mauro IN3QBR

Thank you Alexander,

i understand , but my question was about the received report.
I belive that an .dom file must be write (this i can do)

when i log a DL station the program can submit me in the received
field 599 FRG automatcally.
if is ok i log it, if not i rewrite the field as 599 DL.
As in WWDX that the program suggest you the Cq zone.

Sorry but is very hard to explain !

Best wishes

Mauro IN3QBR

Ok. I see now. For cq ww 160 suggest abbrev. for received exchange too
hard. For example for EU Russia i heared ER/UA/UA3

Hello again Alexander,

i belive that the more common use abbrev. can be ok.
for Russia UA is good.

OK. Then I need prepare this list (hi). For example I NEVER heared South
American stations on 160 and can't imaging what they send as exchange.

Alexander,
perhaps we can take a shortcut,

I did some experiments with TRLog.
It looks that TRlog use the abbrev. from CTY.DAT file. It is on the
end of the line with name of the country. Eg.:

Vietnam: 26: 49: AS: 10.80: -106.70: -7.0:
3W:
3W,XV,XV2G/C;

For any call from Vietnam it use "3W".
For USA/VE it uses official abbrev. of the state (like in ARRL).

If you need any help don't esitate to ask me.

3066. TrueTTY 2.52 beta is published

Yahoo group: dxsoft
Date: 2006-01-27 08:50:26 UTC
From: Sergei Podstrigailo
Topic: 3066 Message: 3066

Hello All,

I just have uploaded TrueTTY 2.52 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsign was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.

The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning

by RIT is impossible. Tuning is made via Omni-Rig software interface
(see http://www.dxatlas.com/omnirig/). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V2.37
The documentation was updated.
Some minor improvements were made, some minor bugs were fixed.

3067. New user problem

Yahoo group: dxsoft
Date: 2006-01-27 15:40:02 UTC
From: Huml Martin OL5Y/OK1FUA
Topic: 3067 Message: 3067

Hallo!

I am quite new user of AAtest and I have maybe stupid problem.
I use CwType together with AAtest. Connection between CWtype and TRX
works fine. The problem is that when I enter callsign to "C" field of
CWtype, 599 to "R" field, received exchange to "N" or "O" field, only
callsign is copied to aatest (New QSO window).
Please help me, where could be a problem?

73!

HMOO> callsign is copied to aatest (New QSO window).
HMOO> Please help me, where could be a problem?

You don't need to use CwType edit field together with AATest.
Use ~[i...] macros to get info from AATest fields.

More over, you don't need to see CwType window at all.

Macros keys work from AATest too...

=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

3072. True tty and contest module

Yahoo group: dxsoft
Date: 2006-01-29 22:02:25 UTC
From: Paul Beringer
Topic: 3072 Message: 3072

I'm trying to set up the contest module for the NAQP RTTY contest. The rules say you exchange name and state. So that's two distinct pieces of information to exchange. However, the contest module entry window that comes up for this contest only has one field for the other station exchange. The configuration for Truetty allows you to choose how the fields are filled. Catch word by one mouse click, catch word in contest mode or double click and choose from the context menu. None of these three choices will fill the entry field window with the two pieces of the exchange...name and state. Here's how I think it should work. One mouse click on the name in the Truetty decode window fills in the name in the entry window and another click on the state fills in another entry field for the state. It seems that the exchange field in the entry window of the contest module is not set up for two distinct pieces of information.

3073. CWType not remembering a Setup setting

Yahoo group: dxsoft
Date: 2006-01-29 22:47:42 UTC
From: Jerry Volpe
Topic: 3073 Message: 3073

This is probably not noticed by many but under Paddle Details I can't get the program to remember Dot AND mask and Dash AND mask changes. Maybe be other settings that are not stored but I only have to make changes with these.

[And of course I am still plagued with the dot runaway problem when using sound cards rather than internal speaker.... Recall that the dots accelerate which makes paddle movement timing extremely difficult. Doesn't matter what computer I use... desktop or laptop... the same problem exists. My workaround is placing a cw audio filter on the computer's internal speaker (with isolation transformer) to filter out the harmonic junk of the square wave sidetone. Messy workaround.]

JV> get the program to remember Dot AND mask and Dash AND mask changes.
JV> Maybe be other settings that are not stored but I only have to make
JV> changes with these.

I just tested it and found that these values are stored,
surely if "user-defined port" is selected.

But if you select another paddle port (not user-defined),
all values will be set to default values for this port.
It is behavior by design.

JV> [And of course I am still plagued with the dot runaway problem when
JV> using sound cards rather than internal speaker.... Recall that the dots
JV> accelerate which makes paddle movement timing extremely difficult.

JV> the harmonic junk of the square wave sidetone. Messy workaround.]

Yes, a method of CW keying and sound generating in CwType can not guarantee
good sound if _both_ paddle and soundcard are used.

At some computers it works good, at another it works bad...

Use Space to quick move between call an rcvd number fields
And use Enter to move cursor from Call - Rcvd exchange - Save. But you
mast configure this in the properties

HMOO> 2) Is there function (macro) as in TRlog, which insert to the CW

3080. TrueTTY 2.53 beta is published

Yahoo group: dxsoft
Date: 2006-02-10 13:51:01 UTC
From: Sergei Podstrigailo
Topic: 3080 Message: 3080

Hello All,

I just have uploaded TrueTTY 2.53 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In another mode just
an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.
The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency

is changed to consist RX frequency to TX frequency. Auto-tuning is made after click on spectrogram. Tuning can be made by RIT or by VFO according selected option. Take to attention that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via Omni-Rig software interface (see http://www.dxatlas.com/omnirig/). Hamport software (http://www.dxsoft.com/en/products/hamport/) uses this interface also.

3081. TrueTTY - HamPort - OmniRig

Yahoo group: dxsoft
Date: 2006-02-12 20:11:20 UTC
From: Jerry Bale
Topic: 3081 Message: 3081

If anyone has the time to reslove this problem with me, it would be greatly appreciated...

....

PROBLEM ... HamPort will not connect to the ICOM 746Pro Transciever on ComPort 4 while TrueTTY is connected to ComPort 4 on a Dell XPS400 computer using Windows XP... HamPort will connect to the transciever if TrueTTY has not been executed for use. (see notes on HamPort 'Client.')

What I want is the ICOM xcvr to key from the clicked 'TX' button on UA 90V TrueTTY.

....

After purchasing TrueTTY last year, the program has been used in Recieve (Rx).

Now, OmniRig and Hamport have been introduced for Transmit (Tx) keying.

TrueTTY...
Setup > Tuning > Use RIG: RIG1 ... Tune RIG:NONE. OmniRig on 'GO' appears with 'Omni-Rig' menu input as follows...

Rig IC-746 Pro, Port COM4, Baud rate 9600, Data bits 8, Parity None, Stop bits 1, RTS Handshake, DTR High, Poll int., ms 500,Timeout, ms 4000.

Using HamPort 'Client' some questions arise ...
'cw-u'appears on the xcvr as 'cw'
'cw-l' appears on the xcvr as 'cw-r'
'dig-u' appears on the xcvr as 'rtty'
'dig-l' appears on the xcvr as 'rtty-r'
HamPort will key the xcvr and set to marked other black boxes accurately to the xcvr... however, it doesn't set VFOA or VFOB to the ICOM xcvr as suggested in TrueTTY menu item "Tune Rig by".

Subject: [dxsoft] TrueTTY 2.53 beta is published

Hello All,

I just have uploaded TrueTTY 2.53 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In another mode just

an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.
The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via Omni-Rig software interface
(see http://www.dxatlas.com/omnirig/). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.

Hello Jerry,

Monday, February 13, 2006, you wrote:

JB> PROBLEM ... HamPort will not connect to the ICOM 746Pro Transciever
JB> on ComPort 4 while TrueTTY is connected to ComPort 4 on a Dell XPS400
JB> computer using Windows XP... HamPort will connect to the transciever if
JB> TrueTTY has not been executed for use. (see notes on HamPort 'Client.')

JB> What I want is the ICOM xcvr to key from the clicked 'TX' button on UA 90V TrueTTY.

TrueTTY doesn't use CAT interface for PTT switching.
It use CAT for rig frequency control only.
You need interface at COM- or LPT-port to switching.

JB> ....

JB> After purchasing TrueTTY last year, the program has been used in Recieve (Rx).

JB> Now, OmniRig and Hamport have been introduced for Transmit (Tx) keying.

This feature is not used to PTT via CAT.
It is used to connect CwType (but not TrueTTY) switching interface
to the same COM-port, which is used for CAT.

Best regards,
Sergei mailto:sp@...

Thanks for your response. A bit confused here as to the options in TrueTTY. If there is no option to key the Rig from TrueTTY, can a possibility be found. Not sure what a "CAT' might be...?

TrueTTY _can_ key a rig, but you need to read help-file completely at least ...

> Not sure what a "CAT' might be...?

It is command interface via serial cable between computer and transceiver.

TrueTTY can use this interface to change rig frequency.

But it uses _another_ interface for PTT control (TX/RX).

I have read and re-read the 'help-file at least' ... as you have suggested. Maybe I have yet to make myself clear, so that I can relate to the help file. As you have referenced in the previous response, what part of the help file have I not read. It appears that you may have not read the question, and sluffed me off to the vague help files.

OmniRig works with TrueTTY, however HamPort appears in conflict with TrueTTY - both can't access the comport at the same time. Please do direct me to any reference in the the help file where FAQs or illustrations clarify this issue.

Try to see "Connecting sound card with transceiver" chapter.
PTT-interface (TX/RX switching) is described there.

> It appears that you may have not read

Jerry,

I don't think two devices can use the same com port regardless of the device. There are two possibilities, either you can use a USB to COM port converter or add a card to your computer which can give you additional com ports. Older computers could only allow two com ports to be active at one time, while I believe the newer machines are more flexible. (this was because there were only two interrupts available).

Sergei and others...

Not having pertinent technical savy, your help has been appreciated. Will set up another port or somehow use the data and or acc socket(s) on the ICOM 746Pro to work with HamPro and OmniRig.

Just select signal source (line in or microphone input) and
record level by Windows ("Volume" in tray):

Double click on "Volume" ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

Make sure that you change _Recording_ options, not _Playback_ options.

In really it is a quote from help-file :-)

But nobody read documentation ...

From: Greg Loegering
Topic: 385 Message: 3093

Well - I did read the documentation, and couldn't see it. But now that you point it out, I see where it is now. Still think that changing some of the wording would help. Something like:

Setting up the sound card:
Double click the "Speaker" icon on the right side of the start menu bar.
Then select the dialog pull-down menu "Options->Properties".
Select the your sound card in the "Mixer Control" pull-down tab menu.
Select the "Adjust Volume for " RECORDING button.
Ensure that the sound card input used to connect your radio's output is checked (i.e. - check "Line In" if radio is connected to the Line-in input; check "Microphone" if the radio is connected to the Microphone input).

Anyway - just a suggestion.

You _need_ this driver for internal _speaker_ , but don't need for _soundcard_ output.

3097. TrueTTY 2.55 is released

Yahoo group: dxsoft
Date: 2006-03-03 09:10:14 UTC
From: Sergei Podstrigailo
Topic: 3097 Message: 3097

Hello All,

I just have uploaded TrueTTY 2.55 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In other modes just
an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
[...]

3098. import adif

Yahoo group: dxsoft
Date: 2006-03-04 18:09:07 UTC
From: dan61611
Topic: 3098 Message: 3098

I cannot import my log in adif format without nearly half of my QSO's failing to enter. They go to a "dup" file. But there is nothing different about these entries than the others, and none are dups. I have tried several date/time settings--no difference. I have tried adif files from several logging software--no difference. I have tried two different computers (XP and Win98)--no difference. This adif file loads OK on other logging programs.

Please--what do I do next? Can I send you the adif file to look at?

Hello Sergei,

DGPS stands for Differential Global Positioning System. A simple definition from wikipedia.org is:

Differential Global Positioning System (DGPS) is an enhancement to Global Positioning System that uses a network of fixed ground based reference stations to broadcast the difference between the positions indicated by the satellite systems and the known fixed positions. These stations broadcast the difference between the measured satellite pseudoranges and actual (internally computed) pseudoranges, and receiver stations may correct their pseudoranges by the same amount. In the US and Canada, these system commonly use longwave radio frequencies between 285 kHz and 325 kHz.

Additional general information can be obtained from:

http://www.navcen.uscg.gov/dgps/default.htm

and very technical information (the type you would be interested in) in a 1.2mb pdf publication called:

Broadcast Standard for the USCG DGPS Navigation Service, is available here:

http://www.navcen.uscg.gov/dgps/dgeninfo/Default.htm

Recently in Yahoo group ndblist (196 active members), a comparison was made between NAVTEX decoders SeaTTY, TrueTTY, Skysweeper (www.skysweep.com) and a beta decoder from www.frisnit.com/navtex. In every case, the members said that SeaTTY was the best decoder under low signal conditions. When the other decoders would start to fail, SeaTTY continued to decode.

I would like to see a similar quality product from you for decoding DGPS signals. The list of DGPS stations is growing in the US and Canada, replacing the old non-directional beacons (NDB) used for navigation. I believe there would be a market for your product. The program could be very similar to SeaTTY, requiring only a computer and sound card for decoding.

You obviously turn out quality products, one more should be fun for you.

If you need more information, please let me know.

Spasibo.

Sorry for butting in here, but what would be the purpose of decoding a DGPS signal? As I understand it, it provides correction information to the received GPS signals from the GPS satellites and is used to provide a correction in a GPS receiver so it can produce a more accurate position. This correction is derived by a fixed site receiving the same satellite signals and, comparing the derived position with its accurately known position, is able to calculate a correction. This is what is broadcast as a differential signal to suitably equipped GPS receivers so they can add the difference to the derived position they have calculated to produce the more accurate result.

If this is correct, then what would be the purpose of decoding the data from the DGPS signal, since is providing only the error part of the picture needed to calculate the actual position of the receiver?

DGPS has largely been superseded, for navigation use, by a "WAAS" correction signal broadcast from a geostationary satellite. Modern GPS receivers include WAAS correction rather than DGPS, which needed a second receiver.

John

Sergei,
I have searched extensively for the RTCM-SC104 document on the web. Disappointingly I came to the same conclusion that you did, the document does not exist for free. Apparently it is proprietary information or contains copyright information so they want money for it.

My need for a DGPS decoder is strictly for hobby use and I am not prepared to make a large investment into it. I therefore drop my request for the decoder at this time. Thank you for considering the issue.

As I said in a previous post, your products are highly rated. If there is a change in the document availability, perhaps the issue can be brought up again. Thank you.

Al

Hi John,
My purpose for decoding a DGPS signal is strictly for hobby purposes. Leading the body of the DGPS correction message is a station identifier code which is used to determine a location for the DGPS station. This is all that I'm after. The ultimate goal is to try for as many stations as possible and at a far distance. So far I have 49 DGPS stations logged, the furthest being in Washington, New York, and Puerto Rico, at over 2,000 miles away. It is very similar to searching for non-directional beacons (NDBs). The most distant NDB I received is from Isla de Pascua (Easter Island) off the Chilian coast, at 3,990 miles distance.

Your statement about DGPS being superseded by a WAAS correction is interesting. The US is testing for additional DGPS stations to be installed. It is odd that they would do that is something better exists. But then our government can be a bit funny at times. I don't know what WAAS is so I will do a bit more checking into it. Thanks for the information.

Hi Sergei,

A lot of useful information about the workings of this mode can be found
on Klaus Betke's website at:

http://www.longwave.de/104.pdf

73 for now, Alan (another DGPS chaser currently using Skysweeper for this
mode!)

Sergei,
In the Files section I created a folder called KA5JGV. I placed 4
files into this folder:

angleton1.wav
angleton1.txt
bobo1.wav
bobo1.txt

The wave files are captured in PCM format, 11.025kHz, 16-bit, mono,
and 21kb/sec. The text files are the DGPS decode of the respective
wave files. Please note that there are some errors in the wave files.
These can easily be seen in the text file decode. Also note that
angleton tranmits at 100 baud and bobo transmits at 200 baud.

If you need additional files or information, please advise.

Al

Thanks, files looks very good.
At least my FSK decoder gets good bitstreams from them...

Understood - I play also :-) I've used SeaTTY to decode Navtex broadcasts here in Scotland from Tallin, Estonia on a receiver with an inbuilt ferrite antenna.

However, perhaps DGPS should be looked at as a feature of TrueTTY rather than SeaTTY since the former is, in my opinion, the hobbyist package. SeaTTY is the version tailored for use by the boating community, primarily for Navtex and Weather FAX so shouldn't be encumbered with features that fall outside this model. The reception of DGPS in this market would be covered by a position-finding feature of a GPS receiver.

John

3113. Re: SeaTTY : Weather forecast decoding for mariners

Yahoo group: dxsoft
Date: 2006-03-10 12:43:06 UTC
From: Roger Proust
Topic: 3099 Message: 3113

Hello John, Serguei and all,

I agree with John, SeaTTY must be reserved to weather reception
forecast for the sailors or mariners. The reception of the DGPS is an
other problem and will complicate the use of SeaTTY.
I use on my sailing boat NavtMsgs (freeware of Gerad Hageman) with
Seatty (very excellent decoder, I thinck one of the best)associated to
a Sangean ATS 909 receptor for almost five years.
So I can decode everywhere and very well Navtex, RTTY/Synops (on a
chart that you can moove the scale), Weather fax.I can also register
with NavtMsg the weather forecast speaking.
I recommend the couple "NavtMsg (freware)+SeaTTY" and many french
people use them with a great satisfaction. See the folowing links:

NavtMsg Home:
http://home01.wxs.nl/~hagem358/

NavtMsgs in english:
http://home01.wxs.nl/~hagem358/NavtMsgs_E.htm

NavtMsgs in french:
http://home01.wxs.nl/~hagem358/NavtMsgs_F.htm

NavtMsgs in dutch:
http://home01.wxs.nl/~hagem358/NavtMsgs_N.htm

In a few days there will be a new NavtMsg version improving "plotting"
Synops temperature or wind (force and direction) reports like Grib files.

Regards

Roger

PS:
John, can you tell me what kind of inbuilt ferrite antenna you have
used.If you have a skecht...Thanck you.

Hi Sergei,

Al has uploaded some files, so I won't send any more, but if you should wish to try it with 'live' signals you can find them between 283.5 kHz and 315 kHz in Europe. The channels are spaced at 500 Hz intervals, and it's likely that there will be some in your vicinity, a full list of these can be found on my website in an Excel Database at:

http://www.beaconworld.org.uk/download.htm

I would certainly have no problem if this mode could be decoded by TrueTTY rather than SeaTTY, both are very useful programmes, but I do appreciated that non-radio hobbyists might want to use SeaTTY in a totally different way to what we do.

DGPS signals can travel a surprisingly long way, Canadian signals are received almost nightly here in north west England, and I've even heard one in the US and Puerto Rico before now. As far as I know the only two programmes able to decode this mode at present are Skysweeper and RadioRaft.

Thanks for looking at this mode, much appreciated!

73 for now, Alan.

Hmm, I already _answered_ you.

SeaTTY doesn't know nothing about help-file, it just ask Windows to show it.

So if your Windows can not print a file, SeaTTY can do nothing...

Current version of SeaTTY can not decode such messages.

If you send me some sample wave-files ,
I probably will do research to implement this mode to SeaTTY or
another software.

These samples are decoded easy:

ZCZC-WXR-CEM-001073-001043+0600-2481926-KBHM/NWS-

ZCZC-CIV-TOE-051107+0130-2002019-KLWX/NWS-

ZCZC-CIV-TOE-051107+0130-2002019-KLWX/NWS-

ZCZC-CIV-TOE-051107+0130-2002019-KLWX/NWS-

NNNN

NNNN

NNNN

But I wonder if these messages are really interesting for SeaTTY users...

m> If I put [csnt] and [cl] before [rx] they work but [rx] does not!

Probably you want this macros: "~[tx] cqcq dewd4pxq wd4pxq k`[csnt]`[cl]`[rx]"

Fill difference between ~[and `[.

~[macros are execute in the same time when you click macro key,
before placing text to Input window.

`[macro is execute when it should be "transmitted".

If you have software MOX enabled, extra symbols after `[rx]
will make TX on by MOX.

Sergei,
My MOX is un-enabled

From your reply --
Probably you want this macros: "~[tx] cqcq dewd4pxq wd4pxq k`[csnt]`[cl]`[rx]"
This OK except `[rx] did not work for me

What I have done to get what I want, is remove `[rx] from your suggestion and enable MOX
and un-check all MOX Setup items but the last one - TX Off
All is OK now
Thanks VY much for help!
Tom

3134. SeaTTY

Yahoo group: dxsoft
Date: 2006-03-25 14:12:49 UTC
From: n1cpchris
Topic: 1951 Message: 3134

I purchased this software a few weeks ago and have had several questions. When I purchase software, I generally expect comprehensive documentation and when it is lacking, as it certainly is here, I expect competant technical support.

The responses I have had from technical support have been short, cryptic, incomplete, and barely understandable and certainly not helpful.

If there is someone out there who understands this program, especially as to how it interacts with the sound card, I would very much appreciate a direct contact off list.

I don't know where else to turn. Apparently there is no such thing as "DX Soft" (at least there is no contact information available) and no way to contact anyone except through the technical support email.

Sincerely and 73
Chris Black

Ops!
Yes, I am wrong, because `[cl] command clears all text, and `[rx] too.

If MOX is disabled, proper macro end will `[rx]`[cl] ,
i.e. "RX, then clear".

Another way is to add ~[lf] macro to the end of text,
because CwType and TrueTTY erase sent string if it is ended by Line Feed.

Hello Chris, Serguei and all,

I used Seatty with the freeware NavtMsg of Gerard Hageman for almost 6 years on my sailing boat in mediterannean sea, with a Sangean ATS 909 radio. I thinck SeaTTY is one of the best demodulator software for decoding Navtex, RTTY/Synops, Weather Fax.
I recommand you to downdload the freeware NavtMsg (working with SeaTTY) that has a very complete and comprehensive help (for NavtMsg and SeaTTY) and shedule programm broadcasting. NavtMsg automaticaly configures SeaTTY for each reception mode. You can also register on your your HD weather forecast listened to your radio. All the decoded messages are registered and shown in the multipurpose message wiewer of NavtMsg.
Chek the following links where you can download NavtMsg and SeaTTY (beware to the installation of SeaTTY directly under C:\Program Files\NavtMsg folder):
http://home01.wxs.nl/~hagem358/
http://home01.wxs.nl/~hagem358/NavtMsgs_E.htm

You have also a demonstration of signals Navtex, RTTY and Fax:
http://home01.wxs.nl/~hagem358/NavtSono_Inst.exe

Regards

Roger Proust

3139. Cabrillo report in AATest

Yahoo group: dxsoft
Date: 2006-03-28 05:17:18 UTC
From: Adhi Bimbo YC3MM
Topic: 3139 Message: 3139

Hi all,

Is it only happened to me?
During last contest of CQ WW WPX, I logged a station in wrong
band. I logged into 160m. After contest I corrected this station into
right band, 40m.
In the "Contest QSO List" and also "Contest Statistic" it mentioned
OK. The band changed from 160m to 40m.
But when I made report of Cabrillo, this station is still remained in
160m.
I must check and changed all Cabrillo reports manually.

I am using AAlog contest module v.1.0 RC 1

Please comment. Thanks, 73.

3145. SeaTTY 1.65 beta is published

Yahoo group: dxsoft
Date: 2006-03-29 09:33:31 UTC
From: Sergei Podstrigailo
Topic: 3145 Message: 3145

Hello All,

I just have uploaded SeaTTY 1.65 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.

See details about SAME at
http://www.1stconnect.com/anozira/SiteTops/technology/noaa-nwr-same.htm

If you have downloaded SeaTTY from our site www.dxsoft.com or www.hamport.com ,
you need to complain antivirus software vendor to fix this "false positive" error.

Hello Francis et Serguei,

Sorry Sergei, it is exceptionnaly in French, but I know you can
understand.
Francis vous avez vraiment un problème de configuration sur votre PC
et avec votre antivirus (Norton?...)Désactivez le, ou configurez le
correctement et/ou changez le par un autre gratuit, il en existe de
très efficaces maintenant. J'utilise NavtMsgs avec SeaTTY depuis près
de cinq ans sur window Me, 2000, XP et je n'ai jammais eu de Pb.
Vous pouvez me contacter si nécessaire en français sur le site suivant:
http://www.stw.fr/dt/display_dt.cfm?dt=496
I am the french translator of NavtMsgs
NavtMsgs:http://home01.wxs.nl/~hagem358/NavtMsgs_E.htm

Hi Alexander,

The article is a review of your AALog programme by Steve Telenius-Lowe, 9M6DXX/G4JVG, and appears in the latest (May 2006) issue, which arrived here just a couple of days ago. The article runs to two pages, and is very comprehensive (the author is a former editor of the magazine), and shows various screen dumps of the programme, and gives an overview of its performance.

The bottom line, which I'm sure you're most interested in, says that the programme is thoroughly recommended.

I have now uploaded a copy of the article into the group 'files' area.

(This is a re-post my last posting never made it for some reason!)

73 for now, Alan.

3163. AALog V2.47 - Award manager problem.

Yahoo group: dxsoft
Date: 2006-04-17 11:05:30 UTC
From: Paul Shayler
Topic: 3163 Message: 3163

Hello,
I'm using AALog V2.47. I have encountered a problem with the Award Manager function. The problem is that if I log a contact on 144 MHz it is shown as a contact on 14 MHz if checking for WPX using the Award Manager function. Any idea of a fix for this problem?

Regards, Paul S.

From: ik0clm
Topic: 3164 Message: 3164

All ok for measure swr..
but...but
if i have big issues if i wish to measure resonant frequency of a trap
I have a sure trap on 7 mhz...I try in more ays to measure it ..but don't succeded..
so..
i try with few wires linked to connector antenna of the mfj and put them near the trap..or more..enveloping the trap but the result was a resonant lc parallel ciruit (Z >>>>) on different frequency and depending from the relative position of the wire cable and the trap...
so..unrelaible and wrong reading ..!!
I wrote also to MFJ ..but noone replies..!
can you help myself ?
tks

3168. Correcting "Edit selected" errors

Yahoo group: dxsoft
Date: 2006-04-18 01:56:44 UTC
From: Paul Beringer
Topic: 3168 Message: 3168

I would like to null out some editing errors in the note field I've made to QSO's. These are primarily contest q's that I edit after importing them from my contest program. (TRlog) I edit them in bulk but want to re-edit them. The problem is, when you edit a selected list of contacts, whatever note you type in the field is added to the beginning of the note field. The original notes remain. I want to delete the original notes and replace them. How do I do that?

It's bug with 2.47. If you do not need read freq from trx then you can
replace value 144 in the bands.aal with 2M value and replace 144
values in the log using group edit operation.

Best regards,
Alexander mailto:aia@...

3171. AATest problems in network mode

3172. SeaTTY 1.70 is released

Yahoo group: dxsoft
Date: 2006-04-27 07:07:44 UTC
From: Sergei Podstrigailo
Topic: 3172 Message: 3172

Hello All,

I just have uploaded SeaTTY 1.70 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V1.70
Minor improvements of raw log files handling were made.
V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
V1.50
The documentation was updated. Some minor bugs were fixed.
[...]

From: W. Curt Deegan
Topic: 3172 Message: 3176

I notice since installing V1.70 that every once in a while the Rx window will suddenly scroll through all of its accumulated contents, ending back where it started, usually. When reading back through the contents of this window, if one of these scroll events happens, it is likely you will not be back where you were.

Is this a bug? It is certainly disconcerting. I never noticed it in earlier versions.

WCD> Is this a bug? It is certainly disconcerting. I never noticed it in
WCD> earlier versions.

I am afraid that I didn't quite understand your question...

RX window behavior is not changed -
if last line of text is visible, autoscrol is on, if last line is not visible, autoscroll is off.

Sergei,

Thanks for your reply.

The problem is not with autoscroll in normal operation, that works as usual.

The problem is that the Rx window scrolls through it's entire contents
suddenly, every once in a while, for no reason at all. It is like it lost
track of what it was doing and scrolls through the entire buffer until it
again reaches the last line of received data, then continues on as usual.

I don't know how else to describe it. The window will be acting normally
and then without any intervention the contents are scrolled through in a
couple seconds time until the bottom is reached, operation then proceeds
normally until the next time it goes crazy.

I never saw this with the previous version I had been running (the one
before the SAME changes), so the behavior for me at least has definitely
changed. It may not have been intended to change, but it has changed.

I understood.
It appears during visible buffer cutting (deleting old strings).
It is a problem of new component for new compiler version.

Will try to avoid it.
You can click to File/Clear buffer so far...

Thanks, Sergei.

I had noticed the scrolling didn't start until the buffer had been filling
for a while, and that clearing the buffer stopped the scrolling, but also
only for a while.

I have also just noticed that if one is viewing the Message Window when one
of these "scrolling events" takes place, that window is also scrolled and
left somewhere other than the position previously being viewed. I assume
these two problems are related.

Now that you're aware of these, both the RX and Message window problems can
no doubt be dealt with at once.

3182. Anybody familiar with Australian weatherfax?

Yahoo group: dxsoft
Date: 2006-05-13 14:23:08 UTC
From: klaus_norbert
Topic: 3182 Message: 3182

Hi everybody, I'm new here, Klaus is the name.
I just purchased the SeaTTY program and am planning to use it to receive weatherfax charts on my boat.
Its all very new to me so I'm wondering if somebody could give me the right program settings to get a useful FAX image.

I connected it all up today on my boat, using a Yaesu FRG8800 receiver and a laptop computer. For an antenna I hoisted a dipole, cut for the 20m amateur band, one end at the mast top, the other at the stern rail.

Anyway, after much knob twiddling I managed to get a weather chart of sorts but it was a poor quality. The land outline was very blurred, the isobar lines were rather faint and the text also.
I did first receive a black background with white lines (normal setting), changing to 'reverse' produced black lines on white background. I also managed to get the slanting fixed with the correction button.
What I am unclear about is the business of the red lines on the top wave spectrum. Are the vertical red lines required to match the two signal peaks exactly? And if so, how is that done? I could shift the lines as a pair but they remained inside the signal peaks (smaller spacing than the peaks). Since my receiver has a VFO and a fine tune as well I guess it might be a case of too much control?

Details of the transmitted signal (from the weather bureau):
Bandwith white +400Hz, black -400Hz
IOC 576
scanning line density 3.8 lines/mm
scanning frequency 120 lines/minute

transmitting frequency was 10.555Mhz -there are other frequencies but this one gave the best signal.

Settings of the SeaTTY:
reverse
50 baud
450 shift
LPM 120
IOC 576
AFC 50
I used USB receiver setting

I would appreciate any general hints and what changes I should make to the above settings to get a useful weather FAX chart. As you can guess, I'm pretty green about FAX signals, hopefully you can remedy

that :-)

BTW, the M- and M+ buttons only seem to give two sizes, too small and too large for my laptop screen. Is there a way to get the size to zoom?
Klaus

Yahoo group: dxsoft
Date: 2006-05-13 16:06:00 UTC
From: ute-kloth@t-online.de
Topic: 3182 Message: 3184

Hi Klaus,

my name is Detlef Kloth, QTH is 30890 Barsinghausen / Germany near Hannover.
I am using SeaTTY together with a NRD 535, antenna is a 3m tank antenna.
The best reception is to tune your rx to the fax frequency minus 1.9 kHz in
USB mode using a bandwidth of approx. 3 kHz. Finetune your rx in a way that
the 2.3 khz signal for white is exactly at 2.3 Khz on your screen, then the black signal
automatically is at 1.5 Khz. Do not trust the automatic start/stop function,
this will not work while the signal is weak !
I managed to receive here in Germany both fax stations from down-under but not
in good quality. Have in your mind that these stations use to work with 1 kW only.

Station VMC Charleville (Australia Weather East):

Fax on 2628, 5100, 11030, 13920 and 20469 Khz. (Reception here is ok on 11030 and 13920
Khz)
Voice on 2201, 4426, 6507, 8176, 12365 and 16546 khz

Station VMW Wiluna

Fax on 5755, 7535, 10555, 15615 and 18060 Khz. (Reception here is possible on 10555 kHz)

I hope that helps. If you have further questions please contact me under ute-kloth@...

Best reards Detlef

Hi Detlef,
thank you for the quick reply. I'm bringing my boat home in a few days (she's a 26' 'trailer sailor')so I will have lots of time to experiment with your suggestions.
Wiluna is about 600km NE from here (Perth), if you can receive them near Hannover then I should have no problems here ;-).
Your 3m 'tank' antenna sounds interesting, are the details on the net or perhaps in my old copy of the "Rothammel Antennenbuch"?

dankeschoen

Klaus

Why "reverse" ?

Generally you need "Normal" position in USB mode.

Hi Klaus
the "tank" antenna comes from an old american tank (can't remember the type)to cover approx 20..45 MHz and is a simple copper tube consisting of 3 pieces to be threaded together !!!
---> no secret behind it..

best regards Detlef

3188. AA Log v2.47

Yahoo group: dxsoft
Date: 2006-05-22 12:07:16 UTC
From: David Mayo
Topic: 3188 Message: 3188

After reading the artical in RadCom, It sounded just the thing, so I have downloaded a copy and have v 2.47.
However I am unable to enter any QSOs in because no matter how I format the date, it keeps saying "Wrong date of QSO! Please enter correct value !
The date shown in the "New QSO" window is as follows :- 22 ay 06.
How can I correct this ?

Also if I were to enter details from my existing log,(adif),as the date format is dd/MMM/yy (22MAY06), will this be OK ?

Thanks in advance
Dave

3192. Re: [dxsoft] AA Log v2.47 & my PC time !

Yahoo group: dxsoft
Date: 2006-05-23 21:37:14 UTC
From: David Mayo
Topic: 3192 Message: 3192

Fisrtly, many thanks to Wolfang - DL7KI and Alexander - RZ4AG,
I thought about the time format this morning, it was dd MM yy on
this PC, and as Alex suggested, that was the problem.
(too many spaces maybe) ?
It appears to be OK now I've changed it to dd/MM/yyyy - 23/05/2006.
So now I just have to try to get used to the rest of the log.
I am actualy trying this out for a friend of mine,(G0TIP), I hope to
learn about it before recommending it to him.

There is one other thing though, I have entered George's log , in
adif format, but notice that the IOTA numbers are showing
incorrectly.
In the adif file they are correct eg. <IOTA:5>EU-001, but when
transfered they show up with only 2 numbers eg EU-00 . If this were
only a few then it could be corrected easily, but it looks like a
major job to correct a quantity. Entering NEW ones is no problem,
just those from an adif file.

This is important especially if IOTA accept LoTW confirmations,
which they may do in the near future.

Thanks again guys, the log looks very interesting, and I guess I'll
have some more questions before long.

GL, 73,
Dave, G4MUL

OK guys, I spotted the error with the IOTA file length this morning.
Easily corrected, & re-installed, just have to see how to do a backup,
and see where it goes before closing down.
Lots to check, interesting.

Dear Friends,

Myself and a few other amateurs are starting an informal European PSK Club (or more commonly "EPC"). Its purpose is to promote activity and good operating practice on the PSK mode(s) on all amateur bands. Membership is free for any licensed radio amateur. All of our managers serve on a voluntary basis. A high quality and colorful membership certificate in PDF format is sent via email to new members when membership is granted. Each new member is assigned a unique "EPC Number" which is retained for life, regardless of a change of callsign. A EPC number is never re-issued and it is listed in the Membership records forever. All EPC members are eligible to participate in various club's activities and award programmes. Please pass this information to others you think might be interested in joining our club.

The following questions are most commonly asked by those interested in the EPC or by new members:

What are the benefits in belonging to the European PSK Club? - The EPC is like any other HAM radio organization, a group of HAMs who are interested in promoting PSK mode(s). In order to keep interest up on the PSK mode(s), the idea of collecting "EPC Numbers" has been developing. Personally, each member enjoys the camaraderie of kindred spirits, whether the activity is informal rag chewing or numbers chasing or a more formal EU PSK DX Contest or QSO Party. In an effort to make EU PSK Award Programme more affordable to PSK enthusiasts, we have provided EPC members the opportunity to get both EU PSK Awards as well as EU PSK Badges at a special 30% member discount price.

How do I join and where do I get my EPC number? - Any licensed amateur authorized to operate PSK mode(s) can join EPC. There are no special requirements. Just send your information (callsign, name, address and email) to mm0dfv@... or P.O. Box 7469, Glasgow, G42 0YD, Scotland, U.K. We will assign you a EPC number and send it to you along with your membership certificate.

What do I do with my EPC number now that I have received it? - You can exchange it with other EPC members (on PSK mode(s), of course) and keep a record of their number. We are planning numerous awards for collecting EPC numbers. You can just give your number to others when asked for it. It is strictly up to you as to how involved you want to get in EPC and EU PSK Award Programme.

What happens to my EPC number if for some reason I lose interest in EPC? - Once you are issued a EPC number, it is yours for life. If you decide to not participate in EPC and EU PSK Award Programme, your number is still yours. You can still give it to other EPC members and you can still collect numbers yourself.

Hallo dxSoft

We have been on your website and would like to try out the SeaTTY weatherfax programme to see that all works well with our notebook.

However, we could not find the evaluation programme for downloading.

The only download possibility was the programme for 30 Euros.
We would like first to try out the programme before purchasing.

Please indicate how we can download the evaluation programme.

Thankyou and best regards,

Paul Kinzelmann

From: gm4hqf
Topic: 3204 Message: 3204

Hello All

I am new to this group.

How do I get QSO info in CWType to enter into AALog?

I don't seem to understand the help files. The settings in cwtype.ini look to be correct but I don't grasp how the info gets saved.

I will read everything again but perhaps someone can point me in the right direction.

You don't need to use edit fields of CwType together with AALog.

Use ~[i...] macros to use data _from_ AALog input window in CwType.

=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]

In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

From: Dave Lindsay
Topic: 3204 Message: 3207

Me again

I have managed to get CWType to accept the contents of the Call, Name &
QTH fields in AALog.

It does not seem to work with the RST Sent field. I get *** in CWType.
I probably have the macro wrong but it looks ok.

I dont need AALog for contesting, just for casual QSO's

You'd better write your full macro text there.

I just have tested ~[iRprtSent] and ~[isRprtSent] .
Both are working.

3218. CW sent via sound card - legal?

Yahoo group: dxsoft
Date: 2006-07-06 19:04:45 UTC
From: k3euibarry
Topic: 3218 Message: 3218

I know that CW is normally sent by turning a carrier on/off with a key or keyer or keyboard. The radio is in the CW mode.

With the advent of digital mode programs, one can also send CW by sending a single audio tone from a sound card into the mic jack of an HF rig set for LSB or USB rather than CW mode. This will generate an RF signal that can be keyed on/off by the software. But is this legal?
Is this CW or MCW?

Let's compare this to RTTY:
One can send RTTY by sending it via FSK (changing the VFO frequency by 170 Hz) or by AFSK (sending two different audio tones that differ by 170 Hz into the mic jack of an SSB radio). Both methods are "legal" as ways to send RTTY.
At the receiving end, can an operator detect whether the sender's transmitter is set to FSK or AFSL? I don't think so.

So sending ONE audio tone into the mic jack of a radio set to LSB or USB from a sound card will produce an RF signal represented by SSB carrier frequency +/- sound wave frequency.
I have not seen anything in print in QST to say whether this is a legal way to send CW according to FCC regs.

k> legal?
k> Is this CW or MCW?

They are just two _methods_ to generate _the_same_ CW signal.
There is no difference in the air between them, if both are made with good quality.

k> Let's compare this to RTTY:
k> One can send RTTY by sending it via FSK (changing the VFO

k> At the receiving end, can an operator detect whether the sender's
k> transmitter is set to FSK or AFSL? I don't think so.

Similar there is no difference between AFSK and FSK in the air.
It is because SSB transmitter just moves signal spectrum to radio frequency.
So continious _audio_ signal correspond to continuous _radio_ signal.

k> So sending ONE audio tone into the mic jack of a radio set to LSB
k> or USB from a sound card will produce an RF signal represented by
k> SSB carrier frequency +/- sound wave frequency.
k> I have not seen anything in print in QST to say whether this is a

Topic: 3218 Message: 3221

Hi Sergei:
First, thanks for responding to my query and thank you for writing CW GET and CW Type.
I've just used both of these programs with my PC to make CW contacts using my HF rig.

I don't think the answer to my question is as simple as you are suggesting.
CW is both a "mode" (like USB, FM, AM) and a way of communicating.

How CW is generated by the transmitting radio is the question.

Certainly, AFSK has been used (legally) to send RTTY signals for years now, using either a TNC controller like a PK232 or via a sound card.
I think few operators actually send by FSK nowadays.
And all of the other digital modes (psk, pactor, etc.) that work by sending audio tones from a sound card to the mic line
of an SSB transmitter are all legal on HF bands, I suppose.

But what about sending CW by sending a single audio tone into the mic jack of an SSB transmitter?
Is this considered by (American) FCC to be a form of "MCW" (modulated continuous wave) even though there is no "carrier"?
If so, then I don't think it is a "legal" way of sending CW on the HF bands.

I've written to Steve Ford at ARRL Headquarters and he is checking into this.

The surprise to me is that I have not seen this question raised in any QST articles.
I know the method works, but I'm asking whether it is legal in America (or anywhere).

I'll forward your comments to Steve Ford at ARRL, as well as to a CW buddy of mine, W3RM.

Thanks for your help.

k> Is this CW or MCW?

They are just two _methods_ to generate _the_same_ CW signal.
There is no difference in the air between them, if both are made with good
quality.

Opinion only, not a legal opinion.

Your "normal" method of generating CW is by switching on and off a carrier.

When generated by a single audio tone, SSB produces exactly the same results - a carrier of a single frequency is created. No tone, no carrier, a tone, a single frequency. When you insert a carrier locally via a BFO (beat frequency oscillator), you create an audible tone, EXACTLY the same way that you hear an SSB signal. I don't see why this would be considered MCW - as I understand things, the classification of a transmission is determined by the transmitted signal, NOT the method of producing it.

When you listen to RTTY sent FSK vs AFSK you can't tell the
difference. Similarly when you listen to CW sent AFCW vs KCW (keyed CW)
you can't tell the difference. When you listen to MCW you can tell it
from CW. MCW is used in specific commercial applications that allow the
listener to use any kind of receiver .... eg no carrier insertion necessary.

AFCW is NOT MCW.

A question: IF AFCW was illegal how would you go about enforcement? hi hi

PS, I use it all the time

In rereading Part 97.305 and 97.307, it seems that sending CW by modulating a SSB signal with audio tones falls squarely under the definition for Modulated CW (MCW). That being the case, MCW would only be legal in the frequency segments spelled out in 97.305.

Jim, VE3CI

Jim:
Thank you for your help.
I've never heard it called AFCW but it makes sense to call it that.
I thought MCW meant you needed to transmit a carrier (AM, FM) as well as the
audio morse.
Sending an audio tone into the mic jack of an SSB radio and keying via the
keyboard and software
makes CW look "identical" to CW sent the traditional way, turning a carrier
on/off.

I was concerned with
1) is it legal
2) is the signal sent this way (sound card and SSB radio) any broader than a
traditional CW note

Dennis KG4RUL

Dear Dennis:
I don't think you are correct.

MCW means that the receiving end need not supply a bfo signal to hear the
Morse.
So sending a CW identification on an FM repeater is "MCW".
Aircraft operating on the AM band sending a morse code identifier is MCW.
In both cases, there is a carrier signal present.

But sending a keyed audio tone into the mic jack of an SSB radio (on either
USB or LSB) results
in a keyed RF frequency and there is no carrier. The receiving station would
need their BFO to hear the note.

This is identical to keying the RF carrier with your radio in CW mode,
assuming a linear amplification
and a clean sine wave.

The bandwidth might be slightly different in each case.

So... if I am correct, sending an audio tone into a SSB radio (carrier and
unwanted sideband suppressed) is
not MCW and is legal on the HF bands.

If a receiving station can't tell the difference between FSK and AFSK,
then a receiving station
could not tell the difference between CW sent by keying a carrier or keying a
sound wave going into the mic jack
of an SSB transmitter.

Am I missing something?

I've posed this question to the guys at ARRL.
Perhaps this can appear in QST soon.

One can modulate a carrier with an audio tone, but in the case of SSB
the audio tone is generating the signal rather than modulating it.

3231. Re: [dxsoft] Re: CW sent via sound card - legal?

Yahoo group: dxsoft
Date: 2006-07-09 12:45:58 UTC
From: k3eui@aol.com
Topic: 3218 Message: 3231

Dear John Littlejohn W9NET, Dennis KG4RUL and the dxsoft listserv:

Thanks for adding this bit of information about the Collins line of radios
and how they generated CW signals.
I thought some of the older rigs used to "mimic" CW by injecting an audio
tone of high purity
into the audio chain of a rig in SSB mode.

One of the technical (but not legal) arguments against doing it this way is
that in CW mode, a rig ought to operate as a Class C amplifier
with high efficiency. That is, change the bias on the finals when you change
from CW to SSB.
If you generate CW by sending an audio signal into the mic
jack of a radio in either LSB or USB mode, then the entire RF chain has to
be "linear" and hence, will be hotter and operate
at lower efficiency than if it were operating class C.

So I don't think sending audio into the mic jack of a SSB rig is a good
method to send CW.
But I wondered if it was a LEGAL method?
Of course, with the advent of sound cards and software like CW Type and
Hamscope, etc. you can easily send CW
by this second method.

Do any "modern" radios generate their CW signal by injecting audio into the
phone line?

I'm wondering if the bandwidth of such a CW-like signal (I'm hedging my bet)
would be any different
from the bandwidth of a conventional CW signal sent by toggling the carrier
on/off somewhere in the RF chain.

Would any members of this listserv like to set up a schedule with me on one
of the HF bands to try this?
I live near Philadelphia and can get on 40 or 80 meters if you are within a
few hundred miles of Philly,
or on 20 meters if you are DX. I can send CW by the two methods we are
discussing and see if YOU can hear the difference.

I'd like to take some measurements, both on and off the air, using an
oscilloscope and spectrum analyzer.
Perhaps we can substantiate that a CW signal generated by the two methods are
identical..... or not.
I am assuming a decent sound card (low harmonics) and a linear amplifier
chain in the SSB rig
and not driving the amplifier into ALC (just like operating psk).

Of course, AFSK and FSK RTTY signals are identical if the audio is clean
and the transmitter suppresses
the carrier and the "unwanted" sideband.

Please let me know if anyone wants to be part of such an on-the-air test.
Contact me directly at k3eui@...

I'm going to forward this to Steve Ford, Chuck Kolaut, and Larry Wolfgang at
ARRL Headquarters, who have taken some interest in this conversation.
Perhaps a QST article might cover this issue.

Alan G3XZK
This is assuming, of course, that the audio does not drive the radio
transmitter into the ALC region,
that the carrier is suppressed, and that the "unwanted" sideband is also
suppressed to so many decibels.

Question - what about the bandwidth of such a signal?

So.... is it "legal" to whistle Morse into the actual microphone of a radio
in SSB mode?

Barry

3234. CW by sound card debate

Yahoo group: dxsoft
Date: 2006-07-09 15:58:24 UTC
From: k3eui@aol.com
Topic: 3234 Message: 3234

Joel:
So what is the bottom line?

Is sending a single audio tone into the mic jack of an SSB radio a "legal" method
of generating a CW signal as long as the carrier and unwanted sideband are eliminated
and the rig and sound card have no harmonics of the audio tone?

I presume your answer is "yes" from your note, but it was not obvious to
the tech folks at ARRL
and West Mountain Radio folks did not want to comment either way.

What would the bandwidth of such a CW signal look like compared to turning
the carrier on/off in conventional CW?

Would the bandwidth depend on the rise/decay time of the sound wave generated
in the sound card (which varies)
as well as on the keying speed of the software?

Someone raised the next obvious question: can I just whistle into my mic
with rig on SSB and send CW by my voice?
I think we'd all agree this is not legal, since the mic changes this to a
"phone" signal or much wider bandwidth.

THIS IS AN RF SIGNAL... NOT AN AUDIO SIGNAL. iT'S AN rf signal... what is not being understood here is the carrier is filtered out. it's gone... only the signal which is the + or - of the two is getting transmitted, and that is an rf signal not an audio signal...interrupted by ur keying... or cw....
now if there's still confusion I suggest u e-mail or call the fcc and get the ansswer from the people who have the say so... I believe the arrl handbook also explains the difference between the two modes of operation...
good luck

Hi Barry,

1. You can rest assured its legal .... it has been used for many years by some reputable companies. In previous times (eg 1950's) the tone was produced by a separate audio oscillator in conjunction with a good quality SSB transmitter. Other manufacturers simply re-inserted and shifted the RF carrier to produce CW (easier and more cost effective to do so).

2. The quality of the CW note whether it is generated via the AFCW or KCW depends on the quality of the design, manufacture, and operation of the equipment; both systems are capable of generating extraneous RF products. With the advent of modern computers and sound card processing quality AFCW is now easily attainable and can be tied into the keyboard. Personally, I send CW via the keyboard .... through my home brew SSB transmitter and copy via my ear and my home brew receiver. The note is clean and completely indistinguishable from quality cw generated by keying a carrier.

Yes, you are correct about MCW; an AM transmitter is required and the MCW signal is achieved by either keying the audio or both the audio and carrier simultaneously. An AM receiver is all that is required to be able to hear a clear CW note. On the amateur bands it is indeed illegal to produce AFCW using an AM transmitter, but perfectly legal using an SSB transmitter.

Jim, VE3CI

3238. question about CW

Yahoo group: dxsoft
Date: 2006-07-09 22:13:01 UTC
From: k3eui@aol.com
Topic: 3238 Message: 3238

Dear Peter Martinez:

My name is Barry, k3eui, and I have a question that you might be able to answer since you
are so familiar with the digital modes of communication on the ham bands.

My question concerns the methods of generating CW on the HF bands.

Typically, or conventionally, a CW signal is sent by keying a carrier on/off with a key, keyer, or keyboard.
The rig is in CW "mode" and the frequency read on the dial is the frequency of the carrier.
The bandwidth of such a signal is determined by the keying waveform shape, the keying speed,
and the electronics of the keying circuit. Typical bandwidths are a few hundred Hz for high speed CW.
A lousy keying circuit produces "clicks" which take up even more bandwidth.

But there is another method that one can send a CW signal nowadays using a computer and sound card.
What if we use a computer sound card to generate a single pure sine wave, say 1000 Hz (low distortion)
and feed this audio signal into the mic jack of an SSB radio in either USB or LSB.
Let's assume that the carrier is suppressed as well as the "unwanted" sideband.
If you were to key the audio line from the soundcard, using software such as CW Type, or Hamscope, you can
produce a CW-like signal from your radio. That is, the audio just moves the RF carrier frequency up or down the band by 1 kHz
depending on whether you are in LSB or USB mode.

We know you can send CW this way, but my question "is it legal"?

This question was posed to some of the folks at ARRL Headquarters, and the answer was not obvious to them.
We've exchanged a few letters back and forth, and then I put this question on the dxsoft listserv on Yahoo
and got a variety of answers.

We know this is NOT sending "MCW" since we are removing the carrier and unwanted sideband in the SSB rig.
FM repeaters Identify by sending an MCW Morse over the repeater.
And AM aircraft send Morse by sending an audio tone over an AM transmisstion.
Both of these MCW modes are clearly not legal on the HF bands.
But what about "modulating an SSB signal with a pure single frequency sine

wave"?
Is this a legal method of generating a CW signal?

Let's compare this to RTTY.
You can generate an FSK RTTY signal by shifting the oscillator (vfo) of your transmitter by 170 Hz on your data line.
The mode switch of the rig is set to FSK, or RTTY, or DATA, or whatever the manufacturer calls it.
Some, but not all radios allow you to send FSK RTTY by this method.
This produces either one of two RF signals (mark and space) at a given Baud.

At the receiving end, the RTTY signal can be demodulated as long as it has a bfo.
The audio from your receiver can be sent to your computer card, and the software (MMTTY) prints the letters on your screen.

You can also send RTTY (legally) by sending two audio tones of 170 Hz shift into the mic jack of an SSB radio using either USB or LSB.
We call this AFSK since the radio's mark/space is generated with the rig in SSB mode by two AUDIO tones... hence audio frequency shift keying.
We are assuming the unwanted sideband and the carrier are eliminated.
This also produces a mark/space which for all purposes (if there is no distortion) is identical to an FSK signal at the receiver.

So can we do the same with CW?
Can we send a true (legal) CW signal by using ONE tone keyed on/off into the mic jack of an SSB radio?

I'd be interested in your views on this question.

And may I have your permission to post your answer on line and share it with the folks at ARRL Headquarters?

Thanks

If it were not "legal" to MIX to your final rf output frequency then
any radio that mixes to the final frequency would not be legal to
transmit cw with.

3240. Re: how to contact FCC

Topic: 3240 Message: 3240

Dear Dan Henderson N1ND
ARRL Headquarters
Regulatory Information Specialist

Thanks, Dan.

The answer to my query is much more complex than I imagined when I took this up a few weeks ago.
I began by searching the ARRL Digital Handbook but there was nothing in that text about sending CW with a sound card and SSB radio.
I'm not sure when Steve Ford approached the ARRL lab guys last week whether they really
did have a definitive answer to my original question, other than to say that MCW is not the result of keying audio into an SSB rig.
MCW involves a modulation of a carrier (AM or FM) and the receiving station need not have a bfo to hear the morse.
We know MCW is clearly not legal on the HF bands, but is used for 2 meter repeater ID's in morse.

So, it all boils down to a simple question:
if there is more than one way to generate a CW signal on hf bands, are they all "legal" even though the method varies?
That's my question. And I still don't know the answer to that question.

I am going to forward to you my letter to Peter Martinez, as well as his reply.
I'm not sure if Steve or Larry sent Peter's reply on to you.
Peter is certainly one of the most knowledgeable operators on the digital modes and I found his answer
a very thoughtful one, but perhaps does not reflect current American FCC regulations about CW signal generation.
As Peter says, there is no "J1A" mode recognized (key a carrier and then remove it)
yet sending CW by keying a sound wave entering the mic jack of an SSB radio is a practical way of making a CW signal that is for all practical purposes, an A1 signal, although it may be called J2A.
I'm assuming the carrier and unwanted sideband are removed, and the audio tone has little distortion, and the
rig is not driven into the ALC region, just the same as operating psk or afsk.

The issue really depends on the question of whether it matters HOW a CW RF signal is generated.
Keying a rig's carrier on/off or keying an audio line going into an SSB transmitter produces (we think)
identical RF signals, assuming the carrier and unwanted sideband are

eliminated before reaching your coax.
But the legality in terms of FCC rules may not reflect this change in technology.

Do you have a name of someone in the FCC whom I could contact about this issue?

Again, thank you.

G3PLX Peter Martinez
DXSOFT listserv
ARRL folks: Steve Ford, Chuck Skolout, Larry Wolfgang

Dear Peter Martinez:
Thank you for such a thoughtful answer to my query about whether or not it is legal to send
CW by injecting a keyed audio signal into the mic jack of a clean SSB transmitter on the HF bands.

The reason I was writing to you, and to the dxsoft listserv, was that when I asked Steve Ford and others
at ARRL Headquarters, the answer was not clear to them either.

The debate then centered around the question of whether sending an audio tone into an SSB transmitter
was a form of "modulated CW" (MCW) which is not legal on the HF bands.
MCW is what repeaters do on FM to identify, and what aircraft do on the 120 MHz AM band, but in both
of these cases, the carrier is not eliminated, and the receiver does not need a bfo to demodulate (hear the morse sounds).

So when you inject a keyed (single) audio tone into the mic jack of an SSB transmitter (LSB or USB) I could not visualize
this as a form of MCW since the transmitter has removed the carrier as well

as the other unwanted sideband.
The "designators" have always bothered me, as you very well define.
Is it HOW the RF is generated which is important or HOW it is detected that counts?
Or maybe, it should just be how much RF spectrum the mode requires.

What we are doing in an SSB rig is to transfer a keyed audio wave (say 1 kHz) into a keyed RF signal, say 7 MHz
in a kind of AF to RF mixer.
A steady unkeyed 1 kHz audio tone produces a steady unkeyed 7 MHz RF signal (no sidebands, no modulation).
If we key the audio, it appears as a keyed RF signal, just as if we toggle the RF by a key in CW mode.
As you say, a receiver could not tell HOW the RF CW signal was generated by the transmitter.
The bandwidth of audio injected CW signal is still determined by the audio rise/decay time and the keying speed, just as in "real" CW.
Maybe this "mode" should be called audio-keyed CW (ACW) to match audio frequency shift keying (AFSK) to send RTTY.

Assuming the harmonics (any distortion) in the sound wave are low and all of the amplifer and mixer stages in the transmitter are "linear" then
there would just be a keyed RF signal on the HF band of choice.
If we did not remove the "unwanted" sideband (either LSB or USB) then we'd have TWO keyed RF signals (double sideband)
separated by TWICE the audio tone frequency (carrier is still removed).
That would also be possible, although a waste of spectrum.
Is this then "double sideband CW"? That would have an interesting designator!

In terms of engineering, operating CW using the SSB mode of a radio would be simple, but all of the amplifier stages
would have to operate in class A or AB to keep distortion to a minimum.
The old AM rigs with plate modulation always operated CW in class C to keep efficiency high in the RF finals.
So producing CW by injecting a keyed audio tone into the mic jack of an SSB radio would not be the most efficient way to generate CW signals.

With the advent of CW software and clean sound cards, I suspect many of us are actually operating CW by this technique
and are just not bothered by the question of its legality.

I would like to do an experiment with a spectrum analyzer and look at the keyed RF by the two methods
and compare their bandwidths. Perhaps even on-the-air tests might be useful.
I am offering to do this with anyone who might like to conduct such an experiment.

I am going to forward your letter, and my letter to you, to the dxsoft listserv and to the ARRL Headquarters
and QST folks. Perhaps Steve Ford or Larry Wolfgang at ARRL might be interested in a one or two page article to discuss

this issue.

Again, what surprises me the most is that this "issue" has not come up before in QST.
Steve does not mention sending CW with a sound card in the new Digital Handbook (ARRL).

From Peter Martinez

Barry:

It's an interesting question, but it's more of a legal one, or even a semantic one, than a technical question. I can perhaps help to throw some light on the technical aspects - since that's where my experience lies - but I would have to leave the semantic and legal discussions to others.

First of all, let's tackle the technical equivalence of (a) an RF carrier which is switched on and off, and (b) an audio tone which is switched on and off and fed into an SSB transmitter.

For all practical purposes the two are the same. You could quite easily set up an experiment in which you have a number of CW transmitters set up to radiate CW signals which are to be examined by a panel of experts with suitable test equipment, alongside a number of SSB transmitters set up to do the same by means of audio tones, and at the end of the test you could find that the experts cannot tell them apart. Clearly if the SSB transmitters were 'unclean' in that some had low levels of unsuppressed carrier, or detectable unwanted sideband, or the audio tones (at 1000Hz for example) had detectable 2nd harmonic, then some of these clever experts might spot the SSB rigs this way, but given SSB transmitters that meet a reasonable performance specification, there really is no difference between the signals AS RADIATED from the keyed-RF or from the keyed-audio methods.

The same applies where the keying is FSK or PSK rather than on-off, as you pointed out. RTTY has long been generated this way as an alternative to frequency-shift keying an RF oscillator, and PSK31, to my knowledge, has never been generated any other way.

Your question 'Is it legal' then comes to mind. Or rather, the question should be asked: "Why do we even need to think about whether it's legal or not if we know there's no difference on the air?".

I think we have to go back to see how the ITU regulations evolved, and in particular how the method of classifying radio emissions evolved. We all

know that CW is designated A1, MCW (a tone modulating a carrier) is A2, AM voice is A3, FSK is F1, and so on. When SSB came on the scene, although initially it was classified as a subset of AM, this was later changed and the letter J was used, so SSB voice became J3. There's no such thing as J1 because you can't key a suppressed carrier, but what might J2 be? As I said above, a tone fed into an SSB transmitter is no different on the air from a carrier, so a J2 emission is technically the same as an unmodulated carrier. So what designation should you give to a tone fed into an SSB transmitter?

It's the ambiguous answer to this last question which has caused all the trouble. If I feed an audio tone from my soundcard output into my SSB transmitter mike, am I transmitting J2, or am I transmitting an unmodulated carrier? If I frequency-shift key this audio tone with RTTY, am I transmitting J2B or F1B? If I on-off key that tone with morse-code, am I transmitting J2A or A1A? A question I am often asked is whether PSK31 should be logged as J2B or G1B.

If I take my semantic hat off and put my technical hat back on, I think the answer should be that, since there's no difference, ON THE AIR, between the two different ways of generating these modes, and the emission designators are intended to classify emissions ON THE AIR, rather than as a way of classifying transmitters, then the use of the "J2" designator is flawed. We shouldn't use it. J2 is nonsense. We should stick with the 'raw' designation of the emission as it appears on the air.

If we go that route, then the answer to "Is it legal" becomes very clear. It is. If the signal you transmit appears ON THE AIR to be a carrier which is keyed on-off, and the law say you are permitted to key a carrier on-off, then you are transmitting legally, even if you are actually using some other way of generating the signal itself. And the same applies to other modulation methods. Where an SSB transmitter is used simply as a means of up-converting an audio spectrum to RF, the emission should be classified as being that of the original audio signal rather than being classified as SSB. The original emission designator, be it A1, F7, G9, or whatever, should not be replaced by "J2".

Whether or not the legal people would accept this, I don't know, but my point is that the whole reason we are discussing the question at all, stems from this flaw in the ITU mode designation scheme. The only ways to sort this out would be (a) to refer the matter to ITU, or, if we can't wait that long, (b) define the modes we are permitted to use by means of terms which do not use the flawed semantics.

Forward this email to who-ever you wish, but if you do, please back-copy to peter.martinez@... so I have some idea of where it went, and include this sentence in any forwarded copy.

Peter G3PLX

Dear Peter Martinez:

My name is Barry, k3eui, and I have a question that you might be able to answer since you
are so familiar with the digital modes of communication on the ham bands.

My question concerns the methods of generating CW on the HF bands.

Typically, or conventionally, a CW signal is sent by keying a carrier on/off with a key, keyer, or keyboard.
The rig is in CW "mode" and the frequency read on the dial is the frequency of the carrier.
The bandwidth of such a signal is determined by the keying waveform shape, the keying speed,
and the electronics of the keying circuit. Typical bandwidths are a few hundred Hz for high speed CW.
A lousy keying circuit produces "clicks" which take up even more bandwidth.

But there is another method that one can send a CW signal nowadays using a computer and sound card.
What if we use a computer sound card to generate a single pure sine wave, say 1000 Hz (low distortion)
and feed this audio signal into the mic jack of an SSB radio in either USB or LSB.
Let's assume that the carrier is suppressed as well as the "unwanted" sideband.
If you were to key the audio line from the soundcard, using software such as CW Type, or Hamscope, you can
produce a CW-like signal from your radio. That is, the audio just moves the RF carrier frequency up or down the band by 1 kHz
depending on whether you are in LSB or USB mode.

We know you can send CW this way, but my question "is it legal"?

This question was posed to some of the folks at ARRL Headquarters, and the answer was not obvious to them.
We've exchanged a few letters back and forth, and then I put this question on the dxsoft listserv on Yahoo
and got a variety of answers.

We know this is NOT sending "MCW" since we are removing the carrier and unwanted sideband in the SSB rig.
FM repeaters Identify by sending an MCW Morse over the repeater.
And AM aircraft send Morse by sending an audio tone over an AM transmisstion.
Both of these MCW modes are clearly not legal on the HF bands.
But what about "modulating an SSB signal with a pure single frequency sine wave"?
Is this a legal method of generating a CW signal?

Let's compare this to RTTY.
You can generate an FSK RTTY signal by shifting the oscillator (vfo) of your transmitter by 170 Hz on your data line.

The mode switch of the rig is set to FSK, or RTTY, or DATA, or whatever the manufacturer calls it.
Some, but not all radios allow you to send FSK RTTY by this method.
This produces either one of two RF signals (mark and space) at a given Baud.

At the receiving end, the RTTY signal can be demodulated as long as it has a bfo.
The audio from your receiver can be sent to your computer card, and the software (MMTTY) prints the letters on your screen.

You can also send RTTY (legally) by sending two audio tones of 170 Hz shift into the mic jack of an SSB radio using either USB or LSB.
We call this AFSK since the radio's mark/space is generated with the rig in SSB mode by two AUDIO tones... hence audio frequency shift keying.
We are assuming the unwanted sideband and the carrier are eliminated.
This also produces a mark/space which for all purposes (if there is no distortion) is identical to an FSK signal at the receiver.

So can we do the same with CW?
Can we send a true (legal) CW signal by using ONE tone keyed on/off into the mic jack of an SSB radio?

I'd be interested in your views on this question.

And may I have your permission to post your answer on line and share it with the folks at ARRL Headquarters?

From: k3eui@aol.com
Topic: 3241 Message: 3241

Larry Wolfgang
ARRL Headquarters
Technical Correspondence Editor

Hi again, Larry:

Again, thanks for responding to my email about the issue of CW produced by keying an audio tone into the mic line of an SSB transmitter.

First, I'll call you today since my main concern was why this hasn't come up before in any discussion about operating CW with a sound card.
I looked for the answer in Steve's ARRL Digital Handbook, and discovered that the handbook does not mention the CW mode and sound cards.
In fact Steve mentions that CW is not considered a "digital mode" by some definitions or the word digital. But that's a different issue.

I am wondering whether my letter (edited) and Peter Martinez's response (with his permission) and maybe your response as Tech Correspondence editor, might appear as a page or two in QST?

Some history:
In the "old days" we operated CW by plugging a key or keyer into the "key jack" on our transmitter and simply interrupted a radio signal that eventually worked its way to the final amplifier and antenna. We could key a crystal oscillator, a VFO, a buffer stage, the cathodes of the final RF amplifier. The result: an on/off RF "continuous wave", hence the name CW. I guess we could even key the RF coax line, althought this would not be wise.

This RF wave had three states: off (no rf), on for a short time (dit) or on for a longer time (dah). The key might interrupt any part of the RF circuit to produce these signals. My first radio, a homemade two-tube job, keyed the cathode of a crystal oscillator (6au6) which then went to a 6146 final amp. I could get perhaps 50 watts on CW on 40 meters. The note was awful.... as my voltage regulation was very poor. Of course, I didnt' know much in those days... I was 13 years old. But it worked and I made many enjoyable CW contacts with two crystals on 40 meters.

My next rig was Heathkit DX100. I was in heaven. It had a vfo, AM and CW modes, and was a dream come true.
The keying waveform was much better than my homebrew rig. I learned what keying the bias line meant and had to watch out
for high voltages on the key line.

Now... to bring us up to the modern era.
You can still send CW by inserting a key or electronic keyer into the key jack of a radio in CW mode.
It works the same, other than maybe having some buffer stages to keep the RF

signal frequency more constant than in the old days.
The old R S T signal reporting system almost makes no sense these days,
since virtually everyone is a T 9 signal... almost everyone.
When was the last time you heard hum or key clicks on CW?

OK... now with the advent of CW computer copy programs and CW sending
programs, things get a bit more complex.
I can use my software (say CW Type, or Hamscope) to do the keying for me
if I have everything hooked up correctly
in my interface (I use a Rigblaster). One of the serial port lines (DTR,
RTS) can toggle the keying and for all practical purposes, the rig doesn't know
the difference. My rig is still in CW mode. I can "send" CW by typing on
my keyboard, and can send perfect code at virtually any reasonable speed.
The result is still a keyed RF wave: we call this A1 or A1A.
The FCC doesn't care whether I key the rig with a key, a keyer, or my
computer keyboard and software.

Now here is where it gets a little dicey.
If I feed a constant audio wave (ay 1 kHz) into the mic jack of my SSB rig
it will produce a constant RF wave equal to carrier frequence +/- audio
frequency, depending on whether my rig is set for USB or LSB. So again, I
have a simulated "carrier".
I am simply upconverting my audio wave (say 1 kHz) into an RF wave (say 7
.100 Mhz). No modulation involved.
The bandwidth should be the same as my old carrier with rig in CW mode and
key down.
So I have simulated a carrier, although my rig actually removed the
"original" carrier in the balanced modulator.
My "unwanted" sideband was removed because it didn't get through a filter.
So do I have an SSB signal now?
No... I don't think so.
I just have a continuous RF wave (no amplitude or frequency variation).

I can now key this audio tone going into the mic line or phone patch line of
my rig to produce CW type of signal.

Two questions:
1. What is this type of keying called? (A1A, J2A, etc.)
2. Is it legal to generate CW by this method?

So this ultimately involves looking at the FCC rules.

You, Steve, Chuck, Dan Henderson, and some (but not all) on the DXSOFT
listserv have all told me that "yes" it is legal, as long as the carrier is
suppressed and the unwanted sideband is suppressed (say >40 dB). But the answer
was not obvious to any of us at first, especially not to me.

Peter Martinez's letter to me was very helpful, and he is the expert on
explaining the ins/outs of digital modes.

I am wondering if QST might want to publish something on this.

It is definitely NOT obvious to some (most) of us that sending CW by keying an audio line into an SSB rig is legal.
It might help us all to hear it said so in a QST article.
Steve Ford suggested contacting you as Editor of Tech Correspondence column.

Getting back to FSK vs. AFSK RTTY ..... I still do not agree with you.
There are basically two methods of sending a RTTY signal.
The methods are different but the results are nearly identical.

One way involves using a radio that has an FSK mode built into the radio.
In such a radio, there is a jack called FSK.
When you close the connections on that line, the VFO frequency shifts by 170 Hz.
Often there is an internal adjustment on the radio to set the difference to 170 Hz (standard shift).
My Yaesu FT 902 has such a jack and such an adjustment pot.
You can switch the VFO frequency by 170 Hz no matter what band you are operating, by closing the FSK line on the radio.
Hence, the "mark and space" signals that differ by 170 Hz.
My PK232 worked with my Yaesu FT 902 to send RTTY by this method.
The PK232 closes the FSK line on the rig, controlled by the communications software.
So this is true FSK mode.
I enjoyed this for years, although the high pitch sounds were annoying (2125, 2295 Hz).

What if your radio has no FSK mode switch?
You can still send RTTY signals if you have a sound card and the right software.
I now load up MMTTY program, and feed the audio out line of my computer sound card into the mic or phone patch input of my radio.
Often this audio signal is buffered or filtered or ground-isolated to keep out RF (feedback can be a big problem).
The software allows me to choose any center frequency on the spectrum display, and send TWO alternating audio signals,
one at a time, to the rig. The rig is in SSB mode (either USB or LSB).
The resulting RF sent down the caox as you mention, is a single RF wave in either one of two states,
shifted by 170 Hz, again, the "mark and space".
If I get the tones "reversed" my signal is "upside down" and I don't get any useful print.
The software MMTTY has a REV toggle switch, or I can just switch from LSB to USB to get it right.
But I like this AFSK method better than FSK since I can set the actual audio tones in my software to something like 1000 and 1170 Hz,
a lower pitch more comfortable for my ears. Of course, the sound card and softrware do all of the hard work.

I believe this second method of generating a RTTY signal is what most of us call AFSK.
Audio frequency shift keying produces the identical results to FSK,
frequency shift keying.

At the receiving end, there is no difference, assuming the carrier is suppressed and the unwanted sideband is suppressed in my radio.

So AFSK is possible, and legal, as a method of communicating by RTTY on the HF bands with an SSB radio.
All you need is a sound card, proper software like Hamscope or MMTTY, and an SSB radio.
Most of us are sending RTTY (20 meters) by this technique... using a sound card.
When I ask the operators I am in QSO with on 20 meters, hardly anyone is using true FSK keying.

The results on the air are the same... but the method of creating the mark/space differ in FSK and AFSK.
If I am wrong about this, then I apologize.
Both methods are legal according to FCC rules (I hope).

My reason for mentioning FSK vs AFSK is that the same argument can be applied to sending
CW by two methods: keying the RF carrier wave in some stage to produce CW vs. keying the audio line in an SSB rig.
Here again, the results are the same. Same bandwidth by either method.
Peter Martinez's letter was very clear that the designator for this mode might be called J2A (although he didn't like that).

Does the FCC prohibit sending CW by this technique: J2A ?
I guess the answer is NO. Or maybe it is just not mentioned since it is a rather "new" technique.
But we'd better watch out that the carrier and unwanted sideband are really suppressed... just like in RTTY or psk.

In some respects, this is simple and maybe need not be addressed. In other respects, this is complex because of our understanding of what happens when an audio tone (constant or keyed) is injected into a SSB radio, and then the carrier and unwanted sideband are removed.
Many hams told me that NO... sending CW by keying the audio line was "MCW" and was NOT legal on HF bands.
I didn't think so, because my rig removed the carrier (and unwanted sideband).
I am not "modulating" a carrier in the same way that a two meter FM repeater ID's in morse.
So interrupting an audio line into a properly working SSB is definietly NOT a form of MCW.
Many hams (including myself) probably didn't know that.

Then I went back and read various ARRL Handbooks (I have handbooks from the '60's up to 2002).
I discovered that keying a carrier when the rig is in CW mode should be classified as a type of AM "modulation"
since keying the carrier on/off results in two "sidebands" (upper and lower). Of course, then I realized that the bandwidth of a keyed signal depends on the keying speed and the "shape" of the keyed RF signal.

I believe in QST articles the authors mention a 5 millisecond rise time as ideal shape: not too hard and not too soft.
My old homemade rig from the 60's had terrible keying... back then we called it "key clicks".
Now I know what that means... harmonics getting in, creating a wider bandwidth than necessary for good CW communications.

Since this topic got bigger and bigger for me, and I copied most of the emails to both you, Steve, and Chuck, I am wondering
now if you think there is any need to share this information with the wider ham community?

I'd be most willing to write up a better, more edited, "letter to the editor" and have Peter Martinez and you respond.

Interesting sidelight... I called West Mountain Radio and talked with one of the guys there about the legality
of sending CW by interrupting an audio tone from my sound card. They did not want to comment one way or the other.
So it may not have been obvious to the person on the telephone that this IS a legal method of sending CW and they had
no reason to not just say out flatly "yes... go for it".

What do you think about all of this?
Might QST publish something on this topic?

3242. SeaTTY 1.71 is released

Yahoo group: dxsoft
Date: 2006-07-13 07:43:41 UTC
From: Sergei Podstrigailo
Topic: 3242 Message: 3242

Hello All,

I just have uploaded SeaTTY 1.71 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Some problems with text displaying/scrolling were fixed.

--
Best regards,
Sergei

3243. made CW work

Topic: 3243 Message: 3243

Petrer Martinez G3PLX
W3RM Dick Moll
Steve Ford, Chuck Skolaut, Larry Wolfgang - ARRL Headquarters
DXSOFT listserv on Yahoo

Hi folks:

I finally got my Yaesu FT-902 to work on CW mode with my Rigblaster Plus
by getting the serial port lines set up correctly for keying and PTT.
Now I can send "true" CW with my keyboard and software.

I used the software CW Type to set the CW keying line to the DTR
serial port pin and the PTT line (XMIT) to RTS serial port pin.
I ran a stereo cable between the key line out on the Rigblaster and the key
input on my rig.
My rig has an electronic keyer (using a three conductor cable) built into the
radio which I had to disable.
Finally ... I got it to work properly.

I got numerous contacts on CW on 20 meters and I asked the op on the other
end to carefully listen
to my CW note as I switched my rig back/forth between CW and USB modes.

When I switched to USB mode, and the software keyed the audio line (set up
for 800 Hz sound card output) going into my mic jack.
I was careful to NOT overdrive the audio into the mic jack, and stayed out of
the ALC range.
I set the audio signal from the sound card to a 10 millisecond rise time
(can be adjusted in the software CW Type).
The note sounded good to me on my monitor speakers.
I made numerous contacts at about 15 - 25 words per minute.

No one was able to detect any difference at all on the air between my radio
set on CW or on USB.

If anyone wants a sched with me, please write directly to k3eui@...
I live in the Philly area and can get on 80, 40, or 20 meters.

You might want to see if you can hear (see) the difference between keying the
RF carrier (A1A)
or keying the sound going into the mic line (J2A).
I'm satisfied that there is NO DIFFERENCE at all.
Oh... my actual microphone is disconnected when I send CW thru the mic jack.

As a number of you have said... there is no difference in RF output
(as long as the carrier is eliminated and the unwanted sideband is down).

I'll now contact the FCC to see what they say about the legality of sending CW by keying the audio signal
going into the microphone jack of an SSB radio.

73,

Barry k3eui

3244. CW is legal in SSB mode

Yahoo group: dxsoft

From: k3eui@aol.com
Topic: 3244 Message: 3244

Larry Wolfgang
ARRL Headquarters
Tech Correspondence Editor

Hi Larry and all:

I must admit that I've learned a lot in the past few weeks about how transmitters work in SSB mode,
about the definition of MCW and AFSK, about the bandwidth of a CW signal, about digital modes in general
from Steve's ARRL Digital Handbook.

One of the things that impresses me about Ham Radio is that if you don't know the answer to a question,
there are many folks out there somewhere who will try to answer you.
So before I say any more, thank you to all who answered my query about CW generation.

My "old" method of getting on the HF Digital Modes was to use a PK-232 TNC interface and simple PC computer.
The PK232 could "key" my rig in CW mode by closing the Keyline,
controlled by the TNC software.
I was impressed with that, because I could type faster than I could send CW accurately with a key or keyer.
I enjoyed doing that for years. Copying CW in my head was pretty easy, so I didn't rely much on the CW copy programs.
I just used my computer keyboard and TNC to send the CW.

Then I hooked up my TNC to the FSK jack on my FT902 and had a blast operating FSK RTTY for years.
I had wonderful QSO's on 20 meters RTTY with that setup.
My radio's VFO was changing the frequency by 170 Hz when I closed the FSK line on the rig.
So my carrier was shifting in frequency.
The PK 232 and software did all of the hard work.

Then the wonderful world of PACTOR and AMTOR began in the 90's and I learned how to operate those modes using my PK232
and computer.

When the sound cards on PC's got better, I wanted to learn how to use the PC's sound card to operate the digital modes
like RTTY, PSK31, SSTV, and of course, CW.
For these modes to work with my sound card and simple interface, I was operating in the USB or LSB mode on my rig.
Audio tones from my sound card were "modulating" my SSB signal.
I managed to hook everything up properly, and used Digipan, Win PSKse,

Hamscope, MMTTY, and MMSSTV software
to get on RTTY, PSK31, and SSTV on twenty meters. I had a ball and wanted
to know more about HOW these modes worked, so I bought a copy
of Steve's HF Digital Handbook to learn more. I really like that ARRL book.
It is well written, easy to follow, but the problem is that
it does not even mention operating CW by using a sound card. Is CW
considered a "digital mode"?

So.... I searched the literature as best I could to try to discover if it was
"legal" to send CW (on 20 meters) by using my
software (say CW Type) to key the audio line from my sound card to my mic
input on the rig in SSB mode (not CW mode).
I had not been able at that time to successfully hook up the KEY line from
the rigblanster to operate my radio in CW mode.

I set the audio frequency of the sound card in the software CW Type to
800 Hz, operated on USB,
and sent the audio through my Rigblaster interface.
But it bothered me that I was sending CW with my rig in SSB mode (either
USB or LSB worked the same).
Why was I bothered? Well... was I sending out an SSB signal?

I wrote to a number of ham friends of mine and asked it they thought it was
"legal" to send CW by keying the
audio line (sine wave) of an SSB transmitter. Wow.... did that ever
generate a lot of heated discussion.

I then contacted West Mountain Radio and asked them if it was legal to send
CW by keying the audio line in SSB mode.
I knew it worked, but I didn't know if I was legal doing it this way.... what
we have now called J2A.
The West Mountain Radio guy would not answer me either way... hedging his bet.
If he knew it was legal, then why not just say "YES"?

Then I wrote to Steve Ford (we did not know each other personally) as editor
of QST and editor of the Digital Handbook.
Steve said he would check with the "lab guys" at ARRL.
So perhaps even Steve was not 100% sure a few weeks ago that sending CW by
keying an audio line going into the mic jack
of an SSB radio was legal. Steve contacted Chuck Slolaut, and then Ron
Henderson, and finally you at ARRL Headquarters.
I think I opened a "can of worms".

I believe that there is enough confusion about this topic to warrant an
article in QST.

In such an article I would begin by explaining the classic definition of CW,
and how a CW signal is typically generated,
and its designaor A1A. I'd also mention that CW is really a form of
"double sideband modulation" in that when you close/open
a key line in an RF circuit, you generate many frequencies (harmonics) and
that these various frequencies create a given bandwidth of your CW signal.

CW signals are not of an infinitely thin slice of RF spectrum, since if they were, they'd contain no energy at all.
Typical CW signals are a few hundred hertz wide even from a well designed transmitter.
The bandwidth of a CW signal is related to the keying "waveshape" of the RF envelope and the keying "speed" in wpm.
This is in the latest handbook, but I think many of us don't really understand how or why an on/off RF signal has a bandwidth.
I did remember that my first (homemade) CW tube rig had bad "key clicks" (high frequency harmonics).

OK... so that is CW, although it is NOT a "continuous wave" since it is keyed on/off.
So maybe call it keyed-continuous-wave (KCW) or on/off continuous wave (OOCW).
This is the traditional A1A designator for CW operation. That's how we all made a CW signal.
The receiving end needs to translate this on/off RF signal back into an audio tone so that the listener can hear the Morse dit-dahs.
Such is the function of the BFO (mixer) and detector (get the audio) and speaker in the receiver.
You can't "hear" the audio tones of a CW signal on HF bands with your receiver in the AM position.
Well... it just goes "thump, thump, thump" and is not pleasant to copy.

Can this same type of CW signal be generated in your transmitter if your computer sound card sends keyed audio frequecies into the microphone or aux audio input jack (phone patch jack) of your SSB transmitter?
Now.. here is where it all hits the fan so to speak.

Many... perhaps most of the hams I contacted said NO... this is not legal since it is sending MCW, not CW.
Well, my definition of MCW (modulated CW) is that the receiver does not need a BFO to hear the note, but others did not agree.
I thought MCW was when I attached a tone oscillator to my mic line and transmitted code practice on 2 meters AM or FM (with a carrier)
the way I did when I was a kid and we did code practice sessions on two meters with Gonset 2 meter AM rigs (1960's).
Also, MCW is what repeaters do to identify in Morse on FM, and airplanes send on the AM aircaft 125 MHz band.
In both of these cases, there is a carrier and the audio tone modulates the carrier (AM or FM).
You don't need a bfo in your two meter rig to hear the morse ID's on repeaters.
If you do NEED a bfo in your receiver, then you are not sending MCW.
So.. MCW is not what I am sending when I key the audio line to my SSB rig on the HF bands.

So what does happen in an SSB rig when you feed a continuous audio sine wave of high purity into the mic jack
and do not drive the ALC circuit of your rig?

Is this "modulation"? (good question.... so what is modulation?)
A single pure sine wave of audio fed into an SSB transmitter results in a single RF frequency on whatever band your radio is set to.
There is no modulation even though you are using the mic line.
There is no modulation because there is no CHANGE in the amplitude, frequency, or phase of the RF signal.
There is no information being sent.
This is just like a carrier (constant RF wave) sent by my rig in CW mode with the key down.

What comes out of the radio is a single RF wave that for all purposes, is a "carrier" although the original carrier
in my SSB radio was removed in some stage by its balanced modulator circuit.
So what is the designator of this type of signal? J1?
The rig is in SSB mode, but the signal is definitely not an SSB signal. There are no sidebands.
It is a continuous RF wave with no modulation. Can we call this a "new carrier"?
My radio is acting just like an "up-converter" switching my (constant) audio frequency to a (constant) radio frequency.
There is no modulation!

OK... that took about a week for me to understand, and my background is in physics.
But to be honest, I really didn't understand this until about a week ago.

Now... what happens when you KEY this audio wave going into the mic jack of your SSB rig?
Well, the output of the radio is now a keyed RF wave of whatever band you are set for.
The frequency of the RF wave is a combination of my dial frequency (removed carrier in SSB mode) plus or minus the
audio frequency (depending on whether my rig is set for USB or LSB).
If I am in USB, just add the two frequencies.
If I am in LSB mode, then subtract the audio frequency from the (removed) carrier frequency.
A frequency meter on the output side of my RF shows me this is true.

The only difference in SSB between keying a single pitch audio sine wave and actually using a microphone is that my voice
consists of a band of frequencies (200 - 2500 Hz) and all of these frequencies of various amplitudes get converted
to an RF SSB signal. This IS modulation.... there is information in the sidebands.
This is AM.... just without the carrier and one of the sidbands.

My computer software (like CW Type) allows me to type on my keyboard, and the sound card
creates the sound (of whatever audio frequency I select) that enters my rig via the mic jack.
What is this called? I guess you'd want to call it a modulated SSB signal

but that isn't true.
There is no classical modulation if I am only keying/unkeying a single pure sine audio wave.
There is just RF or no RF at some frequency. It behaves like an A1A signal.

All along, I am assuming that my SSB rig is clean, has no essential carrier, and has the unwanted sideband
removed... say >40 dB and has low harmonics. So my RF signal is clean.

This RF on/off signal is for all practical purposes idential in all respects to a keyed RF signal generated by my rig
when it is in CW mode. Wow... why was that so hard to understand?

So... I don't think many hams actually know or understand this.
MCW is not produced by a keyed audio tone entering an SSB radio.

And J2A is for all practical purposes, identical to A1A as far as a spectrum analyzer is concerned.

So my original question was "so is this legal"?
Since cound cards and computer software to send CW is rather new, perhaps the FCC or ITU has not addressed this question.

Your response was a quick "YES" this is all legal, since the FCC regulations did not specifically say that this was not permissible.
But I don't understand legal talk..... does that mean it IS permitted, if you don't say that it is not permitted?
I (we) need clarity!

When I posted this question on the DXSOFT listserv, it generated a pile of responses, so even the folks who operate digital
modes, and would probably know the most about this topic... even these folks were not sure.

A few days ago I finally got my computer/software/Rigblaster pro interface to all work properly.
Now I can send CW by my computer with the rig in CW mode and have the Rigblaster, through the serial port (RTS)
connection to my computer, key the CW keying line of my rig. I'm happy!
My error was not using a three conductor stereo cable between my CW KEY line and the Rigblaster.
My rig (FT902) has a built in electronic keying circuit, and the key jack is a three conductor line.
When I send CW through my Rigblaster, I have to disconnect the built in keying circuit.

So now I have TWO means to send CW using my computer and Yaesu FT 902 rig.
I've gotten many CW contacts on 20 meters and have asked the other ops to listen as I switched the method of sending CW:
from keying the CW jack (rig in CW mode) to keying the Audio coming from my sound card (rig in USB mode).
Result - no one could detect any difference.

So... some of you at ARRL and on the DXSOFT listserv were right from the start.
Keying an audio line going into a properly working SSB radio mimics true CW... in fact it is true CW.
It's just that my radio switch is in the SSB mode while I am making CW contacts.

Is all of this worth a QST article?

Larry was right from the start.
This isn't a technical issue (we know it works).
It is a legal issue - hence we must ready carefully the FCC and ITU Rules.
I tried, but still did not understand their language.

Thanks to all who responded so thoughfully,

Barry

3245. [dxsoft] CW is legal in SSB mode - Energy and Bandwidth

Yahoo group: dxsoft
Date: 2006-07-14 16:30:21 UTC
From: J. Alan Lowe
Topic: 3244 Message: 3245

Barry,

You say in your email that

"CW signals are not of an infinitely thin slice of RF spectrum, since
if they
were, they'd contain no energy at all."

Whilst I agree that CW signals in practice are not entirely a single
frequency, I would have expected that the energy, per unit time, of a
pure single frequency carrier to be simply the output power, say, in
Watts. If the energy of a practical CW signal arose only from its
sidebands, the energy of a dah would be the same as that of a dit!

In other words, the energy of the signal is a function of bandwidth only
to the extent that the total energy is the sum of the contributions of
energy of the various frequencies within that bandwidth.

73, Alan, G3XZX

3246. bandwidth of a carrier

Yahoo group: dxsoft
Date: 2006-07-15 12:54:26 UTC
From: k3eui@aol.com
Topic: 3246 Message: 3246

Hello Alan G3XZX:

I meant to say that I am now convinced (but it took some time) that a keyed audio wave fed from my sound card into a properly working SSB radio (on either USB or LSB) through the mic jack should produce a keyed RF wave with the same "bandwidth" as a carrier that is keyed with the radio in CW mode.
If we all agree on that, then this is the end of the discussion.

The method of generating the on/off RF wave is different in the two cases: your radio is in SSB mode vs. CW mode switch.
One method is called A1A (rig is in CW mode) and the other method is called
J2A (suppressed carrier, one sideband removed, one sideband keyed).

But what goes into your coax is the same.... identical RF signal.
At the receiving end, both appear to be identical in all respects.
This is the same argument for AFSK vs. FSK RTTY signals.
Both appear to be legal.... that took awhile for me to understand.
Some knew it was legal from the start and some of you answered me right away.
Some still believe that this is not permitted.
Some still want to call this MCW which is only permitted on the VHF and UHF bands.

Which got me to think "what is the bandwidth of an unkeyed carrier wave" (we used to call it a "dead carrier")?
Even an unmodulated unkeyed carrier must be a band of frequencies.
That is, it can't be infinitely thin, since if it were, there would be no energy.
I imagine lots of things determine the bandwidth of a "dead" (unmodulated) carrier including power supply hum,
thermal variations in the vfo, voltage drops, doppler effect in propogation of a skip signal, etc.

This looks a lot like the way we teach optics.
We talk about light "rays" which are infinitely thin passing through very thin lenses.
Obvioulsy this is just a model... a way of thinking about how real light passes through a lens or mirror.
There is no such thing as an infinitely thin light "ray".
So there is no such thing as an infinitely thin RF wave (carrier) of a single frequency.
That's all I meant to say.

There were lots of comments sent to me (not all to the DXSOFT listserv) about the issue of CW vs MCW.
CW is what happens when you key the key jack with your rig in CW mode. We

all understand that.

MCW is what happens when an audio wave modulates a radio wave.
So the audio that goes from a sound card into your mic jack (rig in SSB mode) modulates a radio wave in some mixer circuit.
So at this point, it is MCW inside your transmitter.
But then the transmitter removes the carrier (balanced modulator) and then removes the unwanted sideband (filter)
so what comes out of the radio and enters your coax is NOT MCW but rather just CW.
It is no longer a "modulated" signal (other than turning on/off).
And this is a legal way of communicating to other hams in the CW part of the band.
Am I correct at this point????

The question that still bothers me is this:
so can I whistle Morse Code into the mic jack of my rig in SSB mode and talk to other hams in Morse in the CW part of the band?
Let's assume I could whistle a pure single-pitch constant amplitude sound wave (sine wave).
Is this mode J3A ? Is this legal way to communicate in Morse on the HF bands?

It's only a question of spectral purity of a sound wave: sound card out vs. whistling with my voice.
What comes out of the rig is still a CW signal (no steady carrier).
Is this "modulation" ?

By the way, I won't try this!

Barry

Barry,

You say in your email that

"CW signals are not of an infinitely thin slice of RF spectrum, since if they
were, they'd contain no energy at all."

Whilst I agree that CW signals in practice are not entirely a single frequency, I would have expected that the energy, per unit time, of a pure single frequency carrier to be simply the output power, say, in Watts. If the energy of a practical CW signal arose only from its sidebands, the energy of a dah would be the same as that of a dit!

In other words, the energy of the signal is a function of bandwidth only to the extent that the total energy is the sum of the contributions of energy of the various frequencies within that bandwidth.

Topic: 3246 Message: 3247

Hi Barry and group
your still too concerned about generating method... what is coming
out of the transmitter makes u legal or not... (my view)
in this case u want a clean unmodulated carrier...and if ur
whistling produces a clean unmodulated carrier... where is the
problem....
an attempt at humeor///... if u could get a clean note from
passing gas into the mic.... it would still come out as a clean
carrier... that we all know and love as cw...
The "modulation" stops at the ballanced modulator and single
carrier comes with the filtering to eliminate the other carrier.
input is audio,, output is cw...rf... a conversion has taken place
and both freq (audio) and modulation have been eliminated now we have
an rf carrier...

3248. [dxsoft] bandwidth of Morse

Yahoo group: dxsoft
Date: 2006-07-16 02:16:38 UTC
From: Brian Heywood
Topic: 3246 Message: 3248

Hi Barry and others,

The bandwidth of an unkeyed "perfect" carrier wave with no power supply
hum is zero; occupying a single unmodulated frequency.
If power supply hum is not filtered sufficiently in the transmitter
individual stages then hum appears with the carrier, producing a
spectrum of frequencies which are of zero bandwidth but spread out from
the carrier at the sum and difference frequencies.
It is modulating the "perfect" carrier by the hum and the bandwidth of
the output spectrum is twice the highest frequency component of the hum.

If on the other hand you have a "perfect" carrier wave and keyed it then
the carrier is modulated by the keying rate, a square wave with a little
shaping to reduce clicks (which generate wide spectrum products). A
general rule is that the bandwidth in hertz required is 4 times the
speed in words per minute.

This is developed from:
The standard morse speed is based on the word "PARIS" which totals 50
elements if you count the dit and intra-element spacing as 1 and the
dahs and intra-character as 3 with a 7 element space at the end of the
word. The highest rate of change occurs with the stream of dits in
letters such as I and S.
Thus a "dit" cycle at say 25 wpm is 25 x 50/2 pulses per minute; i.e.
625 pulses per minute or 10.4 pulses per second.
The components required to made the "shaped" squared wave are
significant out to the 5th harmonic of the fundamental square wave
frequency.
Thus the bandwidth required to adequately receive the transmission so
that the signal can be decoded is
twice x (5 harmonic) x 10.4 pulses per second i.e. about 100 hertz

hello I am an old time ham that loved rtty and the pix
from it , but since packet and some of the other modes
have come thru I no longer hear the old rtty tones
comming thru, so my question is this
have you or anyone else use the rtty pix on some
other mode like the new stuff at 14.070 or some other
mode i sure woul dlike to keep in touch with someone
doing the pix thing

Then there is lack of shaping of the pulse which should about 15 msec.
That is probably where extra bandwidth comes from.

>> effects in the D to A process due the coarse steps, poor filtering.

BH> Then there is lack of shaping of the pulse which should about 15 msec.
BH> That is probably where extra bandwidth comes from.

???
There are not problem to do _ideal_ shaping by sound card,
which is much better then with hardware keying.

For example, CwType does cosines shaping...

Returning original question about "legal" ...

Is legal to form CW at first IF of 8000 kHz ? Surely YES.
Is legal to form CW at second IF of 500 kHz ? Surely YES.
Is legal to form CW at third IF of 1000 Hz ? Why not? Surely YES!

Best regards,
Sergei

3254. short article on CW Type for local club

Yahoo group: dxsoft
Date: 2006-07-18 10:22:56 UTC
From: k3eui@aol.com
Topic: 3254 Message: 3254

Dear Sergio and DXSOFT listserv:

I got around to writing an article for my local ham radio club and thought I could share it with you all.
If you find any errors, please let me know. I'm writing this for a much less knowledgeable group than you folks.
Most of my local ham friends do not operate digital modes on the hf bands.

I am also trying to write up something much shorter for a letter to the editor of
Technical Correspondence column of QST, Larry Wolfgang.

Thanks to all of you for your helpful suggestions.
It should have been more obvious to me all along that sending CW by keying a sound card audio into an
SSB radio mic jack was and still is perfectly legal, as long as the audio is clean and the carrier and unwanted sideband are suppressed,
just like AFSK rtty.

Barry k3eui@...
cc Peter Martnez

CW: An Old Mode Reborn
One of the simplest means of communicating by radio is to turn your carrier RF wave on/off by a keying circuit of some type. There are three states: off (no RF), on for a short time (dit), and on for a longer time (dah). Put the dits and dahs together into a kind of alphabet (Morse) and you have a means of communicating by radio. Thus, the mode we call CW was born. CW is simple technically, takes up very limited “bandwidth” (the RF spectrum needed to communicate by this mode), and is easy to demodulate (recover the sound) at the receiver. CW is also a simple mode because the transmitter needs no audio circuitry.

My first CW rig was a simple four tube homebrew using a crystal oscillator (6AU6), a rectifier and voltage regulator, and a final RF amplifier (6146). I built this transmitter with mostly junk TV parts. It put out about 50 watts and I could work 80, 40, or 15 meters (the Novice bands back then) with a few crystals. The year was 1958, the sunspot cycle was at its peak, and I could work the world with a dipole antenna. What a wonderful introduction to the hobby for me as a new “novice” KN3EUI.

CW always fascinated me, both as a youngster and now, as an adult 47 years later. But the technology has come a long way since those simple crystal transmitters. I began to wonder how I might incorporate some of the new technology of computers and sound cards to enjoy the CW mode from a different perspective.

Enter: Sound Cards
One of the new technologies available to ham radio operators is the computer and sound card. Sounds (audio frequencies) created by the sound card can be used to “modulate” the radio wave in a SSB transmitter to create the various digital modes now known as RTTY, PSK31, SSTV, and of course, CW.

How it works: Receiving Digital Mode
All you need to receive the digital HF modes is a shielded cable to connect between your speaker jack (use a Y splitter) and the INPUT to the sound card. You may need to adjust the volume of the audio from your radio, as well as the input sensitivity of your sound card to prevent getting too much audio into your sound card. Double click the speaker icon on the bottom of your Windows screen and up comes a sound control panel. Your RECORDING panel should have a number of input choices. Select the proper input (LINE or MIC) and adjust the input sensitivity to get just enough signal into the sound card. You need no “interface” to receive and decode digital signals.

Software:
There are plenty of choices of free or shareware software these days. My preferences are the following: RTTY (MMTTY) PSK31 (Digipan, Win PSKse), Slow Scan TV (MMSSTV), and
CW (CW GET and CW Type). Some programs can do multimodes (MixW, Hamscope, Stream).
You can purchase a CD with these and more programs for $10 from West Mountain Radio at
http://www.westmountainradio.com/

Transmitting Digital Modes
To transmit the digital modes, you have to accomplish two tasks: turn your transmitter on, and feed the proper level of audio into the microphone circuit of your SSB radio. Turning your transmitter on can be accomplished by your software and involves a circuit called “push-to-talk” (PTT). Most software sends a control signal over one of the serial port lines (DTR or RTS) to key the transmitter, just like pushing the talk switch on your microphone. However, you don’t want your microphone to be “live” while operating on the digital modes with a sound card, so you need to either unplug your mic, or have the hardware do it for you by disconnecting the microphone line from the transmitter.

Interface hardware
There are devices manufactured today which take care of all the problems typically found in getting on the digital modes. I use a device called a Rigblaster Plus manufactured by West Mountain Radio, but there are others on the market. The output of my sound card (LINE out or HEADPHONE out) connects via a three-conductor stereo shielded cable to my Rigblaster. The Rigblaster conditions the wave, isolates the ground, and adjusts the volume. On most Rigblasters, you can also plug in your microphone to the Rigblaster box. When you push the PTT switch on your mic, the Rigblaster disconnects your sound card. What a nice feature. A major problem to avoid is RF feedback, getting unwanted sounds from your sound card back into your mic line and rig.

I have used this combination of sound card, Rigblaster and radio to make numerous contacts on the digital modes. RTTY is one of the oldest digital modes, and you can still find a lot of activity around 14.080 -14.090 MHz. RTTY is accomplished by alternating one of two tones called a “mark” and a “space” which differ by 170 Hz. These tones are alternated in a specific pattern, called a Baudot or Murray code, with typical speeds of 60 wpm.

PSK31 came along a few years ago as a result of the hard work of Peter Martinez (G3PLX). PSK31 has the advantage of taking up very little bandwidth (about 30 Hz) and works well under weak signal conditions. You can work PSK31 on twenty meters (14.070-14.073) and work the world with 10 watts and a simple dipole or vertical antenna.

CW using a sound card and keyboard
Then I wondered about operating on CW mode with my new digital setup. One of the Rigblasters, the PLUS model, allows you to key the transmitter while operating in CW mode just like keying your rig with a straight key or electronic keyer. One of the serial lines (RTS or DTR) is typically “keyed” by the software, and a shielded cable connecting the CW out jack of the Rigblaster connects to the CW KEY line of the radio. Simply, the software “keys” my transmitter and I can send CW by typing on my keyboard. An advantage of typing on my keyboard is that I can type faster than I can send with a real key, I don’t get tired, I can create macros, and I can correct typing mistakes as I go, before the transmitter actually sends the CW signal. And, of course, the radio sends perfectly spaced Morse.

But I also wondered about operating CW using an entirely different technique. What if I keyed an audio tone going from my sound card into the mic jack of my transmitter while the rig was in SSB mode (not CW mode)? What kind of signal would I produce?

I set the audio frequency of the sound card in the software CW Type to 800 Hz, operated with my rig on USB, and sent the audio through my Rigblaster interface to the mic jack of my transmitter. I adjusted the audio level carefully so as to not overdrive my SSB radio into ALC action. It worked! But it bothered me that I was sending CW with my rig in SSB mode (either USB or LSB worked the same). Why was I bothered?
Well... was I sending out an SSB signal in the CW part of the 20 meter band?

Is it legal to send CW with a keyed audio tone in SSB mode?
I wrote to a number of ham friends of mine and asked it they thought it was "legal" to send CW by keying the audio line (sine wave) of an SSB transmitter. Wow.... did that ever generate a lot of heated discussion. I then contacted West Mountain Radio (makers of my Rigblaster) and asked them if it was legal to send CW by keying the audio line in SSB mode. I knew it worked, but I didn't know if I was legal doing it this way. The West Mountain Radio guy would not answer me either way... hedging his bet.

Then I wrote to Steve Ford, editor of QST and author of the ARRL HF Digital Handbook. Steve said he would check with the "lab guys" at ARRL on the legality of sending CW by keying the audio line of an SSB radio. Steve Ford was not 100% sure a few weeks ago that sending CW by keying an audio line going into the mic jack of an SSB radio was legal. Steve contacted ARRL employees

Chuck Skolaut (FCC Regulatory expert), and then Ron Henderson, and finally Larry Wolfgang (Technical Correspondence Editor at ARRL Headquarters). I think I opened a "can of worms" by asking this question.

What is CW?
CW is really a form of "double sideband modulation". When you close/open a key line in any RF circuit, you generate many frequencies (harmonics) and that these various frequencies "amplitude modulate the carrier" to create sidebands. CW signals are not an infinitely thin slice of RF spectrum, since if they were, they'd contain no energy at all.

Typical CW signals are a few hundred hertz wide even from a well designed transmitter.
The bandwidth of a CW signal is related to the keying "waveshape" of the RF envelope and the keying "speed" in wpm. Faster rise time and faster keying speeds result in a wider bandwidth. This is all discussed in the latest ARRL handbook, but I think many of us don't really understand how or why an on/off RF signal has any bandwidth at all. I did remember that my early CW tube rig of the 1950's had bad "key clicks" (high frequency harmonics). Now I know what that means.

OK... so that is CW, although it is NOT a "continuous wave" since it is keyed on/off.
So maybe we should call it a keyed-continuous-wave (KCW) or on/off continuous wave (OOCW). This is the traditional A1A designator for CW operation. That's how we all made a CW signal in the old days. The receiving end needs to translate this on/off RF signal into an audio tone so that the listener can hear the Morse dit-dahs. Such is the function of the BFO (beat frequency oscillator and mixer) and detector (capture the audio) and speaker in the receiver. You can't "hear" the audio tones of a CW signal with your receiver in the AM or FM position (bfo off). Well... it just goes "thump, thump, thump" and is not pleasant to copy.

Then I remembered my sound card. Can CW also be generated in your transmitter if your computer sound card sends a keyed audio frequency into the microphone jack of your SSB transmitter? Note that now your rig is in USB or LSB mode, not CW.

CW or MCW?
Many, perhaps most of the hams I contacted said "no... sending CW by keying an audio line of an SSB radio is NOT legal since it is sending MCW (modulated CW) not CW. MCW is not legal on the HF bands. What is MCW and how is it made in a radio?

Well, one definition of MCW is that the receiver does not need a BFO to hear the note.
I sent MCW when I attached a tone oscillator to my mic line and transmitted code practice on 2 meters AM or FM (along with a carrier). Also, MCW is what repeaters transmit to identify in Morse on FM, and airplanes send MCW on the AM aircaft 125 MHz band. In all of these cases, there is a carrier and the keyed audio tone modulates the carrier (AM or FM). You don't need a bfo in your two meter rig to hear the Morse ID's from repeaters. If you DO need a bfo in

your receiver to hear the Morse sounds, then your transmitter is sending CW, not MCW. So what does happen when you key the audio line going into your microphone jack with the rig in SSB mode? Let’s take a careful look at this process.

What is Modulation?
First let’s ask what happens if you feed a constant amplitude audio sine wave of high purity into the mic jack of an SSB radio and and do not overdrive the rig's ALC into action?
Is this "modulation"? (good question.... so what is modulation?)

A single pure sine wave of audio fed into an SSB transmitter results in a double sideband amplitude modulated wave in some mixer stage. But before the radio wave exits the transmitter, the carrier is removed (by a balanced modulator stage) and one of the sidebands is removed (by a filter). What exits the radio is an RF wave of constant amplitude and frequency on whatever band your radio is set to. There is no modulation even though you are using the mic line in SSB mode. There is no modulation because there is no CHANGE in the amplitude, frequency, or phase of the RF signal getting out of your radio. There is no information being sent. This is just like a “dead” carrier (constant amplitude RF wave) sent by my rig in CW mode with the key down, except for the fact that now my radio is in SSB position, not the CW position. It behaves for all practical purposes just like a "new carrier"? My transmitter is acting just like an "up-converter" switching my (constant) audio frequency to a (constant) radio frequency. There is no modulation!

Keying the audio line of an SSB radio
Now, what happens when you KEY the audio wave going into the mic jack of your SSB rig?
The output of the radio is now a keyed RF wave of constant amplitude and frequency in whatever band you are set for. The frequency of the RF wave is a combination of my dial frequency (removed carrier in SSB mode) plus or minus the audio frequency (depending on whether my rig is set for USB or LSB). Let's say that my dial reads 7.100 MHz on my radio and my audio sound card is set for 1000 Hz (1 kHz). If I am in USB, just add the two frequencies to get 7.101 Mhz to get the RF frequency going to the antenna. If I am in LSB mode, then subtract the audio frequency from the (removed) carrier frequency to get 7.099 MHz.
An RF frequency meter attached to my coax line shows me this is true.

Voice Modulation of an SSB signal
The only difference in SSB between keying a single pitch audio sine wave and actually speaking over a microphone is that my voice consists of a wide band of frequencies (200 - 2500 Hz) and all of these frequencies of various amplitudes get converted to an RF SSB signal. This IS modulation.... there is information in the sidebands (my voice).

Why operate CW in the SSB mode?
My computer software (like CW Type) allows me to type on my keyboard, and the sound card
creates the sound (of whatever audio frequency I select) that enters my rig via the mic jack.

What is this mode called? I guess you'd want to call it a modulated SSB signal but that isn't true.
There is no classical modulation if I am only keying/unkeying a single pure sine audio wave.
There is just energy or no energy at some radio frequency. The signal behaves like a classic CW signal, yet my rig is in the SSB position.

All along, I am assuming that my SSB rig is clean, the carrier and the unwanted sideband are suppressed by >40 dB and the audio tone from my sound card has low harmonics. So my RF signal is clean. This RF on/off signal is for all practical purposes identical in all respects to a keyed RF signal generated by my rig when it is in CW mode.

MCW is not produced by a keyed audio tone entering a properly working SSB radio.
So this is a legal method of generating a CW signal.
In fact, the bandwidths of the two methods ought to be similar.

So now I have TWO means to send CW using my computer and rig.
I've gotten many CW contacts on 20 meters and have asked the other ops to listen as I switched the method of sending CW: from keying the CW jack (rig in CW mode) to keying the audio coming from my sound card (rig in USB mode).
Result - no one could detect any difference.
Keying an audio line going into a properly working SSB radio mimics true CW... in fact it is true CW. It's just that my radio switch is in the SSB mode while I am making CW contacts.

CW GET is the receiving program I use. It translates well-sent Morse into letters on my screen and can copy from very slow speeds to speeds greater than 30 wpm.

CW Type is the transmitting program I use. You can set the audio frequency and level leaving your sound card with your mouse. You can also adjust the rise/decay time of your audio wave, the dot/dash spacing, and the space between letters in menu settings. It’s very versatile.

I’ve always enjoyed CW the “old fashioned way” and still copy CW in my head and send with a straight key, but now there is another way I can enjoy the mode. For beginners, CW via computer sound card can be like training wheels, allowing you to copy along in your head as well as see the characters appear on your screen.

Happy CW to everyone. Long Live CW.

Hi Barry,

I like your article. What it says to me is that 'confusion' is generated by words. In the end what is legal or illegal must be judged by what is on the air and not 'how it got there". There may yet be 'other' more exotic ways to generate cw.

I would like to see some improvements in the present software that is used for AFCW transceiving (are you listening Sergio ?). Here is the problem ..... example: If I have a wide band receiver (with a strong front end mixer) .... eg 3 or 4 khz wide. I tune the radio to a cw portion of the band and see several CW signals on the tuning indicator (eg a waterfall tuner). I can click on any one of the CW signals and see print on the screen. However unlike RTTY or PSK I do not use computer software to decode CW, I use my ears. If I turn up the audio so I can listen I will hear all the cw signals at the same time. Unlike the sound card my mind cannot separate them very easily. What I need from the software is that instead of decoding a particular cw signal on the waterfall (the one I click on) and printing it on the screen I want it to key a fixed audio tone (of my choice ... eg 700 - 800 htz). This tone can come from an external audio oscillator or from the sound card itself .... all I know is that what I want is to have a 'side tone' keyed instead of or in addition to the

print that goes to the screen).

With software like that it would be possible to develop economical wide band crystal controlled cw transceivers similar to those developed for PSK (eg the PSK-20 produced by SmallWondersLab). In fact by switching the xtal to the cw portion of the band the PSK-20 would become a CW transceiver.

3261. TrueTTY

Yahoo group: dxsoft
Date: 2006-07-25 12:55:25 UTC
From: Hans-Jürgen Karius
Topic: 3246 Message: 3261

Hallo Sergei,

I have been using TrueTTY for quite a number of years. It is a very sensitive programme and very robust even under QRM situations and has allowed me to copy a great number of NAVTEX stations on 518 and 490 kHz.

Unfortunately I do not really know when I copy a station. E.g.: I start reception in evening, open the capture file and let TrueTTY run all the night. The following morning I close the capture file and see what has been received. So I know that reception has taken place in a special night but not exactly when.

Suggestion. What do you think of adding a time stamp to the software like in SeaTTY? This would allow exact knowledge of the reception time.

Best regards

Hans, DL4YBP

3262. LPT Paddle Interface For CW Type

Yahoo group: dxsoft
Date: 2006-07-25 14:36:09 UTC
From: David Buell
Topic: 3262 Message: 3262

I recently set up my new RIGblaster Pro for use with CWType and it works very well. I want to interface my paddle through the LPT1 port. I made an interface cable according to the circuit diagram in the help file and set the software to use LPT1 as the interface port for the paddle. After sending one or two dots or dashes, both lines latch on and will unlatch only after I reboot my computer. I'm using a Dell Latitude D600 notebook computer and CWType v. 1.55. Has anyone experienced a this problem and found a solution?

EU PSK DX Contest 2006 Results

The EPC Contest Committee has received 210 logs for the European PSK DX Contest 2006 from 51 DXCC countries: 4K, 4L, 4Z, 6W, 9V, A2, BY, CN, CT3, DL, EA, ER, ES, EU, EX, G, GM, HA, HB9, HS, HZ, I, IS, JA, JY, K, LA, LU, LX, LZ, OH, OK, ON, OZ, PA, PY, S5, SM, SP, SV, TF, UA1, UA9, UN, UR, VK, VR2, YB, YL, YO and YV. Congratulations to all the winners in the 2006 European PSK DX Contest.

Alex Nazarov RA9SC leads the EU Stations ☐ Low Power category with a score of 157536. Valery Smiyan UR7QM is second with a score of 61950 and Oleg Yakushin UX0SX is in third place with a score of 47400.
The top entrants in the EU Stations - High Power category are Igor Burykh UA3QDX (EPC # 77) with a score of 365883, Yuri Shevchenko RA6AV (EPC # 114) with a score of 344124 and Serge Zhemaitis RU3QR (EPC # 16) is in third place with a score of 341352.

Igor Alimardanov 4K5D (EPC # 157) takes the top position in the DX Stations - Low Power category with a score of 85894, Osamu Aizawa JA7EMH takes second position with a score of 51135, followed by Said Sedate CN8LI with a score of 42245. Adhi Bimbo YC3MM is the highest Oceanian station in this category with a score of 6084. The only one and winning entrant from South America is Pedro Astrada LW2EIY (EPC # 138) with a score of 3219. Emin Chijavadze 4L1QX (EPC # 203) takes the top position in the DX Stations - High Power category with a score of 365014. Second place goes to Victor Lokker RA9AU with a score of 330825, and Yuri Volobuyev UA9AFS took third place with a score of 223332. The winning entrant from Africa in this category is Peter Brucker 6W2SC with a score of 151064. Kan Yokota AB2RF is the highest HP North American station with a score of 49056. Pasquale Casale 4M5RY is leading in South America with a score of 33000. The winning entrant in this section from Oceania is Zuhrizal Oyong YB5BO with a score of 132544.

The European PSK Club congratulates all the participants on their achievement, and to thank all of you for your support of the PSK modes. Many thanks for your interest, and we look forward to see you in the EU PSK DX Contest 2007.

Anyone can join the European PSK Club (or more commonly "EPC"). Membership is FREE for any licensed radio amateur or SWL. A high quality and colorful membership certificate in PDF format is sent via email to new members when membership is granted. Each new member is assigned a unique "EPC Number" which is retained for life. Please have a look at http://eu.srars.org for more info.

Surely COM-port will not keys in this case.
But just _try_ to select LPT1 and check if problem with paddle persists.

If you don't want to move rigblaster to LPT, just disconnet
resistors from pins 8 and 9 and connect both to pin 1.

Surely, select COM-port for keying.

Do you see signal in an spectrogram window?

If not, check your soundcard settings:

Select signal source (line in or microphone input) and
record level by Windows ("Volume" in tray):

Double click on "Volume" ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

Make sure that you change _Recording_ options, not _Playback_ options.

3272. Add new DXCC (YU6)

Yahoo group: dxsoft
Date: 2006-07-27 17:56:37 UTC
From: Alexander Anipkin
Topic: 3272 Message: 3272

Dear dxsoft users,

Go to "Tools|Award references|DXCC" add YU6 as new prefix
Then in prefix list add it in the list and in additional prefixes add
another one. And the last you need delete folders (not files) in the
AWARDS folder and perform log sets rescan.

Best regards,
Alexander mailto:aia@...

Hallo Sergei,

Thank you for your fast reaction. I appreciate it very much that you
accept my idea of introducing a time stamp to TrueTTY, hi.

By the way, there has been a very favourable article about SeaTTY
in the latest edition of the German magazine "Funkamateur" (= Ham Radio
Operator.

From: David Buell
Topic: 3267 Message: 3274

That worked.

I now have rig keying through RIGblaster Pro via COM port and use of
paddle through LPT port.

Thank you for your excellent support.

DB> I tried what you suggested and the paddle lines DO NOT latch on.
DB> That's good, but of course it does not key my rig through the
DB> RIGblaster, which requires COM port keying. Can I not use the LPT
DB> paddle interface and key the rig both?

If you don't want to move rigblaster to LPT, just disconnet
resistors from pins 8 and 9 and connect both to pin 1.

Surely, select COM-port for keying.

DB> For the LPT port I am using ONLY pins 8, 9, 12, 13 and 25.

DB>> I am using a serial COM seial port for keying so that I can use the
DB>> RIGblaster as the keying circuit. Won't selecting LPT1 for keying
DB>> defeat the COM port keying?

DB> Surely COM-port will not keys in this case.
DB> But just _try_ to select LPT1 and check if problem with paddle
DB> persists.

Hello Sergei,

I am aware of the sound card settings, the program was working since ver:136 up to ver: 150. I do see the signal in the spectrogram window, but I have to raise the slider (line in) in recording all the way up. It does not make any difference if the sound card on DEFAULT or SoundMax Digital Audio. I click on Threshold on or off, all I see Gibberish, round, rectangle, stars weird symbols you name it. By the way MixW is decoding CW and RTTY ok, but I still have to slide LINE IN all the way up. Do you think it's a Propagation problem, or Corrupted program or Registration Code?

If the program continues like this for another week. Would you consider emailing me the latest .zip file and my existing code?

Tnx in advance, de Noel N3NZ

From: olenilves
Topic: 3279 Message: 3280

Hello group

Would somebody test Short Contsets feature. For example 10 minutes
rule: in default.ini, [General] section TourLength=1

All options:
0 - 1 hour
1 - 10 minutes
2 - 15 minutes
3 - 20 minutes
4 - 30 minutes

Short contest features did not work for me also with previous test
version but all older version were okay.

I got answer from Sergei about a year ago that it works fine and I
asked confirmation from group since now no responds, I am asking again

to test this and give some feedback.

In documentation of your transceiver.
Hamport just use standard CAT interface.
But CAT cable and interface are different in different RIGs.

In Kenwood TS-870S, for example, "forward" (pin-to-pin, _not_ crossover)
female-to-female 9-pin cable is used.

Hello Alexander,

Thanks for your answer.
You wrote:
Do you have the same file for all contests?

What do you mean? For other contests I pick up the needed contest from the list and I am ready to work, there is no need to make any changes in .ini files at all.

You wrote:
Note, if you select new contest and create new file "some_test.aat" you need configure this section in the file "some_test.ini"

The same story, I do not configure any .ini files for some contests. Why should I, everything is configured already, there is no need to make any changes in .ini files.

Diferent things with Short Contests section for time intervals setting. Now I have to make changes in default.ini (not in test.ini)and I have to define TourLeng= for time intervals.

Please give me some more comments. What could be wrong with my settings? What should be in test.ini and in default.ini related only Short Contests section. It works only with 1 hour intervals and TourLength setting does not have any effect on intervals.

3289. TrueTTY 2.56 beta is published

Yahoo group: dxsoft
Date: 2006-09-04 15:00:56 UTC
From: Sergei Podstrigailo
Topic: 3289 Message: 3289

Hello All,

I just have uploaded TrueTTY 2.56 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup->Other->Do not strip received NIL symbols from capture file
and exchange channels";
"Setup->Other->Put time marks to a capture file";
"Setup->MOX & Beacon->Beacon off if my callsign ... is received";
"Setup->MOX & Beacon->Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In other modes just
an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.

3291. TrueTTY 2.56

Yahoo group: dxsoft
Date: 2006-09-10 08:12:07 UTC
From: Hans-Jürgen Karius
Topic: 3291 Message: 3291

Thank you for adding a new version to TrueTTY. So far I have used 2.53 and its earlier versions with good success. It is a stable programme that decodes weak signals even under QRM and QRN. The latter appeared quite often on 518 kHz and 490 kHz NAVTEX in form of thunderstorm noise. Nevertheless I could copy station from Bahrein, Saudi Arabia, southern, central and northern Europe, Iceland, Canada east coast, Florida and Puerto Rico from my QTH in north Germany.

v2.56 has a helpful additional feature, the time stamp. It makes possible to say exactly when reception was made. So far, as I know, only 'professionell' and expensive software offers this feature. It's great. Thank you Sergei.

I experienced, however, one problem.

I start v2.56 on my notebook (Windows XP professional), open a capture file with time stamp and let TrueTTY run. After some hours it stops working. It may be 4 hours or 6, no regularity can be seen. Its window is open, the waterfall does not run. It is stuck up. The Windows Task Manager shows the CPU running at 100%. I experienced this several times, it is always stuck up.

I deinstalled v2.56, and manually cleared the registry from TrueTTY entries as far as I could. Then I installed the properly working v.253 again. And it also stuck up after some hours. Waterfall display standstill, CPU running at 100%, notebook fan blowing heavily.

For comparison I installed v.2.56 yesterday on my tower pc (Windows XP home)and let it run all night with a capture file + time stamp feature open. This morning I noticed that it was also stuck up with waterfall display standstill and CPU at 100%. This may be a hint that there is no problem with my notebook.

Why does v2.56 react this way? Why does it also happen to v2.53 after deinstallation of v2.56? The situation at the moment is that I don't have a working TrueTTY after the installation of v2.56. Has it spoiled anything?

Has anybody experienced the same? Any idea Sergei? I would appreciate your help very much.

HJK> deinstallation of v2.56? The situation at the moment is that I don't
HJK> have a working TrueTTY after the installation of v2.56. Has it spoiled
HJK> anything?

I don't think that it is 2.56 problem.
And definitely 2.56 can not affect to 2.53.
So if problem is in 2.56, it was in 2.53 too.

Can you tell me what capture file size was when TrueTTY was stopped?

Also, one "universal way" of fixing "strange problems" is to install more
appropriate soundcard driver...

I have had the same lock-up problem with SeaTTY ever since the previous version which introduced scrolling problems. I'm now running V1.71 and just shut it down with Windows Task Manager because it had locked-up and begun consuming 50% of processor resources. This has happened before, any time I let the program run for an extended period beyond.

The scrolling problems, minimized by the latest update, still occur. I noticed that increasing the size of the scrolling windows seemed to avoid the problem with display scrolling, but had no affect on the lock-up problem. Clearing the display buffers only delayed the scrolling problems, if left to run they would fill and eventually the scrolling problem would be back. Clearing the buffer is not always an alternative, so if lock-ups are related, they are inevitable during unattended operations.

Neither of these problems -- scrolling nor lock-ups -- existed before the previous version of SeaTTY which first introduced the scrolling problem, due to what I understand to be the use of new development routines.

The same question - what size of raw log file was in this case?

Probably I should do not use "unvisible buffer", just cutting receiving windows
to last 20 KBytes...

3295. TrueTTY 2.56 lock-up

Yahoo group: dxsoft
Date: 2006-09-11 12:22:33 UTC
From: Hans-Jürgen Karius
Topic: 3295 Message: 3295

Hallo Sergei,

and thank you for your reply on my lock-up observation of TrueTTY 2.56.

I've got three file sizes of the txt capture log.
- 39 Kb
- 52 Kb
- 39 Kb

I will reinstall 2.56, let it run and see what file sizes I get. In a few days I have more observation to send you.

Interesting to see that W. Curt Deegan experienced the same with SeaTTY. Hopefully his observations will also help solve the problem.

Thank you for you general words on sound card quality. Notebooks may be critical in this way. When I bought this business notebook in December 2005 TrueTTY would not run until I realized that the sampling rate was not 11025. I measured 11100 and after adjustment TrueTTY was back with good quality.
2.56 runs perfectly until it locks up, hi.

Sergei,

The last raw log I have and know was during a lock-up is 90kB, including
both the initial data and that collected after the restart following the
lock-up. This is about as large as any of my raw files have gotten lately.

3300. New CWGet User looking for more detailed documentation

Yahoo group: dxsoft
Date: 2006-09-17 18:46:11 UTC
From: paulcbg
Topic: 3300 Message: 3300

I just started using CWGet and love it. What a great program! I've
been a ham for over 30 years. I just bought the Rigblaster Plug &
Play for my Yaesu FT-897D and after just a few minutes, I've entered
the amazing world of computer assisted Amateur Radio.
I downloaded the three pages of explanation from DXsoft but I'd like
to better understand the concepts behind the many controls and how to
set the various settings. It's frustrating to get "e t e" when the
user sends an "r." For example, there are two adjustable numbers just
to the left of the AFC button that I can't find any explanation for...
Is there a book or website that has all the answers?
Many thanks!

Let's read Help-file together:

The "AFC" button (auto frequency control) adjusts the long red line (working frequency)
to the closest peak frequency. The numbers to the left of the AFC button determines
the limits of AFC. The first number is local deviation in hertzs, i.e. maximal deviation
from
current frequency. Second number is global deviation in hertzs, i.e. maximal deviation from
last user-selected frequency. User-selected frequency is shown at spectrogram by short red
line .

p> Is there a book or website that has all the answers?

Click to Help/Contents and read help-file completely at first...

Hello,

Anyone can help me how to send a "BACK SPACE" to Window TX Buffer,
please? My intention is to cancel character previously sent to the
buffer via DxsoftPutSymToTxBuffer(char sym) before it is transmitted.

Sergei, any chance to configure the "DOT" params (the length) as what we
can do with the "DASH"?

Many thanks.

???
Dot length is completely defined by "Speed" value.

Has there been any progress in solving the lock-ups reported with SeaTTY v1.71?

I continue to have problems after running for a few hours at a time. The
program stops decoding and begins consuming all processor resources allowed
to it -- 50% on my machine -- and must be forced to terminate.

The most recent failure occurred with a raw file size of just over 40kB,
after running unattended for 3hr and 20min.

Hi Curt,

You might like to check if your PC's power saver settings are set to turn off your hard drive after a set period of time, I have had problems with this in the past when leaving a PC running unattended.

Try right clicking on your desktop and then left clicking on 'properties', and then choose the 'Screensaver' tab, and click on the 'power' button at the bottom. If any of the 'schemes' are set to turn off change them all to 'never' and see if that makes any difference.

Some programmes don't like it when a PC goes to sleep, and can often hang when this comes on.

Just a suggestion worth trying anyway, this might also be a cause on Peter's laptop too.

73 for now, Alan.

Thanks for the reply.

I do not use a screen saver and am unaware of any problems with my sound card drivers. I've had no other audio programs exhibit this problem.

Can you tell me something I can do to check for a sound card problem and how to correct it? I have searched for updated drivers and have found none. My Dell Dimension 3000 system audio type is: AC97, Sound Blaster Emulation, ADI 1980 audio controller with 2.1 implementation.

Alan,

Thanks for the suggestion. That is something I hadn't considered.

However, more than once SeaTTY has locked up while I was actively using my PC with SeaTTY running in the background. Those times at least, it wasn't due to power saver settings.

Also, now that I think about it, before the more recent versions, I was able to run SeaTTY overnight on this same PC.

There was a change in the scrolling routines a version or so ago, and ever since then, it seems to me the program has not run nearly so well as before, both its scrolling and this lock-up problem.

Your point, though, is certainly a valid one to consider when any time running unattended programs.

From: roadlighting
Topic: 3304 Message: 3313

I had the same sort of problems with 1.71, emailed sergei, pointed me in the direction of soundcard etc, running it on a AMD Athlon with heaps of memory under XP, but to try and identify the problem dug out an old PC and loaded it with Win2000, tried it with it's on board soundcard then with a new PCI mounted card, and finally with a USB soundcard, all to no avail.

Eventually emailed Sergei again and asked for a copy of v1.60, and since running that I have no problems, ok you don't get the SAME/NOAA but then again I am in UK so it was unlikely that I would use it.

Hope that heps a bit.

From: W. Curt Deegan
Topic: 3304 Message: 3314

Phil,

Your observations are consistent with my recollection that the lock-up problem began with the version that first had scrolling problems which were the result of using new scrolling routines. The scrolling problem has been mostly fixed, it's still a little flaky but not nearly so bad, but the lock-ups continue.

Your idea of going back to v1.6 is an interesting one. Like you, I don't use the new features. Being a good pack rat, I still have the install package for v1.6. I only wonder if any improvements in decoding might be lost by so doing. SeaTTY continues to be far better at that primary task than other packages I've tried.

3315. aalog request

Yahoo group: dxsoft
Date: 2006-10-10 16:35:02 UTC
From: dave
Topic: 3315 Message: 3315

Hello Alexander,
I am a member of the European Psk Club and an AALog user,
is it possible in a later upgrade of AALog to have the facility for
the operator to name two or three custom log fields for example as an
EPC club member it would be handy to have a column for the membership
number of other members worked, and also a column for their EU area
code If this is a possibility it would be greatly appreciated.
regards
Dave gm6jua

3316. Swains Island

Yahoo group: dxsoft
Date: 2006-10-25 03:52:30 UTC
From: Paul Beringer
Topic: 3316 Message: 3316

I got a QSL for the KH8SI DXpedition. I can't find an entity for Swains Island in the awards manager. KH8 is listed as American Somoa. According to the ARRL DXCC list dated April 2006, Swains Island is a separate entity. Is there an update for AAlog that includes this entity?

3319. SeaTTY message decode quality score.

Yahoo group: dxsoft
Date: 2006-10-28 10:36:14 UTC
From: W. Curt Deegan
Topic: 3319 Message: 3319

Might it be considered to add a "decode quality score" to each NAVTEX message received by SeaTTY?

The idea would be to measure missed characters or other indications of message reception integrity, and present it as a quality value as part of each message.

This would serve to immediately flag potentially inaccurate messages received from poor signals.

It could also be used -- when collected for a specific NAVTEX station -- to give some representation of signal propagation conditions. A quick and easy indication of reception characteristics from different, known locations.

Just an idea I had. Other's opinions would be appreciated.

Curt

3324. cwtype: dots/dashes from paddle

Yahoo group: dxsoft
Date: 2006-11-10 15:59:58 UTC
From: Wim
Topic: 3324 Message: 3324

hi

Just upgraded to cwtype 1.51.
Now each time I start cwtype I have to change DotAndMask=10, DashAndMask=20 because when I startup they are always DotAndMask=20, DashAndMask=10 which means that dotpaddle give dashes and dashpaddle give dots.
So despite DotAndMask=10, DashAndMask=20 in cwtype.ini, after startup they are DotAndMask=20, DashAndMask=10 in the setup screen.....!!??

please help, Wim pa0wrs

note:

these are my cw settings.

Topic: 3324 Message: 3328

Sergei, sorry for typo I upgraded to 1.55 indeed.

Of course I saved the setup settings (after changing to DotAndMask=10, DashAndMask=20) but despite SAVING when I start cwtype up again the old settings are restored (DotAndMask=20, DashAndMask=10) while they are DotAndMask=10, DashAndMask=20 in the cwtype.ini file !!
So EACH TIME I start CWTYPE and I want to use my paddle I have to open Settings and change DotAndMask=10, DashAndMask=20, and SAVE these settings, which is very unconveniable.
Wonder if I'm doing anything wrong, is it older version still on computer in different map? (I keep older version until newest version works ok).

3329. Newbie question - AALOG / CWGET

Yahoo group: dxsoft
Date: 2006-11-11 04:50:05 UTC
From: windsaloft2000
Topic: 3329 Message: 3329

An enhancement request and a bug? or operator problem. First the request. I have linked AALOG with my Buckmaster Hamcall database. I like to manually fill out QSL cards after the qso. Would it be possible for AALog to display the mailing address somewhere in the QSO window so it could be (manually) copied? I have to open a separate HamCall window to do this (and type the callsign, too).

Second, I've noticed that when CWGET captures a Callsign from the received text, it puts it in AALog's Callsign field (slick!), but it doesn't update the QTH info if the callsign is modified. So for instance if you capture the wrong callsign from CWGET (and populate AALOG's fields), THEN realize you captured the wrong callsign, go back and capture the RIGHT callsign, AALog's Callsign field is updated, but NOT the QTH info. It is not updated.

Am I missing something?
73, and Thanks for a great DXSuite!
Darrell W4CX

Topic: 3323 Message: 3331

Sergei,

I did not see the notice about SeaTTY v1.72b, the message never made it through for some reason. I did see the latest notice though, and downloaded it immediately.

I ran SeaTTY v1.72c last night for about 15 hours with no lock-up problem. The collected raw file was 158kB, half again the size that used to be sure to cause a problem. During this time the display buffer was not cleared either, another area of possible concern with the previous version.

This was only the first time I have tried the new version, but it seems the lock-up problem has been solved.

Topic: 3323 Message: 3333

Seemed to lock up after 24hrs constant running, will try a couple more times. Looking at the task manager, seemed to be taking 100% of processing time, when I managed to close the application this fell back to normal levels. Now running a parrallel test with another machine running v1.60 (which did not appear to have the problems and 1.72

Hopefully this helps indicate if it is a version error.

Yours,

Phil

3334. TrueTTY 2.57 is released

Yahoo group: dxsoft
Date: 2006-11-21 12:45:39 UTC
From: Sergei Podstrigailo
Topic: 3334 Message: 3334

Hello All,

I just have uploaded TrueTTY 2.57 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In other modes just
an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.
Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.

This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.

Good morning

If you have an opportunity, check out the EMTECH web site at:

www. emtech.steadynet.com

They are located in Bremerton, WA 98312. Their phone number is
(360) 405-6805.

You can also try QRZ.com and go from there. Best of luck.

Sorry Sergei,

I have gone back to v1.60 as v1.72 still keeps soaking up all the
resources.

software

3344. Re: [dxsoft] Re: SeaTTY 1.72c

Yahoo group: dxsoft
Date: 2006-11-28 19:56:17 UTC
From: W. Curt Deegan
Topic: 3323 Message: 3344

After regular lock-ups with earlier 1.7x versions of SeaTTY, I have
run v1.72c on several occasions overnight for at least twelve hours
and had no problem. This was more than long enough to cause problems
with previous 1.7x versions.

Anyone experiencing continuing problems should check to be sure they
have the version 1.72c release. When the SeaTTY program is started,
"1.72c" will be displayed in the receive window. Clicking Help/About
will only show version 1.72 (without the "c" suffix), so the receive
window display is what must be checked to assure the latest version
is being used.

There has been no explanation offered as to what was fixed in v1.72c,
so there is no way to know if it could be specific to a version of
Windows, or some other consideration. The previous assertion that
the lock-up problem was caused by user device drivers does not seem
to have been correct. Just what the problem was is so far
unspecified. A bit more communications on the changes made in new
releases would be appreciated.

I am now using v1.72c regularly, though I do still have v1.60, just in case.

3346. Interface for Icom 737

Yahoo group: dxsoft
Date: 2006-12-03 23:06:57 UTC
From: Larry Drake
Topic: 3346 Message: 3346

I have read thru some of the postings and havnt ran across the solution to my problem. I have the interface cable built with a circuit to key the rig. To key the rig I am connected via the mic plug. for the actual CW I have tried to hook up to the key port on the back of the rig.. So far, This isnt working. Atleast not in cw mode. If I choose LSB it will work. I know this isnt the prefered method, so was hoping for some suggestions.
Thanks,
Larry

>Hi Larry, If you are trying to run cw on the cq100 the best way I have found is to use the side tone from your rig only. I am doing this by placing a stereo jack adapter on the external speaker jack and running a stereo extension into the audio line in on the computer. No interface required this way on question mark select audio input on options select properties and there select stereo mix only click ok and everything should work. For other setups refer to Chapter 5 on the ARRL radio operators manual.
Good Luck 73

In MicroKeyer Router, I have set up a virtual COM5 which I want to use for controlling my TT Omni VI. OmniRig only gives me the choice of COM1 through COM4. I have rebooted after building the Virtual COM ports, but no change. Has anyone had experience with OmniRig and MicroKeyer? 73, Darrell W4CX

3350. CWget feature wishlist

Yahoo group: dxsoft
Date: 2006-12-08 05:00:26 UTC
From: nativeMT
Topic: 3350 Message: 3350

I purchased CWget and find it a very handy tool. However, I notice it has a hard time decoding CW sent by bugs and like keys that sent very short dits, but the overall wpm is slow.

I feel adding the capability to manually set in the wpm decode speed will allow a user to fine tune the decode effiency and capture a wide varity of fists.

thanks,
Corey

Surely, if sender send _wrong_ morse, CwGet will get wrong text.

n> I feel adding the capability to manually set in the wpm decode speed
n> will allow a user to fine tune the decode effiency and capture a wide
n> varity of fists.

I think is not very good idea - to fine setup CwGet to decode every bad operator...

More over, you need to set up not just wmp speed in this case,
but dot length, dash length, letter space ...

3352. SeaTTY 1.73 is released

Yahoo group: dxsoft
Date: 2006-12-08 11:25:13 UTC
From: Sergei Podstrigailo
Topic: 3352 Message: 3352

Hello All,

I just have uploaded SeaTTY 1.73 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========

SeaTTY versions history

V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
V1.70
Minor improvements of raw log files handling were made.
V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
[...]

3353. Re: CWget feature wishlist

Yahoo group: dxsoft
Date: 2006-12-08 13:59:27 UTC
From: nativeMT
Topic: 3350 Message: 3353

Sergi,
I wouldn't say they are bad operators, but ones with unique fists.
What I see happening is CWget decodes at a wrong speed and transcribes
a bunch or "e" & "t" when infact the sender is sending legible code.

Let me give an example of what I have done to "trick" program to
decode the questionable senders. I would find an operator sending in a
qso where the program decodes incorrectly because the wpm is off (says
its 22wpm when its closer to 12wpm). Next, I switch to a dummy load
and send at the speed of the other operator and speed lock the program
near 12wpm. Then I would switch back to the antenna and CWget now is
decoding the opperator at near 100%. I have done this trick a handful
of times and it works everytime.

This test is the basis of my orignal comment. I don't expect you to
incorporate the feature, but felt you would appreciate feedback from a
customer using the program on a daily basis.

Best regards,
Corey

Gentlemen
"Talk anywhere in the world with no qsb, qrn, qrm,
and no antennas or worries about propagation." EH?
What does internet communication have to do with ham radio? Anybody can talk over the telephone, Skype, MSN etc. Surely ham radio is communication via the ether by those of us who have earned a licence - not an international network of cables and public com links that anybody can use.

3360. CWGet startup settings

Yahoo group: dxsoft
Date: 2006-12-11 11:20:37 UTC
From: Julian
Topic: 3360 Message: 3360

I am interested to use CWGet in a project to monitor HF propagation beacons. Is there a way to set the receive speed to a fixed speed, and store this in the settings used at start-up? Is there a way to start CWGet and specify the settings file to use (e.g. a command line option?)

Julian. G4ILO

No, you can only "lock" current auto-detected speed...

J> Is there a way to start
J> CWGet and specify the settings file to use (e.g. a command line option?)

CwGet looking for cwget.ini in the current directory.
So just change "start-in folder" option in software shortcut.

That's a pity. The speed changes as it tries to decode noise, and so
when a beacon appears, the first character or two of the beacon
callsign is often lost. I thought that perhaps locking the speed to
the known speed of the beacon transmissions might solve the problem.
Sitting with the mouse poised over the Sp Lock button waiting to click
it when the correct speed is detected is not a very practical workaround.

What does internet communication have to do with ham radio? Anybody can talk over the telephone, Skype, MSN etc. Surely ham radio is communication via the ether by those of us who have earned a licence - not an international network of cables and public com links that anybody can use.

Off topic, but, I had to learn,study and pass an exam before I could ask for that priviledge. A license is the reward for that work. That is the difference between those who are authorised to use a radio transmitter on amateur bands and those who are not. As you say, much like a driving license, those that can't pass the test, can't drive a car. The internet is like riding public transport - no priviledges.
Nothing unfortunate about that.

3366. Re: Interface for Icom 737 Update

Yahoo group: dxsoft
Date: 2006-12-12 01:54:34 UTC
From: Larry Drake
Topic: 3346 Message: 3366

Just an update for everyone, I have figured out the interface problem
this past weekend and was able to work 37 contacts in the 10mtr contest.
I appreciate all the suggestions and help. Myself, I enjoy the radio,
noise, wires running all over the shack. The headaches of trying to
figure out why something works, or doesn't..Hi Hi.... I got my first
license in 1991 with the intent to use it to its fullest, and enjoy all
the modes. So far, I have benn doing that a little at time. Someday, I
hope to be sending CW in the traditional way, but for now I'll be using
the digital version ie: Cwget & CWtype. I have an Extra class license
which I earned. IE: I had to study and pass all the required tests.
I think perhaps that the main point of my seeking help with the
interface problems I was having lost focus. But hey! it works now so,,,,
Maybe We will all run across one another somewhere on the bands on one
of the many modes tha Ham Radio has to offer.....
73 & Hope to see you down the log..

It may be a privilege, but it still has to be earned. The privilege is not granted to just anyone. And I don't see what that has to do with the point Malcolm was making, that talking across the Internet is voice over IP, not ham radio. If the powers that be see that hams will use the Internet as an alternative to radio, it will be hard to justify retention of our valuable spectrum allocations.

Well, you could equally argue that using CWGet to copy code takes the fun and skill out of Morse operating.

I never heard of this system until I read the posting here yesterday. My initial feelings about it were much the same as you. But I was intrigued enough to actually try it out and now I disagree with you.

A few users seem to have missed the point, and are talking about working "DX" and sending QSL cards for contacts. Some of them may live in retirement homes and other situations where it is not possible for them to engage in real radio activity. Why shouldn't they still play at radio? The people I spoke to all realise that it is not radio. If you just regard it as a closed Internet chat service for hams with a ham-friendly user interface then it is actually a lot of fun, as well as a potential off-air training ground for operating practise, learning CW and more.

People who can't read code are using CWGet to copy code that is sent there, which they can because it is a well-written program that will share the sound card with the CQ100 program. If that encourages people to be interested in CW then that is no bad thing, surely?

Hi Sergei,

Firstly, I'd like to thank you for three great products - TrueTTY,
CWGet and SeaTTY. I use them all on a regular basis.

Have you thought about designing an OLIVIA decoder module for TrueTTY?

I feel this would make TrueTTY an excellent piece of decoding software.

Keep up the good work.

Regards

Chris (Shortwave Listener - grid IO91kw)

3380. SeaTTY not detecting fax stop signal

Yahoo group: dxsoft
Date: 2007-01-10 19:10:53 UTC
From: Jim Shaffer, Jr.
Topic: 3380 Message: 3380

Is anyone having problems with SeaTTY not detecting the stop signal at the end of a fax transmission? It seems to be a problem with Halifax, Canada, although at this time there seem to be very few other signals coming in clear enough to test.

3381. Re: SeaTTY not detecting fax stop signal

Yahoo group: dxsoft
Date: 2007-01-15 16:33:53 UTC
From: Jim Shaffer, Jr.
Topic: 3380 Message: 3381

I tested last night with New Orleans, the 2nd-strongest signal I could receive, and the stop signal was still not detected. The signals haven't been very clear at times due to poor propagation, but the last program I used, WXsat, had no problem detecting the end of the transmissions under any conditions, even if it had trouble detecting the start tones. I had to switch programs because I'm now using a WinRadio G313e which doesn't have its own analog audio output and WXsat was so old that it wouldn't recognize the WinRadio Virtual Sound Card driver that lets the audio stream from the radio's decoding software appear as a second sound card to other programs.

> But it is better than "false stop" ...

Yes, better than false stop, which some other programs have a great problem with. But still inconvenient when auto-save is on, because later images aren't in sync with the first one and some stations send RTTY or voice or go quiet between faxes.

3384. CwType 1.57 is released

Yahoo group: dxsoft
Date: 2007-01-18 11:43:33 UTC
From: Sergei Podstrigailo
Topic: 3384 Message: 3384

Hello All,

I just have uploaded CwType 1.57 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.
V1.55
Some minor bugs were fixed.
V1.50
More convenient input window behavior was made.
"Ctrl/+" , "Ctrl/-", "Alt/+" , "Alt/-" keystrokes at main keyboard can be
used to change CW speed now.
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The "Tx at keyboard, if at least NN symbols are entered" option is made
in the MOX setup.
The ~[lf] macrosequence can be used to insert a new line (CR+LF) into
Input window now. It is transmitted just as space.
V1.36
Typo error in the "Key/PTT port pins" setup area was fixed -
pin numbers of D6 and D7 outputs of LPT-port were wrote wrong.
V1.35
Documentation was updated.
Some minor changes were made.
V1.34
The "Setup" menu was fully rewritten.
RigExpert interface and control via OmniRig are supported now.
Some minor options were added.
Some minor bugs were fixed.
[...]

3385. Rotation in SeaTTY

Yahoo group: dxsoft
Date: 2007-01-18 15:59:48 UTC
From: Kjartan Andersen
Topic: 3385 Message: 3385

First of all, my compliments to a series of brilliant programs. I use SeaTTY and CWget with success. I have however a small and irritating problem with SeaTTY when receiving HF-FAX. Often the rotation is changing during a reception. So I have to use a picture editor to fix it. It would be very nice to have the possibility to rotate part of the picture.

Anyone know the reason why this happens?

3386. Re: [dxsoft] Rotation in SeaTTY

KA> Anyone know the reason why this happens?

It is problem of soundcard or soundcard drivers.
When this occurs it means then one or more sound buffers are lost...

From: Jim Shaffer, Jr.
Topic: 3385 Message: 3387

How fast is your computer? I had this problem with fax a long time ago with other programs. I think my computer wasn't fast enough to keep up with the data stream. On my first computer I had to be careful of not running large programs such as web browsers while receiving. On faster computers I didn't have that problem, but I would still have trouble with things that seriously reduced system performance such as the Windows indexing service and automatic restore point creation. These things can be disabled either temporarily or permanently.

One other problem I had was on a new Dell Pentium-M laptop that should have been fast enough to keep up. Even after disabling every unnecessary service running in the background, I would still get random slips of the fax picture. I discovered that Dell had connected both the sound chip and the video chip, and almost everything else in the system also, to the same IRQ channel! Dell claims that interrupt sharing should not be a problem with Windows XP, but it's obvious that neither they nor Microsoft ever tried running a real-time system with such a ridiculous setup.

I know people have been receiving fax on computers since computers were very slow, but such old systems would typically be running DOS or old DOS-based versions of Windows that didn't have so many background processes or complex sound and graphics chips.

Thanks for a quick response. I will try with full hardware
acceleration on my Soundblaster Audigy 2 and see if it helps. I think
my computer is fast enough too (Intel Pentium 4, 2.66GHz CPU and 2G RAM)

Alas, no change. Obviously the Icom PRC 1500 has problems with
transfering the audio to my PC via the USB without loss in buffer.
Probarbly nothing to do with it.

Looks like I have to fix the faxes in photoshop afterall :)

But thanks for the help.

Ops, I have idea!

Probably I need to try to make big buffer (11025 samples, i.e. 1 seconds).

In this case lost buffer is lost exactly one ore two scan lines, without
horizontal picture moving...

From: jrwhutson@aol.com
Topic: 3392 Message: 3392

Hi, I have just joined your group and would welcome some advice.

I am learning Morse, but finding it slow, so require a programme which will decode and later when I become more competent, provide a back up.
In addition I will use PSK31, and also require to receive Navtex and weather fax for use while sailing.A logging programme will also be useful
DXSOFT can provide most or all of this, but I have also been looking at MixW which can provide all of that in one registration.

What is your advice?

Slow is OK. Decoding programs will not work as good as good ears :-))
Decoding program maybe useful if codes are sent in a standard format but
they will not functioning at all on bad-fingers or bugs-keying.

So, my recommendation is : "Train your ears" :-))

Tibou,

connecting a FAX machine to a Radio will never work. A FAX machine requires a phone line. The FAX machine does send in half duplex, nevertheless, the answering machine will respond immediately, so it needs a full duplex phone line. FAX uses phase modulation, any phase shift on the transmission path will result in errors. Therefore there is no way to make this work with a HF radio.

Besides this, it would be illegal to use business communication on amateur frequencies.

Hi,

I am having great difficulty in finding how to contact DXSoft. I want to buy SEATTY the weather fax software package. Before doing so I need an answer to a question.
I want to use this package on an old laptop which does not have internet access. I therefore cannot download directly to the laptop. I have tried copying the trial software via CD but it will not operate properly. Can you tell me how I can get SEATTY on to this laptop. Can I get a CD with the programme or is there some other way.

Thanks

Jack Hutson

jac> the trial software via CD but it will not operate properly.

What exactly problem is?
I hope your old laptop is not _too_ old (at least Pentium 200)...

jac> Can you tell me
jac> how I can get SEATTY on to this laptop.

You was right - just copy zip-archive or unzipped setup.exe to disk and
install it on laptop.

jac> Can I get a CD with the programme or
jac> is there some other way.

You can purchase "CD-ROM delivery", but you will get the same file on CD,
so if it don't work now on your computer, new copy will not work also...

So let's find what problem was with your copy...

Sergei,

I think I have got the software on to my laptop as you suggested. I am still having difficulty in getting a readable image. I am using usb and I am getting a single peak rather than the double peak your web site suggests. I have tried varying the frequency, the input volume but no improvement. I also cannot get the vertical red lines to move. The AFC buttons do not have any effect. Can you help again?

Thanks

Jack

If you mean FAX mode, there are not sharp peaks in signal.
Just wide signal at spectrum (some wider then space between vertical red lines).

jac> I have
jac> tried varying the frequency, the input volume but no improvement.

But what you got?

jac> I also
jac> cannot get the vertical red lines to move.

Just drag them by mouse. But you can not move them below about 1700 Hz in a FAX mode.

jac> The AFC buttons do not have any effect.

In a FAX mode AFC works only during phase lines receiving.

From: Isidoro FLORES
Topic: 676 Message: 3415

Dr Sergei,

I un-installed cw get because of computer problems and when I re-installed it, it did not want to decode properly. There are no waveforms to indicate that it is receiving any signals. I am using it on cq100 virtual internet program and it worked perfect before I un-installed. All other programs working ok. Please inform. Thank You

Check _recording_ settings in your soundcard mixer:

Double click on "Volume" icon in system tray ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^
Make sure that you change _Recording_ options, not _Playback_ options.

Probably you need select "What you hear" input for recording.

Check which soundcard is selected in CwGet also...

And make sure that "Logarithmic spectrogram" and "Logarithmic oscillogram" are selected.

PB> Where are they and how do I get them back?
PB> Paul NG7Z

The best way was to install update, not full package.
Now you need append logs into log list.
Press Ctrl+N select your old log file (in folder \log), enter description of
the log and save it.

3427. CWGet

Yahoo group: dxsoft
Date: 2007-02-21 14:11:37 UTC
From: Federico
Topic: 385 Message: 3427

HI All,
I'm new to this group (and I'm happy to see Sergei to made part of
it).
Just a question about CWGET
I'm using it a few months and I find it very helpful to my very poor
CW ears (i was always been a ssb man...), probably best software
i've
tried.

My problem is to use it correctly in poor s/n ratio where my ears
still well copy weak notes in between noise but CWGET decode only
casual carachters.

What are best setting to achieve good decoding capability with high
qrm and low signals ????

In a previous post i've read that it cannot replace human hears but
it
helps, why a p.c. potential cannot suck even unclear notes from
qrm ???

Just a consideration , CWGET do a GREAT job in filtering and
tracking
signals, i.e. we can use a 1.8KHz radio filter even in crowded band
and
CWGET is capable to follow and decode desired signal.
What about instead, let radio filtering to do major job and let
CWGET
to work only toward filtered signal ???

I've noted this way won't work so well....
So , even filtering with 250HZ and APF in my IC7800 , setting CWGET
filter lower than 140HZ makes things worse.
I can also decide to shut CWGET AFC (and center tuning with radio)
but
no improvements are achieved.

I just ask myself if it is possible (or why not) for this Software
to
decode into a dot or dash even most dirty or distorted note made of
an
exact frequency (i.e. 800Hz) when our ears can.

I mean : lets keep our weak dx signal , it can be louder or weaker
(qsb and volume), more or less clear , more or less covered by
qrm/qrn but it is always made by same frequency, we must only
understand by its duration if it is a dot or dash.

Where is difference between our ears and more powerful electronic capability ????

Anyway, well done Sergei !!!!!!

Thank you all

Federico IK3UMT

fEDERICO

I have found that a seting of 300 hz for a filter workd great.If you can't get that narrow as I can with the Ten=Tech Pegasus use the narrowest filter you can.Tune the C.W.signal to 700Htz read on the bottom left screen on the cw gwt scgeen.Use auto get,on top,auto theshold and afc.You will find the faster the C>W. the less errors you will have.It works great best I've seen yet.

Hello All,

I really haven't been following this thread, so I may be just showing my ignorance, but when I read the last post it occurred to me that perhaps you were trying to get sound card cw (audio) out of the RigBlaster instead of direct keying. CWType uses direct keying, so use the CW Out connection to the 706's key jack, and select CW on the 706's mode switch.

I have neither a 706 nor a RigBlaster, but that thought just surfaced and perhaps it will help someone.

73 to all,

Ed W4HTD

CS> What must I do to get it to respond.

At first, read documentation completely.
At second, set up your soundcard mixer:

Select signal source (line in or microphone input) and
record level by Windows ("Volume" in tray):

Double click on "Volume" ->Option->Properties->
(Recording;Show the following...;OK)-> ...
^^^^^^^^^^^^

Make sure that you change _Recording_ options, not _Playback_ options.

==========
CwGet Versions History

V1.55
A text in the receiving window is not truncated automatically now.
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.
V1.47
A problem of frequency control of some RIG types was fixed.
When the "Setup->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V1.46
The "Setup->AFC at Mouse Click" option was made. When this option
is selected CwGet make fast AFC to near station after mouse
click on spectrogram regardless of the "AFC" button state.
The "Setup->Tune RIG by" menu switches on the mode of automatic
transceiver frequency control. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram or by "GoToMax" command. Tuning can be
made by RIT or by VFO according selected option. Take to attention
that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface

(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V1.45
User can select soundcards used for sound input and output by
"Setup->Input Sound Card" and "Setup->Output Sound Card" menu now.
[...]

Much improved, but cannot get the page to open full screen.
It opens in the lower right hand corner of my screen and
I cannot get it to fill the screen.

What do you mean when say "I can not" ?

Please describe a problem more clear.

I didn't find any problem with window resizing or maximization ...

I click on the icon and the page opens in a 4 inch by 4 inch template
at the lower
right corner of the screen. I tried to load this on two different
computers and both
did the same thing. When I loaded the program it automatically
replaced the V 150
version that was already installed. The V 150 version always opened up to the
full screen. Something is causing it to resize.

Cannot move the block to the point where I can access the resize block
in the upper right hand corner and there are no pull downs on your
page for resizing.

Did not work. Pulling the window across the screed (from right to left)
only is permitted to about 3/4 of the way across the screen. Again,
cannot access the resize box. Would this problem have something to
do with registering this download? I have already paid for the V 150 version.

The program CwGet works through a sound card.. Does Toshiba T1200 have the sound card? :) Also needed at last Windows 95 on laptop (on Toshiba T1200 worked Windows 1.03 only)

Hello Konstantin Magda,
Mni tnx dr ur msg. I already had the idea that what I asked for is not possible. There was a time that I could decode CW by means of a ZX Spectrum and later a Commodore 64. For me getting CW is best by ear although I am not very experienced on that becaus I like to talk to other amateurs in there native language when possible of course. I do speak English, German, Frenche, Dutch, some Malayan, some Spanish and a very little Hungarian and I do lik eto keep that up as long as I can.
Unfotyunately the language in the written form is unknown by me.
gd luck es

3452. Re: CwGet 1.55 beta - Screen Sizing

Yahoo group: dxsoft
Date: 2007-03-08 20:50:51 UTC
From: Chris
Topic: 3438 Message: 3452

Hi Gary (& Sergei)

I've noticed this re-sizing problem myself but I believe it is a problem with Windows and XP in particular.

I run Windows XP and with several programs, obviously some time in the past, I've decided to run the program in full-screen mode. There are two ways (at least) to maximize a window. Firstly, you can click on the maximize icon in the upper-right of the window pane; secondly, you can click & drag the edges of window...or at least that was what we were able to do at one stage.

However, what I've noticed now is that when my window has been clicked & dragged to fill the entire screen, there comes a point when you cannot re-size the window by clicking & dragging the edges of the window...we seem to have lost the double-arrowed mouse pointer that permits re-sizing.

What I had to do to regain re-sizing control of a window was...move the cursor to the extreme bottom-right of the window (there seems to be a dotted triangle in that corner) and once your standard cursor changes to the double-arrow, then you can re-size it as before.

Getting the cursor towards the bottom-right dotted triangle is easier said than done. On my system, my Task Bar is at the bottom of the screen, with the 'auto hide' enabled. So, as the cursor approached the bottom, the task bar popped-up on top of the dotted re-size triangle. The solution was to move the task bar to the side of the screen temporarily until I could re-size the window.

I do not know if this is the same problem you have; and I don't know if this problem occurs in other versions of Windows.

I hope this helps Gary.

Regards

Chris (UK)

At me too was home made ZX Spectrum (include keyboard :-)).
In those days programs have been adhered to "hardware". For example: the program for ZX Spectrum does
not run on Commodore.
Now programs are adhered to operation system. For example, the program
it is not important, what processor at you, Pentium-II or Athlon 64.
The main thing that was Windows.

R> For me getting CW is
R> best by ear although I am not very experienced on that becaus I like to talk to other amateurs in there native language when possible of course. I do speak English, German, Frenche, Dutch, some

Try to learn CW. I can give the reference to programs for studying.

73 Chris I5nph

In principle yes.
I use skype codec for remote CW and so far that is the best codec available. I know some DL guys use skype for remote EME.
I heard a new codec by an SM5 guy, which is said to be even better for CW.

You would be far better off, if you learned CW. :))

From: Gary Matteson
Topic: 3438 Message: 3455

Chris and Sergei

Chris your solution prompted me to re-look at the CWGET 155
page. I went to the upper left corner and clicked on the Icon
(not the pull downs) and sure enough there was a resize button. I
clicked on that and the page filled the screen. Unfortunately,
when I went to save the screen set up it did not save it, but indicated
that I had to register the CWGET 155. Fortunately I had save
the "code" from my earlier purchase of CWGET 150. When
that was inserted, the page staid as a full screen presentation.

Life is now good on CW.

Thanks!

Gary

DXSOFTIO.SYS is a 32-bit dtiver, so it doesn't work under 64-bit OS.

In your case CwType should work if you don't use LPT-port and internal speaker...

Best regards,
Sergei mailto:amx2@...

3458. CWType on NT2000 serial port question

Yahoo group: dxsoft
Date: 2007-03-10 16:30:41 UTC
From: Paul
Topic: 3458 Message: 3458

I'm helping a ham put CWType on his laptop running NT2000. When we try
the Windows API configuration we get an error saying the port is busy.
I use Windows 98SE on an old Pentium II. No problems. If anyone is
using NT2000, what is your port setting? Did you have to download a patch?

We are using a plug made by AB6CQ. I think it detects RTS switching
but I see we can choose that via configuration. T/R will be the QSK
features on a Kenwood 440 so we just need to key the jack.

I don't think the guy wants to go back down to Win98SE and I don't
think the laptop can handle XP - so I'm kind of stuck on NT2000.

Any advice on this would be appreciated.
73,
Paul

Make sure that another software doesn't use this port in the same time.

P> I use Windows 98SE on an old Pentium II. No problems. If anyone is
P> using NT2000, what is your port setting?

"COM-Port via Windows API" and real number of used COM-port.

P> Did you have to download a patch?

P> We are using a plug made by AB6CQ. I think it detects RTS switching
P> but I see we can choose that via configuration. T/R will be the QSK

I don't know what is NT2000 :-) , but CwType works under Windows 2000
without problems.

I'm new to using AA Log. The splash screen alludes to "disabled functions" to an unregistered copy. What extra functions do I get for registering?

Thanks

Dave

From: Paul
Topic: 3458 Message: 3461

Sergie,
We solved the problem. The system was Windows 2000 and the problem was even though this laptop only had one serial port, the hardware profile called it COM2 So I had to set the configuration to COM2 instead of COM1. Next, the plug from AB6CQ switches the RTS line so I changed that in configuration and everything started to work. it is sure a great program. If I were to make one little tweak I'd have the speed adjustment in Words per minute rather than characters per minute. But can divide by 5 pretty easily and it is not a control that is often changed.

Thank you for a fine product.
73,
Paul

Andres,
Yes, I can SEE it there - but to adjust it to a certain WPM don't I need to multiply the desired wpm by 5 and adjust the cpm (characters per minute) above the text window by the macro buttons. Perhaps there's a macro sequence I could use to set the speed at at a particular word per minute. Then I'd set up three for slow, medium and fast word per minute speeds (17/22/28 wpm).

73,
Paul

From: Federico
Topic: 3466 Message: 3466

Hi All
A question to Serge (and others who have experience on)
What is the relevance of sound board quality ???
(Bandwidth, sample rate, ecc.ecc)

Is there any differences in CWGet performances when using a 10$ vs a
200$ soundboard ???

Please let me know

Topic: 3466 Message: 3467

Hallo,

there is a special soundcard tester on:

http://www.b-kainka.de/iqrx3.htm in German language.

There is a tester with a 555-ic and some screens to see several types of behaviour. Simply to build. It is specially designed to test simple features as mono/stereo-ability and further proper function of the soundcard for I/Q-purposes in receivers. Have a look on this page.

Sample Rate:

The higher the sample rate, the better could be the quality of decoding for Software Defined Receivers. But there is an experience at a lot of users, that a very simple souncard could be the best.

For I/Q-purposes one should have a card with 96, 192 kHz samplerate. But programms will work from 48 kHz on.

Anti-Aliasing-Filter:

Especially for I/Q-decoding the filtering of a soundcard seems to be existential. Even some words to this problem, You will find on the www.b-Kainka.de. And one could test actual cards with this very simple circuit to build.

Very strange effect:

There are soundcards which do not work exactly synchronous with signals in stereo function. In these cases ther are little phase shifts in working of the card, which are not usefull for decoding especially I/Q. Even, if one combines to signals in mono to both left and right-inputs could be disturbing.

In General:

Mostly not the best solution is an onboard-soundcard.

Next on is an additional soundcard in the computer.

Best seems to be an USB-Soundcard.

This refers only to decoding by software. General - or normal - working is out of view by me.

Have a look on Your soundcard. Test soundcards of friends and find Your personal optimum.

$200 soundcard is definitely overpriced for CwGet :-)

More over, it can be hard to switch OFF useless bell and whistles ...

CwGet open soundcard in 11025 Hz/16 bits/mono mode.

So you just need simple good soundcard :-) (With line-in input, low noise...)

Hi,
thank you all for replies

In fact, i've bought a brand new 18$ Terratec 5.1 soundboard , which
is equipped with optical S/Pdif input/output and I've connected my
IC-7800 S/Pdif I/O (avoiding further ground loops !)
It seems to work great anyway (it has a 48KHz sample rate)

TNX again

3470. Log summary

Yahoo group: dxsoft
Date: 2007-03-21 00:44:40 UTC
From: Paul Beringer
Topic: 3470 Message: 3470

I did a log summary by clicking "Tools"--"Log summary" and discovered something very interesting. Under the "Contacts by continent" list I have 47 unknown worked and 7 confirmed. I suspect that these contacts are not part of the DXCC list that AAlog uses. Since I'm just 11 away from 200 DXCC confirmed, I'd sure like to isolate these contacts and correct them so the count is accurate. Does anyone have any ideas?

3471. CwGet 1.60 is released

Yahoo group: dxsoft
Date: 2007-03-21 07:53:39 UTC
From: Sergei Podstrigailo
Topic: 3471 Message: 3471

Hello All,

I just have uploaded CwGet 1.60 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

Feedbacks are very welcome!

--
Best regards,
Sergei

==========

CwGet Versions History

V1.60
Minor bugs were fixed and some minor improvements were made.
V1.55
A text in the receiving window is not truncated automatically now.
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.
V1.47
A problem of frequency control of some RIG types was fixed.
When the "Setup->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V1.46
The "Setup->AFC at Mouse Click" option was made. When this option
is selected CwGet make fast AFC to near station after mouse
click on spectrogram regardless of the "AFC" button state.
The "Setup->Tune RIG by" menu switches on the mode of automatic
transceiver frequency control. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram or by "GoToMax" command. Tuning can be
made by RIT or by VFO according selected option. Take to attention

that not every transceiver has programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via OmniRig software interface
(see http://www.dxatlas.com/omnirig). Hamport software
(http://www.dxsoft.com/en/products/hamport/) uses this interface also.
V1.45
User can select soundcards used for sound input and output by
"Setup->Input Sound Card" and "Setup->Output Sound Card" menu now.

3473. CWGet Stopped?

Yahoo group: dxsoft
Date: 2007-03-27 01:47:51 UTC
From: azradiorick
Topic: 3473 Message: 3473

Sergei,
I like CWGET so much I loaded it on a friend's station when he asked me what to 'get' :). It seemed to work for a while then stopped. We get rig audio through the sound card to the computer's speakers. We can download streaming audio from the web to the computer's speakers. Neither CWGET or MTTY or another program can "hear" the audio going through the sound card. Tried re-installing CWGET, no good. Can't re-install sound card as we cannot identify driver. Do you think the sound card might be bad or are we missing something else?

Thanks,
Rick

Yes, you are missing reading documentation :-(

Let's read it together:

=====
To choice of a signal source (line in or microphone input) and record level do that steps:

Double click on "Volume" icon in tray,

then go Option->Properties->(Recording; Show the following...; OK)-> ...

Make sure that you change _Recording_ options, not _Playback_ options !
=====

Hi Klaus,

You might want to consider the Sangean 909 (Also sold under the Radio Shack label as a model DX-398) - which has both USB/LSB) capability.

I never had great reception luck with radios that simulated SSB with a clarifier.

A bunch of years ago we had an Irwin 27, and I was able to get an amazing amount of radio gear installed without intruding much into the limited living space (2 adults and 4 kids - on a 27' boat - makes for a VERY close family).
we had some custom cabinetry make that hung the radios in unused space.

Do you see signal at spectrogram and oscillogram?

If no, set your soundcard mixer settings as described in documentation.

If yes, just select desired signal in the top window and detector threshold in the bottom window
by mouse.

It is wrong !!!
You are need to test software _before_ purchasing it.

v>
v> done did that, besides, getting a string of cw characters and a couple
v> letters following the string. What am I doing wrong. vt.

Just select signal source in top window and detector threshold in the bottom window
(switching autothreshold off).

But take to attention that CW is NOT error-free mode.

CwGet can _help_ you, but it can not _replace_ human in CW decoding.

Just select signal source in top window and detector threshold in the bottom window (switching autothreshold off).

But take to attention that CW is NOT error-free mode.

CwGet can _help_ you, but it can not _replace_ human in CW decoding.

I am getting code characters with this program and it is not connected to a receiver. What sort of gimmick is that?
Hooked to the phone output on the receiver I get a nice green trace, a red line, and a series of characters in brackets with a couple letters following the brackets and then another string. Mean while the green trace is flowing across the screen. This is weird. Tuned in to a nice slow Tech spot on the band and the characters do not even have anything to do with the "keys" the hams are using. I copy the Techs fist but the string of characters are coming from someplace else in the universe. Pretty weird.

It means that you didn't read documentation.

CwGet just "decode" noise in this case.

Switch "Auto Threshold" button off and set detector threshold (horizontal red line in the bottom window)
some above noice level.

E> Hooked to the phone output on the receiver I get a nice green trace, a
E> red line, and a series of characters in brackets with a couple letters
E> following the brackets and then another string. Mean while the green trace

E> Tuned in to a nice slow Tech spot on the band and the characters do not
E> even have anything to do with the "keys" the hams are using. I copy the
E> Techs fist but the string of characters are coming from someplace else in the universe.
Pretty weird.

1. Select desired signal peak in the top window (vertical red line should point to it).
2. Select detector threshold in the bottom window above noice level but below signal maximum.

But read help-file completely at first!

Topic: 3486 Message: 3495

You will get random characters from noise. This is normal. Think of it like background noise in your headset.

To decode you MUST have a decent signal to noise ratio of the received CW signal to the noise level. Tune your rig for a normal sounding CW signal to your ears. Try using a narrow filter (I use the number 3 filter setting on my IC-746PRO). You will see a spike or pip. The spike should be jutting up somewhat higher than the reference noise level. If it is not then the signal is not strong enough to be decoded. Adjust your rigs volume control to adjust the height of the spike. You do not want it too high or to be under the noise level. Click on the spike. CWGet will lock onto the spike and start decoding. If the DX is working split (like the current N8S operation) then you should see good copy of who he is coming back to and their report. If the station is working simplex and many stations are calling on his TX freq CWGet may not accurately decode due to not being able to lock onto the desired CW signal due to other strong signals getting its attention.

CWGet works better with faster CW than slower. It works better with computer generated code or a electronic keyer than a hand key. It must compare the timing of dits to dahs to decode. A hand key varies this timing and throws off the decoding. Try listening to DXpeditions like N8S now ongoing. Tune in on their Tx signal and you will get short precise burst of CW when they answer stations calling them. You should copy something like this:
K7ACZ 5NN TU N8S UP.
You will see this over and over when they come back to different callers. CWGet is not perfect but it does what is expected of it. It will sit and decode good strong CW signals coming from N8S or other such stations all day long. Tune in a strong station sending CQ CONTEST during a contest and see how well it works then. Don't expect it to do a good job of Bubba in a conversation with Clem using a hand key at 10 WPM talking about catching catfish in the creek. The timing of the hand sent CW in a QSO like that varies too much

It reminds me of the old LORAN receivers I used to navigate with. With them you had two pips (signal spikes). You adjusted your set so the two pips were imposed over each other and then you read your LORAN line and went to your chart to get your LOP (Line of position). If you did not have good strong pips then you could not get a LOP.

I had to learn CW at 18 WPM as an airborne radio operator/navigator in the Coast Guard. I passed 20 WPM before an FCC engineer under the old testing system. But the 25 years around jet engines took out my high freq hearing so sometimes I can't hear the CW as good as my younger days. CWGet lets me read along with listening to fill in stuff I miss hearing.

Hello Eloise,

With all respect, I think you need to move back from "attack" mode in thinking CWGet is some kind of rip off. I have used several CW decode programs and CWGet is simply the best in my experience.

Does that mean I just plugged it in and got perfect code - not at all. And I don't get perfect code when I copy by hand either. It took a reading the documentation and try various settings and levels before I got it right.

It sounds like your concern is that you see characters when nothing is connected. Do you really think Sergei put a random character generator in the software? What you are seeing is noise. Maybe it comes from your sound card, maybe - though you don't have a mic connected to the computer, if it is a laptop, it might have a built in mic that is on.

There are thrushhold levels you you can set with controls so the signal has to be above the noise. There is a setting to specify the center of your cw sidetone passband. I an set my ArgoV at 700Hz and tune so the graph shows the signal at 700hz - then it is in the center of my rig's filters.

My point is - start slow. learn how to get your signal levels correct first. If you hear cw on you rig and expect to just plug it into the computer and immediately see clear text on the screen you will be disappointed.

But you will also be disappointed with any other CW decoding software you try if that is your expectation. There is definitely a learning curve to get levels correct for your particular rig and ocmputer. Once you focus on that - instead of "Why do I not see text? Is this a rip off?" - you will find this is a great program and if you do try any other software you might find - as many of us have - that CWGet was the best one in the first place.

Or - you can just accept your refund and stop using it.

73,
Paul

3499. suggestions for CW GET

Yahoo group: dxsoft
Date: 2007-04-07 14:45:53 UTC
From: k3eui@aol.com
Topic: 3499 Message: 3499

I have been watching the email go back and forth on this and would like to suggest something.

Is the problem with CW GET or is the problem with your radio/soundcard/computer connections?

Question
1. Does any digital program work with your receiver/transceiver and your computer?
If the answer is "yes" then the problem you are having is with the CW GET software.
But if the answer is "no" then the problem is likely with the sound card/computer/radio interface.

Suggestion: download some other (free) digital mode programs like Digipan, Hamscope, MMTTY.
You might just try Digipan or Hamscope (both free) which can copy psk (14.070 usb) and see if the computer sound card and the receiver/transceiver audio is set up properly. Or, get a copy of MMTTY (rtty free software) and try to copy standard rtty around 14.080-14.090 lsb.
Hamscope even does a fair job on CW.

Normally, to receive only, it is very very simple. You do not need any kind of interface.
It is the transmitting that gets tricky (where the Rigblasters help).

To receive:
Just hook up a shielded audio cable (need not be a stereo cable) between the audio out jack of the radio (I use the speaker jack)
and the input to the sound card (line input is preferred, but the mic input can work on a laptop if the audio isn't too strong).
If you use the MIC input, you must reduce the gain or volume since this is meant for a very low-voltage signal.
I put a Y-splitter on my speaker out jack of the radio and feed one side to my speaker, the other side to my sound card LINE input.

You MUST get into the Sound Card software on your computer and now set the controls properly.
Are you running Windows? Double click on the speaker icon on the bottom line.
That gets you to the sound control panel.... the key to getting everything working is here.
Every computer sound card is a bit different here.
Select ONLY the line input, or only the mic input (whichever you are using) and adjust the volume control on the software and on the radio as to NOT overload the sound card input.

Mute all other possible inputs.

If this setup works on ANY digital mode (psk, rtty, etc.) then you know the sound card and radio are working properly.

If you can decode any digital mode, like psk or rtty, using HAMSCOPE then just switch to CW GET software.
Folks are telling you that CW GET is not perfect copy unless the sender is also near-perfect copy. I agree.

Follow Sergei's instructions carefully in terms of the settings on CW GET.
A wrong settint will get you into trouble and endless frustration.
You can adjust the sensitivity (squelch) on the CW GET so that when no signal is coming from the radio, you get NOTHING on your screen.
It sounds a lot to me like NOISE is triggering your soundcard and CW GET to try to translate, or you have two sound card inputs open.

For what it is worth, I've been using
CW GET (receive) and CW TYPE (transmit) and both work 100% for me.
I have two radios, and the software works with both.

I can send CW with CW TYPE in either CW or USB mode (true CW or ACW)
with my radio and a Rigblaster interface for sending.
But I had to get both programs set up properly.

Be patient, and you'll get it to work.
There is no ripoff!!!!!

If you tell us where you live, maybe there is a local ham who can lend some help with the problem.

Every computer sound card is a bit different here.
Select ONLY the line input, or only the mic input (whichever you are using) and adjust the volume control on the software and on the radio as to NOT overload the sound card input.
Mute all other possible inputs.

If this setup works on ANY digital mode (psk, rtty, etc.) then you know the sound card and radio are working properly.

If you can decode any digital mode, like psk or rtty, using HAMSCOPE then just switch to CW GET software.
Folks are telling you that CW GET is not perfect copy unless the sender is also near-perfect copy. I agree.

Follow Sergei's instructions carefully in terms of the settings on CW GET.
A wrong settint will get you into trouble and endless frustration.
You can adjust the sensitivity (squelch) on the CW GET so that when no signal is coming from the radio, you get NOTHING on your screen.
It sounds a lot to me like NOISE is triggering your soundcard and CW GET to try to translate, or you have two sound card inputs open.

For what it is worth, I've been using
CW GET (receive) and CW TYPE (transmit) and both work 100% for me.
I have two radios, and the software works with both.

I can send CW with CW TYPE in either CW or USB mode (true CW or ACW) with my radio and a Rigblaster interface for sending.
But I had to get both programs set up properly.

Be patient, and you'll get it to work.
There is no ripoff!!!!!

If you tell us where you live, maybe there is a local ham who can lend some help with the problem.

From: Bill Aycock
Topic: 3486 Message: 3501

For the record- I downloaded cwget, read a little bit of the documentation (I intend to read more, later) and , by following the logical path, got very good copy, in a short time, without registering.

I intend to register later (not today, because the kids are giving me a party for my 80th birthday.)

Also for the record- I copied good text from good sending, and bad text from bad ending. My total time expenditure, download, install, read, adjust, copy and evaluate was less than an hour. In this time, I was able to judge that cwget is a fine program, designed to work with a variety of hardware and conditions, but needs some simple brain use on the part of the user.

I have not registered yet, but, if it is like most registrations, it will send you a code to put in, usually under the help menu. Did you guys try that?

Thanks, Sergei

vt.

When I started using it - and no, it didn't come together in 15 minutes - I'd forget to save my settings, etc. I'd push the wrong macro button (once I got that far into the rpogram), etc.

One thing that was kinda funny was I had been away from CW for decades, and didn't embrace it very much back in the mid 60's. So when I saw all those word fragments coming across I wondered what was wrong. Finally I realized there were at least three for four ways to send any word (Here, Hr, Vy, Vry, Very, for, fer, 4, etc.)

I'm guessing most of us in this newsgroup had to work through the setup with less than steller success the first time.

The suggestion to try one of the (other) digital modes is a good one because most of those (free) software packages give clear "over drive" warnings and the PSK31 signals are easier to determine if sound levels are set properly. That is, you elimenate the quality of the sending CW and are just working with signal levels. Once you get those signal levels from the rig into the computer set up, then you can start playing with the spectrum available in CWGet. You can see the effect of using various filters on your rig, how to tune so the cw signal is in the middle of your passband so your application of filters doesn't cut it out, and you can try various filters CWGet has to offer.

Don't give up.

Vic,
If I wasn't leaving for mexico in a couple of days I'd give you a call. Don't be shy to ask this newsgroup and take little steps at a time. Like what sound card you are using, what port you are plugged into and how are you taking audio off the rig. - what is the rig and computer anywhy.

I will to catch up on this newsgroup when I get back and hope to read about your eventual success.

3506. CwType 1.60 is released

Yahoo group: dxsoft
Date: 2007-04-15 08:45:47 UTC
From: Sergei Podstrigailo
Topic: 3506 Message: 3506

Hello All,

I just have uploaded CwType 1.60 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.60
A bug was fixed - PTT didn't work in "manipulation via OmniRig" mode
during sending from AALog or AAtest.
The ~[ab] macrosequence was made - to clear the input window and
switch TX, beacon and "pause" off.
V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.
V1.55
Some minor bugs were fixed.
V1.50
More convenient input window behavior was made.
"Ctrl/+" , "Ctrl/-", "Alt/+" , "Alt/-" keystrokes at main keyboard can be
used to change CW speed now.
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The "Tx at keyboard, if at least NN symbols are entered" option is made
in the MOX setup.
The ~[lf] macrosequence can be used to insert a new line (CR+LF) into
Input window now. It is transmitted just as space.

3507. question about how folks send CW with CW Type

Yahoo group: dxsoft
Date: 2007-04-15 12:32:28 UTC
From: k3eui@aol.com
Topic: 3507 Message: 3507

I am wondering how many hams are using CW Type to send CW
with the rig in USB or LSB mode (via keyed audio tones into the mic jack)
vs. sending CW by keying the KEY jack with the rig in CW mode.

I ask because I have a pending article in preparation for QST and wonder
how folks are using CW Type to send CW.

I realize that with the rig in CW mode, you also may have access to a
narrower filter
when receiving.

Thanks
Barry

Barry,

I use it to drive a FlexRadio SDR-1000, using virtual serial ports (VCom) to talk between cwType and the FlexRadio.

(So, I am in the CW mode only camp.)

I use CWType to key the rig. The keying circuit is easy to build and
can live within the Serial port plug shell. You can also find
commercially made serial port to rig key jack units for not much money.

You could "Y" in a regular key and have both worlds. I have tried
other programs and will stick with the CWType/CWGet pair. Someday they
maybe combined but they stack nicely on the LCD screen as now.

From: k3eui@aol.com
Topic: 3513 Message: 3513

Sergio:

I also recently registered CW GET with one computer in my shack and it works fine.

Can I also use the same registration code with a second computer in my shack on a second rig
or do I have to pay for two registered copies of CW Get?
Do I just cut and paste the registration code into the second computer's CW Get registration form?

Do we also need to register CW Type if we use that to SEND CW?
It seems to work fine now and I have not registered it yet.

Thanks

Barry

3514. What Setup/Intererface settings do I Use with CwType and the Ten-Tec Jupiter

Yahoo group: dxsoft
Date: 2007-04-29 18:24:10 UTC
From: Tom
Topic: 3514 Message: 3514

Do any of you use the CwType program from UA9OV and the Jupiter?

If so could I get the settings you are using in the "Setup/Interface" menu example the Key/PTT Port pin information and anything more that may help.

I know I can use the sound card on SSB but I would like the program to key the radio when in the CW mode so I can use my key for intermittent work.

I also recently registered CW GET with one computer in my shack and it works

fine.

Can I also use the same registration code with a second computer in my shack

on a second rig
or do I have to pay for two registered copies of CW Get?
Do I just cut and paste the registration code into the second computer's CW Get registration form?

Do we also need to register CW Type if we use that to SEND CW?
It seems to work fine now and I have not registered it yet.

Thanks

Barry

Speed is adjusted automatically.
You need to select desired signal in top window and detector threshold in the bottom window...

JM> Medium speed <(30 wpm), scrambles its brain.

3518. CW GET not working

Yahoo group: dxsoft
Date: 2007-05-01 00:05:56 UTC
From: k3eui@aol.com
Topic: 3518 Message: 3518

To Jim, KC8WCV:

I have used CW GET with two different rigs (icom and yaesu) and both work fine.

I use a Y-splitter on the speaker out jack of the rig and then use a shielded cable to go into
the line input (or on one laptop the mic input) of my computer (Dell laptop). The other side of the Y splitter goes to my external speaker.

If you go into the mic input of your computer you really have to reduce the voltage (audio gain) so as to not overdrive the sound card audio input.
Access the sound control panel and turn down the gain to LINE or MIC to almost nothing... just get enough signal, and no more.
I usually also MUTE all inputs except the one that I want.

There is a level control that you have to set on CW GET ... sort of like a squelch.
Watch the line that shows the signal coming in (lower screen) and click with the mouse a bit BELOW where the signal appears.
That is, set the threshold a bit below the signal level coming in to the sound card.

It ought to start translating the CW once you choose the right frequency in the upper window.
I usually try to set my receive line around 800 Hz (mouse control) and then tune my rig so the signal I want appears
around 800 Hz. The rest is auto.
Read the HELP files.

I don't know how well the program copies 30 wpm or higher.
I usually operate at around 20-25 wpm.

It copies almost as well as I can copy in my head (I don't write down anything).

I really like CW Type because I am more interested in sending CW with my keyboard
(rather than key or keyer) since my typing is far better (faster and more accurate) than my sending via keyer.

Sergei might have some specific suggestions for the software settings.
I try not to "mess around" too much with the software settings.

Does any other CW program work on your rig ..... like Hamscope?
Hamscope can also copy and send CW as well as psk and rtty.

Sounds to me like the problem is with the wiring between rig and sound card input, not with the CW GET settings.

Barry

3519. Re: What Setup/Intererface settings do I Use with CwType and the Ten-Tec Jupiter

Yahoo group: dxsoft
Date: 2007-05-01 02:00:29 UTC
From: Paul
Topic: 3514 Message: 3519

--- In dxsoft@yahoogroups.com, "Tom" <kn4jx@...> wrote:
>
> Do any of you use the CwType program from UA9OV and the Jupiter?
Tom,
The mention of the Jupiter is sort of irrelevant. Your main concern is the interaction with the software and your PC. The end result is, after you plug in a serial cable with the appropriate circuit to change the Serial signal to on/off dits and dahs, you have a phono plug (mono, stereo, 1/4 inch, 1/8 inch) at the other end of that cable that plugs into a rig - any rig.

The only concern at that point is that the "key" plug is compatible with the rig. For example, on the ArgoV, to key like a straight key, I needed a 1/8 stereo plug with the ring disconnected. I turn off the internal keyer and let the program do all the work.

So it does sort of matter that it's a Jupiter a little bit because rigs differ on how they take a straight key.

You can get involved with paddle configuration if you like - I didn't do it - but it is much simpler to consider the result as very good straight key sending.

73,
Paul

3520. CWType and RigRunner Problem

Yahoo group: dxsoft

From: Larry Mohr
Topic: 3520 Message: 3520

I'm using a West Mountain Radio Rigrunner/USB for CAT control of my IC-7000.

Can't get CWType to key the transmitter. Ham Radio Deluxe works fine to key by CAT on the USB/Com5 port. I've tried all the Setup selections with no luck.

Anyone else using the RigRunner sucessfully?

Thanks,

Larry

3524. AALog 2.47 & ADIF export/import?

Yahoo group: dxsoft
Date: 2007-05-04 12:39:55 UTC
From: Paul Shayler
Topic: 3524 Message: 3524

I exported my current log from AALog as a ADIF file. The idea was to import it in to a Pocket PC (WM5) for use in N0HR's excellent MobileLog2 program. When I tried to import the file, I got an error message. Just to check, I imported the file into Ham Radio Deluxe with no problems. If I then exported this loaded data, it would then import into MobileLog2 OK. Any ideas as to how to solve this problem.

Regards, Paul S.

There's a better way. This sort of behavior happens when a program doesn't have write access to the directory it's in. To fix that, right-click on the program short-cut, select Properties, go to the Security tab, and grant your username write permission.

3530. keying voltages and CW Type

Yahoo group: dxsoft
Date: 2007-05-13 11:58:40 UTC
From: k3eui@aol.com
Topic: 3530 Message: 3530

In a message dated 5/12/2007 11:36:07 PM Eastern Daylight Time, HAMWALT writes:

Ok--Thanks Barry! God bless, and Cheerio--73!--sure gonna try it when time rolls around.

OK Walt.

I use a Rigblaster Plus (or you can use a Rigblaster Pro) to key my Icom 725 rig in CW mode.
MFJ also makes one of these interfaces. You can also build one.

The serial port on the Rigblaster and computer uses the pin DTR that is set by the software (CW Type or Hamscope or MixW) to key the CW line.
The other serial port pin RTS I use to turn the transmitter on... the "push to talk" line.

Use a stereo 3 conductor shielded cable to connect the Rigblaster to the Drake CW jack.
Watch out which line you need to key.... tip or ring of the plug on the Drake transmitter.
If the rig has a built-in keyer (I don't think it does) you need to disable it since you'll be sending CW via your computer keyboard.

Check on the polarity of the keying voltage on your Drake at the CW key jack.
Newer rigs use a low-voltage positive signal you ground to send CW ... like 5 to 8 volts.
Older rigs (tube types) use a high negative bias voltage (-80 volts or more) that you key.
Be careful!!
Read the instructions on the Rigblaster and on the Drake before you hook this up.
You can also check with West Mountain Radio about keying an older Drake radio.
They are great on questions like this.

I found it much safer, and more convenient, to just hook up the audio out jack of my computer sound card
via a stereo cable to the Rigblaster, and then another shielded stereo cable from the Rigblaster to the mic input or data input
jack of my Radio. Again, West Mountain Radio has all kinds of cables for all the popular rigs.

I put my rig on LSB or USB (makes no difference) and work CW with my radio in SSB mode.
Less fuss... and the receiver doesn't know how I am sending CW.
Yes... it is legal. However, I can't use the narrow 500 Hz filter on receive, so this isn't so handy.

But CW GET will decode most decent signals.

Just don't overdrive the radio on transmit into ALC action. If you
overdrive you get distortion on the CW note.
Use the Sound Card output adjustment software to set the proper signal
voltage going into the mic or data jack.
The Rigblaster also has a potentiometer you can adjust by screwdriver.
And then the Drake probably has a mic gain control.
So you can set the proper audio signal by three independent ways.

I usually send CW that way at about half power ... 50 watts.
Since there is no "carrier" and only one sideband, it mimics a true CW signal
sent by the rig in CW mode
and keying an oscillator or buffer stage.

Good luck.
Let me know how it works out.
I'm a bit concerned about keying an older (tube type) rig with the higher
keying voltage.

for anyone with an icom 7000 I have uploaded the latest version of omni-rig to the groups file section this contains the commands for the latest rigs and should be unzipped to the hamport folder

3546. Tunneled CWType for Remote Op?

Yahoo group: dxsoft
Date: 2007-05-31 14:04:59 UTC
From: Zoli Pitman HA1AG
Topic: 3546 Message: 3546

Hello !

Anyone succesfully applied any virtual COM-port or LPT-port tunnelling software to CWType ???

I would like to use CWtype for remote controlled station.. Now I use CWtype on remote PC via UltraVNC.

Now the only reason for VNC is CWtype because I use Skype for audio and HRD for rig control.

tnx,

zoli ha1ag

Vista seams to only be good for new softwear 11

Listen on 80 to hear some of the VK and Zls talking about it.

Its not much better than XP unless your a Comercial user....Shops here
are recomending Don't Buy it if your happy with XP

The view is that Vista has opped out, and hasn't come up to XP
Standards for Home users

3559. MCW vs. CW

Yahoo group: dxsoft
Date: 2007-06-20 21:07:06 UTC
From: k3eui@aol.com
Topic: 3559 Message: 3559

To KC0QNB

As far as the sound card input is concerned, it should make no difference.
You are just feeding audio from a radio into the sound card LINE or MIC input.

In the radio itself:
CW needs a BFO (rig is in CW or SSB position) to hear the audio tones.
That is, on CW the carrier is turned on/off and so you need to "beat" that signal with an oscillator in the rig (called a BFO).
The result is audio on/off at a desired pitch.

MCW transmits a carrier along with audio tones (FM or AM) so you do NOT need a BFO but the sound coming
out the radio speaker jack or audio output jack will sound the same whether it is decoding CW or MCW (two meter repeater).
In MCW you cannot adjust the pitch of the audio tones. That is fixed at the transmitter.

But you have to adjust the audio frequency on CW GET to match the audio frequency
coming out of the receiver, whatever the repeater ID tone is set for.

It should work fine.
But it may take the CW GET program more than a few Morse letters to get the right speed.
And the ID on a repeater is rather brief, and usually at about 20 wpm.

Watch out that you don't feed too much audio into the sound card input .... avoid overload.
If you are using a laptop, with the input the MIC input, then you barely need any audio at all.
Reduce the sensitivity of the MIC or LINE input with the software control on Windows.

OH... do you get CW GET to work on (real) CW on the HF bands?
Start with that. If that works, then you know the audio levels and sound card are OK.

From: Ryan
Topic: 3560 Message: 3560

I have ran the CWget software, and it seems to work for the most part, but I haven't figured out the setup completely. The other day I tried to decode MCW from my 2m rig, and keyed the repeater nearby, cwget decoded the id but then I got a bunch of other stuff, even when the radio was quiet, I figured it was random noise that the software saw as cw, is there a way to reduce the sensitivity of the program to get only the signal not noise?, Also my buttons on the top of the window seem kind of overlapping but I cannot resize the window to make it wider, any ideas?

Switch "Auto threshold" off and set appropriate threshold level manually...

Why do you can not resize? Just drag for window border...

Thanks Sergei, Also I have a question about the bottom window, If I
click in it the fourth box from the left changes value from .004 on
with the red line on the bottom to 1.0 on the top, what setting would
suggest for general use?
I am trying to figure everything out so I don't have to bother anyone
again.

It is detector threshold value shown by horizontal red line.
You need to set this line some above noice level...

Hallo Antonio,

What you are raeding next is maybe a little guide to solve
your problem.
It is about Shipplotter......
==========
Hi Jan,

Vista is averse to programs saving stuff in the program files directory.
Create a directory somewhere less sensitive and then copy your charts
into that directory and then use Options..Directories..Chart files to
point SP to the new folder.

The same probably applies to log files.

Regards
Bev

From: legonedijk
Topic: 3566 Message: 3570

Hi Antonio,

The OS platforms for AALog 2.47 are: 9x/NT/Xp .
There is where your problem starts.
Find out if AALog 2.47 is in your "Program Files"
on your hard disk (C e.g.).
Make a new folder on your hard disk with a different
name like, e.g."Exaalog247" and transfer the AALog 2.47
program to this new folder.

I am not a HAM operator and not very handy with computers....

A second OS like Xp on your computer can be solve the problem
as well.

From: Kenneth Balfour
Topic: 3566 Message: 3571

Hi All,

AALog 2.47 does not work and will not work reliably under Windows Vista.
Its developer knows this and appears not to care about the woes of users
of AALog who have upgraded to Vista.

Because a release of AALog does not appear to be coming any time soon, the
solution is to "bite the bullet" and obtain a solution such as Prolog
which runs under Windows Vista. This program imports *.adi files, so
depending on how you work, all log entries from AALog would be intact.

Probably giving write permissions to "C:\Program Files\AALog" folder will help.
AALog use several wiles in Windows folder also, so write permissions
for files AALOG.INI and LOGINPUT.INI in a Window folder are necessary too.

l> A second OS like Xp on your computer can be solve the problem

Hmm, using Windos XP as a _single_ OS at computer is much better solution :-)

Really, WHY to broke working computer with Windows XP or Windows 2000 by installing
such strange system as Windows Vista ???

Hi Sergei e.a.,

If you buy a new computer in the Netherlands than
Vista is on the hard-disk.
We have to deal with that and make the best out
of it.

Your explanation about permissions for the .INI files
are usefull for those who know how to fix that.
A manual in plane text for those who did not have the
knowledge is welcome.

Hi legonedijk
Hi Sergei
I bought a new computer from Dell and have insisted that they they replace Vista with XP. They agreed and sent the disks. I have no need of an OS that uses 18 times the memory to produce graphics for which I have no use. If enough people do this, some sort of message may get back to mighty microsoft.
regards malcolm

Yahoo group: dxsoft
Date: 2007-07-15 09:44:02 UTC
From: dave
Topic: 3576 Message: 3576

The problem seems to continue and no one seems to have a solution to it other than the suggestion that we all go back to XP.
WHY? should we have to? other programs such as dx keeper win eqf, hamradio deluxe can all supply their programmes to work under Vista so why can't we get a version of aalog updated to do the same?????
After all its supposed to integrate with the rest of the digital mode programmes and they can all work under vista.

Vista causes lots of problems, not just for radio amateurs! That is why
many companies out there in the Business world want to delay changing
for as long as they can. As they say "Beauty is skin deep" in the case
of Vista, there are lots of nasty things under the skin!

Dear Alexander,

How to install 3.0 over 2.47? Do I just install or do I save all logs first
in another folder Then copy them into 3.0?

Where do I get 3.0?

Best Regards
Dan Schaaf

Hi, Alexander,

1)
The capacity of modern computers let us store a huge quantity of info.
Publish the rules and we shall preapare database for awards we would
like to track.
Everyone has its own favorite award and can find time to prepare
the needed list (database) which can be included (added) to AAlog.
Why the program is restricted only to several awards?
A lot of people cannot track their favorite award and this is
the main drawback of the program.

2)
What is the main difference of 3.0 and 2.47?
Where can one find the list of new possibilities?

Hello Vasilii,

Tuesday, July 17, 2007 , you wrote to me:

VM> Hi, Alexander,

VM> 1)
VM> The capacity of modern computers let us store a huge quantity of info.
sure but if prepare VERY long list (like ALL grids) long delay is
possible before displaing.

VM> Publish the rules and we shall preapare database for awards we would
VM> like to track.
VM> Everyone has its own favorite award and can find time to prepare
VM> the needed list (database) which can be included (added) to AAlog.
VM> Why the program is restricted only to several awards?
VM> A lot of people cannot track their favorite award and this is
VM> the main drawback of the program.

here is example for Polska award

```
======================
"B","B","Lubuskie","0"
"C","C","Lodzkie","0"
"D","D","Dolnoslskie","0"
"F","F","Pomorskie","0"
"G","G","Slskie","0"
"J","J","Warminsko-mazurskie","0"
"K","K","Podkarpackie","0"
"L","L","Lubelskie","0"
"M","M","Malopolskie","0"
"O","O","Podlaskie","0"
"P","P","Kujawsko-pomorskie","0"
"R","R","Mazowieckie","0"
"S","S","Swietokrzyskie","0"
"U","U","Opolskie","0"
"W","W","Wielkopolskie","0"
"Z","Z","Zachodnio-pomorskie","0"
======================
1st column - key for search
2nd - how it will displayin awards manager list
3rd - reference name
4th - "1" if deleted entry,'0' otherwise
```

before create list please contact me. I have long list of awards
prepared.

VM> 2)
VM> What is the main difference of 3.0 and 2.47?
VM> Where can one find the list of new possibilities?

The main difference is another database engine. Some changes in the
interface. Better integration with truetty/cwtype/AAvoice

Best regards,
Alexander mailto:aia@...

3599. AALOG3 AND VISTA

Yahoo group: dxsoft
Date: 2007-07-20 18:46:25 UTC
From: dave
Topic: 3599 Message: 3599

Hi Alexander,
installed aalog 3 on computer today and it appears to be stable on my machine running vista premium 32bit version.
I then configured truetty to run under aalog 3 but had to use the manual link setup under the options selection if you configure the link manually truetty works flawlessly through aalog 3.
I have had one problem so far,I cannot get onmi rig to integrate with aalog.i tried loading hamport but it would not open under vista, so I downloaded the latest version of omnirig from the net and tried that but so far the furthest i have managed to get the program to progress is entering all the setup parameters for my ft 920.
once these have been entered you can call up omnirig from the run command but it keeps on returning back to the setup screen and not the frequency read out box.
have you any thoughts as to this problem ? any ideas would be of help.
regards
Dave gm6jua

3606. RTTY operation with TrueTTY, AALog andBandmaster

Yahoo group: dxsoft
Date: 2007-08-04 22:32:59 UTC
From: oceanbiz01
Topic: 3606 Message: 3606

Who can help me with this:

When I mouse click on a cluster spot in Bandmaster, my FT-920 (USB Mode) is CAT Tuned to the spot freq (DX1DX at 14.090 as example). VFO freq display now says 14.090. Now, in the TrueTTY Spectrogram, where should my 2 cursors be located in the spectrogram? Centered near 1000 Hz? Centered near 2200 HZ ? Near 1500 HZ?

This is important for 2 reasons: 1) contesting to make sure that I don't waste valuable time tuning up and down the spectrogram trying to find DX1DX who is transmitting. 2) so I don't have to mentally add AFSK offset to the VFO frequency.

Thanks,
73
Dan K3ZXL

SeaTTY is excellent for decoding the NAVTEX broadcasts on 518Khz and 490Khz There is a worldwide network of broadcast stations, see
http://www.dxinfocentre.com/navtex.htm

3621. CWGET and Bugs

Yahoo group: dxsoft
Date: 2007-09-17 15:53:54 UTC
From: eddieking88
Topic: 3621 Message: 3621

First this is not a complaint, but just an observation. my short term memory has got up and went. So I rely on CWGET when I can't write or type fast enough to confirm what I thought I copyed. I can copy 35-40 in my head. but when a bug operator gets on most of them send dashes at 15 WPM and dots at 35 - 40 and I can copy them BUT NO cw copy program can. a lot of NNQ's or NNMA's and even NNTTA's ECT. I hope you get the picture. I am not alone in this observation.
I think all cw ops should record their fist and listen to it. ("but they won't") They think their "swing" is great

ED K8OT

P.S I ain't gonna give up CW no way.

3622. TrueTTY mode suggestion

Yahoo group: dxsoft
Date: 2007-09-17 21:16:13 UTC
From: sholtofish
Topic: 3622 Message: 3622

Hello all,

I was thinking that it would be good to have the PSK-10 mode in TrueTTY in the future?

I have found that when PSK-31 gets too rough to copy, dropping down to PSK-10 (e.g., in MultiPSK) can make all the difference. What was 50% copy in PSK31 is 95% in PSK10. It is still fast enough for a decent QSO too.

73 Sholto KE7HPV.

PS. I am talking about 'PSK10' *NOT* the very slow 'PSKAM10'

3623. CWGET and Bugs

Yahoo group: dxsoft
Date: 2007-09-17 21:31:42 UTC
From: k3eui@aol.com
Topic: 3621 Message: 3623

I find the same thing happening even at 15 wpm with CW GET.
Lousy code is lousy code...

If the CW is sent by a program (keyboard) or electronic keyer, then I find the copy on CW GET is fantastic.
It doesn't work too well on a straight key unless the operator is very good.

I also copy mostly in my head.

None of the other automated CW copy programs seem to do any better with poor code.

Barry

k3eui (operator since 1958)

Sergei

3626. Re: [dxsoft] TrueTTY mode suggestion

Yahoo group: dxsoft
Date: 2007-09-19 15:16:00 UTC
From: Sholto Fisher
Topic: 3622 Message: 3626

Hi Segei,

Here is my list of modes that I currently use (and hear too) which are not yet in TrueTTY:

1. Olivia. Most activity seems to be in the following format;
1000Hz 32 tones,
500Hz 16 tones,
500Hz 8 tones,
250Hz 8 tones.

2. DominoEX 4,5,8,11,17,22 baud with or without FEC.

3. Hellschreiber. Mainly Feld-Hell but also FM Hell at 105 baud.

4. PSK-10. Because of it's -17.5dB s/n capability. It is not very common to hear but when people discover how good it is it becomes a favorite! There are people who use it on 10.140MHz when conditions are poor.

I think this is all the modes really used these days (in addition to the ones already in TrueTTY). The only other mode I hear from time to time is Throb/Throb-x but it is not used very much.

This information about PSK10 is from MultiPSK:

Created by: Patrick Lindecker F6CTE (2001)

Description :
Baud rate : 10
Speed : 18 wpm
Modulation : DBPSK
Reception mode: indifferent (LSB or USB)

Character set : 56 "Varicode" characters " A..Z 0..9 <CR> <ESPACE> . , "
: - = + ? $ ' ( ) ! / @ & # * with a backspace character and an idle character (displayed by ">").

Small characters are transformed in capital characters and special characters as
" i " are transformed in standard capital (in the example above: " E ").

Shape of pulse : rectangular but the transition between 2 successive different bits is done by a decreasing sine then by an increasing sine (each one during a quarter of period)

Bandwidth : about 40 Hz

Demodulation : coherent,
Synchronization: automatic using the signal
Correction code: no
Convolution code: no

Interleaving : no
Repetition : no

Drift tolerance : 40 Hz/mn (depending on signal-to-noise ratio)
Pmean/Ppeak : 0.86
Lowest S/N : -17.5 dB

For precise specifications about PSK10, see the PSK10.DOC file.

From: fbarnhouse
Topic: 3621 Message: 3627

Yes, I agree with you, and for substantially the same reasons. CWGet can be used as a crutch for those of us with non-automated (legacy) memories, but if it becomes too useful, some ops (like myself) could be in real trouble some future field day wotking a remote site. No, I don't have a solution.

3628. SeaTTY 1.74 beta is published

Yahoo group: dxsoft
Date: 2007-09-21 16:18:37 UTC
From: Sergei Podstrigailo
Topic: 3628 Message: 3628

Hello All,

I just have uploaded SeaTTY 1.74 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

--
Best regards,
Sergei

==========

SeaTTY versions history

V1.74
The "Shift" menu can be used to select normal deviation (800 Hz)
or narrow deviation (300 Hz) in HF-FAX mode now. Narrow
deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
V1.70
Minor improvements of raw log files handling were made.
V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
[...]

3629. SV: [dxsoft] SeaTTY 1.74 beta is published

Date: 2007-09-21 17:55:16 UTC
From: Mats Höwing
Topic: 3628 Message: 3629

Hello,

I was looking forward to a new SeaTTy release. I have earlier proposed some update changes. I understand from the note below that none has been implemented.

Do you have any plans for introduce some of it?

Best regards /Mats Höwing

Sergei

==========

SeaTTY versions history

V1.74
The "Shift" menu can be used to select normal deviation (800 Hz) or narrow deviation (300 Hz) in HF-FAX mode now. Narrow deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
V1.70
Minor improvements of raw log files handling were made.

V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
[...]

Ok thanks for the information. The ID filtering is the most wanted feature.
soo great news.

I will sail over the weekend and I will of course install 1.74 even if the
usage will be limited to Navtex receptions.

See you!

/Mats

3633. Re: [dxsoft] TrueTTY mode suggestion

Yahoo group: dxsoft
Date: 2007-09-26 17:23:15 UTC
From: Sholto Fisher
Topic: 3622 Message: 3633

Hi Sergei,

I had another thought about a really useful mode to add in TrueTTY.

If it was possible to implement the PSK ARQ (PSK-mail) mode as described on http://pskmail.wikispaces.com/PSK_arq

It is adapted for PSK from the protocol http://sharon.esrac.ele.tue.nl/pub/linux/ham/pskmail/ARQ2.pdf

Currently it is only available on Linux (uses FLDIGI) and uses PSK speeds up to 250 baud.

I know there are many Windows users who would like to try this mode but they are not familiar with Linux.

I am sure if you incorporated this into TrueTTY you would sell a lot of copies!

3634. Problem With Vista, TrueTTY, RIGblaster Pro and FSK

Yahoo group: dxsoft
Date: 2007-09-28 01:34:10 UTC
From: David Buell
Topic: 3634 Message: 3634

I've been reading a lot here about problems with Vista and I'm having problems with TrueTTY.

My set up is:

Computer: HP Pavilion dv2145
OS: Vista Home Premium
COM1: Prolific USB to Serial Com Port (supposedly Vista compliant)
COM2: USB Serial Port
Interface: RIGblaster with FSK keying

Setup For TrueTTY: PTT Pin - RTS, Produce FSK output at TxD

When I try to use COM2 as the port, I receive a number of Set ComState errors and TrueTY will not key the PTT or the FSK
When I use COM1 as the port, TrueTTY takes a LONG time to start and when it is running it keys PTT and FSK, but the FSK stutters and sends malformed FSK data at rig.
Either COM port works fine many other apps,includng rig control and CWType, both through RIGblaster.

Anyone had any success with a similar setup?

David

Most USB/COM converters doesn't support speed below 300 Bauds, so
they are can not be used for FSK keying.

3638. SeaTTY 1.75 beta is published

Yahoo group: dxsoft
Date: 2007-10-03 15:16:36 UTC
From: Sergei Podstrigailo
Topic: 3638 Message: 3638

Hello All,

I just have uploaded SeaTTY 1.75 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

The "Setup" menu was rewritten.

Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.

Mask for ID filter can include wildcards,
"?" means "any symbol",
"#" means "any digit".

That is "I???" mask means "any ID, starting from I",
"AB##" mask means "any ID starting from AB and ending by two digits".

Your feedbacks are very welcome!

3644. SV: [dxsoft] SeaTTY 1.75 beta is published

Yahoo group: dxsoft
Date: 2007-10-04 20:40:49 UTC
From: Mats Höwing
Topic: 3638 Message: 3644

Sergei,

I have now installed and made a test run onboard my □ship□.

It works fine!

But maybe for my NAVTEX use the filtering is made with some overkill.

I need just to filter on the first letter (station ID) and maybe the second
letter (type of message). The following 2 digit number is just order of that
kind of message and there is no need to filter that part at all . I□m
referring to NAVTEX use now, regarding RTTY I have no idea, maybe there is
use for it there

However, with the filtering that now I available it is a great improvement
for SeaTTY. During one day (24h) I usually receive about 50 to100 messages
and there is not always time to go through all to find the one that I need.
This is really a good improvement that I have been missing!

Testing will continue!

Regarding the naming of the message files, I wish that you create filenames
as following example or similar:

Message example:

ZCZC LA26

221931 UTC SEP 07

NORWEGIAN NAV. WARNING 388/2007

CHART 16

AREA STAVANGER

PANNEVIGODDEN LIGHT 58-57.7N 005-46.2E IS UNLIT.

NNNN

Todays SeaTTY filename: 070923-061955

My opinion how the message should be stored with filename: LA26 221931SEP07

Then I can quickly see that this is a navigational warning sent out from
Norway, time and date etc..

Note that the data for the message origin is not the same as the when the
message was transmitted/received.

Every message can and are in fact sent out several times, with this naming strategy he message should be stored just once.

What do you say about this?

Another idea is just to ad the 4 letter/numbers to you current file name like: 080923-061955 LA26

That should give a good improvement as well. And maybe simpler for you ..

Another question.

I have a brandnew NAVTEX manual from IMO, International Maritime Organisation. Do you have it? Of you need it just tell me and I will send it over

Best regards

/Mats Höwing, Sweden

MH> What do you say about this?

In really NAVTEX and especially RTTY are NOT error-free modes.
So the same messages are not always identical at receiver end...

MH> Another idea is just to ad the 4 letter/numbers to you current file name
MH> like: 080923-061955 LA26

MH> That should give a good improvement as well. And maybe simpler for you?..

At least it will be compatible with old files ...

MH> Another question.

MH> I have a brandnew NAVTEX manual from IMO, International Maritime
MH> Organisation. Do you have it?

No, I haven't .

MH> Of you need it just tell me and I will send it

May be filter for "Message ID" will be useful too ?

I mean first six symbol of second string of message.

From: Henrik Thiil Nielsen
Topic: 3638 Message: 3647

>>> "My opinion how the message should be stored with filename: LA26 221931SEP07.Another idea is just to ad the 4 letter/numbers to you current file name like: 080923-061955 LA26.Every message can and are in fact sent out several times, with this naming strategy he message should be stored just once."

Mats, of course the changes you suggest could be implemented as an option alongside the present file naming scheme, but it certainly wouldn't be a good idea just to change the file naming scheme to the one you suggest. This is why:

I could be wrong, but I think ships of the size that are required to have NAVTEX receivers onboard use dedicated NAVTEX receiver/printers, so chances are the vast majority of SeaTTY users are DX'ers. SeaTTY is easily the best software decoder for NAVTEX DX'ing, and NAVTEX DX'ers most certainly do not want any messages to be "stored just once". That would make SeaTTY pretty well useless to us. And besides we may well receive messages from three, four or more different stations with the same identifying letter (time slot). Thus "L" in the above example could stand for Rogaland, Limnos, Hong Kong etc. To a DX'er the timestamp of the original message matters little, what is important is the actual TX/RX time.

In fact if the current file naming scheme were to be changed in any way I would suggest that the time of reception of the last line in the message was used in the file name instead of the time of the beginning of the following message. This is because where a proper "NNNN" (or at least three intact Ns) isn't received, the message does not seem to get saved as a file until the next "ZCZC" (or at least three of the characters) is received. If you receive a message with no "NNNN" at, say, 1507 UTC, and then receive the next message at 1531 UTC, your 1507 message will be saved as 1531. Obviously this isn't ideal, but then DX'ers use the raw log and select the option to have every line in it time stamped, so the change I am suggesting is in the "nice to have" rather than the "must have" category.

I have another suggestion: I have noted that one of Sergei's "competitors" has created a web site to which users of his NAVTEX decoding software can upload the messages they decode. It would be very nice to have such a web site for SeaTTY, but I realize this would be quite a project.

Sergei, thank you for providing such excellent software at a very reasonable price!

Sergei,

I have read you r comment to my proposal and also the ones from Henrik Thiel.

1) I understand the my first proposal for file naming was not popular.
I am not a radio amateur or similar. I am a sailor and using th e SeaTTY as a pure NAVTEX receiver and also for weather fax even if I hav not been luckey there yet. So Ihop tha I am excused to not fully understand the requirenmtn from the larger group of your customers. Soo, I still would like to see the massage ID in the file name, like: 080923-061955 LA26. Could this work for the DX□ing guys as well?

2) You wrote: May be filter for "Message ID" will be useful too ?

I mean first six symbol of second string of message. I dont understand really:

3)

4)

3649. SV: SV: [dxsoft] SeaTTY 1.75 beta is published

Yahoo group: dxsoft
Date: 2007-10-07 19:56:33 UTC
From: Mats Höwing
Topic: 3638 Message: 3649

Sergei,

I have read you r comment to my proposal and also the ones from Henrik Thiel.

I understand the my first proposal for file naming was not popular. I am not a radio amateur or similar. I am a sailor and using the SeaTTY as a pure NAVTEX receiver togetherr with the navigation compute which I have built. I also also tryed weather fax even if I hav not been luckey there yet. I am also an electronic engineer with a large interest for electronics genrally. So I hope that I am excused to not fully understand the requirement from the larger group of your customers.

Soo, I still would like to see the massage ID in the file name, like: 080923-061955 LA26. Could this work for the DX☐ing guys as well?

You wrote something about filtering the message ID. I did☐nt get that really.. mess example:

ZCZC JA77

120640 UTC JUL

KALININGRAD NAV WARN 117

SE BALTIC.

SHIPS EXERCISES 130300-151800 JUL

IN AREA BR-65 CENTERED IN 55-10N 019-25E

AREA TEMP DANGEROUS TO SHIPPING.

CANCEL THIS MESSAGE 151900 JUL.

NNNN

The ☐six characters☐, do you mean the ☐120640☐ ? If soo, my answer is no. see below:

- The message ID is the ☐JA77☐according to the NAVTEX manual. And that´s what I wouldlike to see in the filename. JA77 means: J = transmitter Gislövshamamr in Sweden, A=Navigational warning. 77 = number 77 in order this year..

- ☐120640 UTC JUL☐ means that the origin for this message is date: July 12 and time: 0640 UTC

Forget about what I wrote regarding storing just once. That□s how real navtex receivers do (not storing but printing on paper). I can defenatelly live with having the same message stored every time it is sent. One reason to do so is that the quality of reception is varying, as you know.

I have also sent the NAVTEX manual to the mail address seen on the □help□ menu in SeaTTY.

And by the way: Thankyou for youR excellent product to that reasonable sum of money!

/Mats

You see, "Station ID" is just a number there, but type of message is probably
encoded at second string...

MH> I have also sent the NAVTEX manual to the mail address seen on the ?help?
MH> menu in SeaTTY.

I got it, thanks a lot!

MH> And by the way: Thankyou for youR excellent product to that reasonable sum
MH> of money!

Thanks again!

The main reason why I can not to implement _all_ suggestions from _all_ user is
to keep the program simple for using.

It is not a problem to do a lot of "bell and whistles", which only author of software can
use.

The problem is to implement all _useful_ features but to keep a program simple...

3653. SV: SV: SV: [dxsoft] SeaTTY 1.75 beta is published

Yahoo group: dxsoft
Date: 2007-10-08 16:16:11 UTC
From: Mats Höwing
Topic: 3638 Message: 3653

Hello Sergei,

Like you say. I have during this conversation noticed that the more features you put in the more difficult it will be to use. For example the filtering you have included now needs also to be supported well in the help menu (don☐t remove it thought!!!!)

I also understand that the different need for NAVTEX, RTTY, etc complicates as well

Last question:

File naming like: ☐080923-061955 LA26☐ for NAVTEX messages

Is that out of the question?

Best regards

Mats

Jerry,

Frequency is 518 kHz

I□m using an old reciever unit that i□ve picked from an old Standard Radio
Navtex reciever/printer (from approx 1980, type PNW 20).

I guess an world recievr could be used as well (correct, Sergei?)

My receiver is buildt for the Navtex freq only (518 kc), so I never need to
tune it.

Antenna is an active antenna from NASA-Marine for about 30 USD

I had some EMC issues with radiation from the Computer into the antenna
cable at first. A ferrite at both ends at the cable cured this.

Hope I answered some of your questions.

/Mats

CW ID is generated by sound card, so it is not sent via FSK output.

3662. SeaTTY 1.76 beta is published

Yahoo group: dxsoft
Date: 2007-10-11 11:20:46 UTC
From: Sergei Podstrigailo
Topic: 3662 Message: 3662

Hello All,

I just have uploaded SeaTTY 1.76 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

Station ID's of RTTY and NAVTEX messages are included in message filenames and are shown in the message tree now.

There are examples of filenames with ID:

071010-213818-KA57.TXT
071011-180001-794_.TXT

Old filename convention is supported also.

--
Best regards,
Sergei

==========

SeaTTY versions history

V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.
V1.74
The "Shift" menu can be used to select normal deviation (800 Hz)
or narrow deviation (300 Hz) in HF-FAX mode now. Narrow
deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
[...]

From: Mats Höwing
Topic: 3638 Message: 3671

518kHz!!!!! Should work with a good world radio type, I guess.

Maybe the ☐real☐ Radio experts on this forum could help you here; What receiver is needed for Navtex reception?

How to use a ☐world radio☐`?

/Mats

Mats,

Thanks, I guess that a NAVTEX RECORDER is required. Yes, I knew 516 kHz, but never heard anything. I believe there is another frequency in the 4++ kHz range?

Appreciate the help,
Jerry

It works with a good world radio, yes. I use a very old Sony. The problem is to avoid interference from other equipment, including your computer power supply.

http://www.gmdss.com.au/navtex.htm

It works ok with my Sony icf-SW7600G en Degen/Kaito DE1103.
Both with SSB facility.
It all depends on your antenna and the distance.
Those NAVTEX messages are short.

Ämne: [dxsoft] SeaTTY 1.76 beta is published

Hello All,

I just have uploaded SeaTTY 1.76 beta to the main site and mirror:

http://www.dxsoft. <http://www.dxsoft.com/seattyb.zip> com/seattyb.zip
http://www.hamport. <http://www.hamport.com/seattyb.zip> com/seattyb.zip

Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.

There are examples of filenames with ID:

071010-213818-KA57.TXT
071011-180001-794_.TXT

Old filename convention is supported also.

--
Best regards,
Sergei

==========

SeaTTY versions history

V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.
V1.74

The "Shift" menu can be used to select normal deviation (800 Hz)
or narrow deviation (300 Hz) in HF-FAX mode now. Narrow
deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.

If you see only very slant lines (almost horizontal) it means that your sound
card sampling frequency is too far from nominal one.

Just make slant correction ("<-/\->" button) along these lines.

3686. SeaTTY and fax

Yahoo group: dxsoft
Date: 2007-10-21 18:45:58 UTC
From: Jim Shaffer, Jr.
Topic: 3686 Message: 3686

I'm still having trouble getting SeaTTY to detect the end of a fax transmission properly. I've tried tuning to the exact frequency of the black tone and the exact frequency of the white tone, and neither produces a recognized stop tone unless I have an almost perfectly noise-free signal, which is rare. Does anyone know what I might be overlooking? Or if this is a common problem, I would like to see a user-settable timeout period after which a fax picture would be closed and saved. Otherwise, trying to do automated recording of fax stations produces much wasted disk space and files with out-of-sync images separated by noise.

3687. Re: SeaTTY and fax

I am using the auto-mode. It detects the start signal on any
transmission clear enough to read, but it often fails to detect the
stop signal unless the transmission is almost perfect.

~~~~~~~~~~~~~~~~~~~~~~~
I have found that if you move the left signal bar on the
the oscilliscope on top of the screen slightly to the right be-
tween two highest levels, it will detect the stop signal.
Try it out, it works almost always for provided the signals
are not too weak.

3692. TrueTTY tune option

Yahoo group: dxsoft
Date: 2007-10-24 15:04:26 UTC
From: Sholto Fisher
Topic: 3692 Message: 3692

Hello Sergei,

Would it be possible in the future to have a button on the menu bar which will just send a continuous tone at the TX frequency for tuning purposes?

Sending an idle with [tn] is OK but I would prefer to use a single tone so I can adjust my rig for peak power output first.

It should be a toggle button I think - click for TX Tune on, click again for TX Tune off.

Having the ability to quickly turn it off could be very useful too!

73 Sholto KE7HPV.

As workaround can suggest to enable "Setup/Interface/Continuous carrier while idle" option
and start TX in RTTY mode...

3694. FW: Error in AAVoice on new machine on new machine

Yahoo group: dxsoft
Date: 2007-10-24 22:34:36 UTC
From: Louis Sica, Jr.
Topic: 3694 Message: 3694

Hello Group

I've just installed AAVoice on a new machine. When I launch the program, I get the following error:

List index out of bounds (1)

After this the program does launch, but none of my Macros appear on the macro buttons, and the program does not function properly. Any of the macro buttons give a "Cannot assign a nil to a TListBoxStrings" error. Pressing the "Mic" button gives an "Access violation at address 00479635 in module 'AAVoice.exe'. Read of address 00000000" error.

When I try to exit the program, I get an error "Access violation at address 004778C4 in module 'AAVoice.exe'. Read of address 00000000" error, and the program will only exit when forced to do so from Task Manager.

My system configuration:

Operating System: Windows XP Home 2002, Service Pack 2
CPU: Athlon 64 X2 Dual Core 5200+
Memory: 4 GB (Windows sees 3.5 GB, as expected, known "XP and 4 GB Systems" bug)
-----> side note here: Windows Sound Recorder gets a "Not Enough Memory" error on machines with more then 2GB RAM. Is this AAVoice error possibly related?
Sound card: Onboard Realtek ALC883 CODEC Chip
Sound Driver: Realtek Semiconductor Version 5.10.0.5449 (Never Again will I use the Microsoft drivers for onboard Realtek sound after they messed up the AC87 driver. Always a manufacturer driver only) . Note that this driver installs the input and output of the sound device as *two seperate devices*.

Note also that TrueTTY, CWGet, CWType, and Even SeaTTY all work fine on this configuration without errors . Since these programs are actually able to select a particular sound device and AAVoice isn't, I'm wondering if this is my issue.

Any help would be appreciated

Lou Sica

From: lou_sica
Topic: 3694 Message: 3696

Hello Alex

Does it have to do with the fact that the driver considers the input
and the output as 2 seperate devices? If the problem has to do with
that, maybe you could add the ability to choose a particular sound card
to work with in AAVoice while you "have the hood of the car open" and
are fixing the problem? (Humbly requested :))

3697. Error in AAVoice on new machine on new machine

Yahoo group: dxsoft
Date: 2007-10-24 02:56:54 UTC
From: Louis Sica, Jr.
Topic: 3697 Message: 3697

Hello Group

I've just installed AAVoice on a new machine. When I launch the program, I get the following error:

List index out of bounds (1)

After this the program does launch, but none of my Macros appear on the macro buttons, and the program does not function properly. Any of the macro buttons give a "Cannot assign a nil to a TListBoxStrings" error. Pressing the "Mic" button gives an "Access violation at address 00479635 in module 'AAVoice.exe'. Read of address 00000000" error.

When I try to exit the program, I get an error "Access violation at address 004778C4 in module 'AAVoice.exe'. Read of address 00000000" error, and the program will only exit when forced to do so from Task Manager.

My system configuration:

Operating System: Windows XP Home 2002, Service Pack 2
CPU: Athlon 64 X2 Dual Core 5200+
Memory: 4 GB (Windows sees 3.5 GB, as expected, known "XP and 4 GB Systems" bug)
-----> side note here: Windows Sound Recorder gets a "Not Enough Memory" error on machines with more then 2GB RAM. Is this AAVoice error possibly related?
Sound card: Onboard Realtek ALC883 CODEC Chip
Sound Driver: Realtek Semiconductor Version 5.10.0.5449 (Never Again will I use the Microsoft drivers for onboard Realtek sound after they messed up the AC87 driver. Always a manufacturer driver only)

Note also that TrueTTY, CWGet, CWType, and Even SeaTTY all work fine on this configuration without errors

Any help would be appreciated

Lou Sica

As new member I was wanting to know a few things. I plan to do more on CW, PSK and RTTY with my Icom 706 and maybe control it by computer. I really don' t know where to start, I do a lot of CW at this time on some of the net and like to use a computer monitor when out of the shack ot see what is going on and use a shareware program called CwGET seems to work just fine, was wondering if the one the you purchase has more features to it or just what? Well any ideas that anyone can send to me will be appreciated very much. Live here in the hills of Eastern KY, place called Louisa.

3699. AALog labels

Yahoo group: dxsoft
Date: 2007-11-01 02:46:24 UTC
From: Norman Wald
Topic: 3699 Message: 3699

I am completely confused about how to make QSL and address labels in AALog. When I print selected records I only get a minimum of info on the label, and the word BAN shows for the frequency in MHZ. Can't modify the form, can't change fonts, or size, or add Pse or Tnx QSL. On line help seems to be missing. Any one have success with labels in AALog?

3701. CWGET with Vista,

Yahoo group: dxsoft
Date: 2007-11-02 20:28:50 UTC
From: John
Topic: 3701 Message: 3701

Hello everyone, and thanks for being here and reading this. I have a problem with CWGET. It woun't hear CQ100 in the cw mode. When i plug the mike in, it hears my words and writes different letters. which is understandable. But it won't copy the cw on the cq100. When i unplug the mike and try to open CWGET, it tells me there is "no sound input devise" So there has to be a tie with the microphone somehow. And help would be great. email me klokis@... or we can talk on CQ100. thanks greatly, john kb3hqh

Do you try to use the same sound card by two programs (CwGet and CQ100) simultaneously ?

You must clear understand what you do in this case.

Obvious way is to use _two_ soundcards (one for CQ100 and second for CwGet), connected by audio cables.

3703. Receiving Navtex with SeaTTY

Yahoo group: dxsoft
Date: 2007-11-05 12:23:31 UTC
From: bhcmadison
Topic: 3703 Message: 3703

I have had pretty good luck receiving Fax using the SeaTTY software, but no luck receiving NAVTEX. On the boat I am about 120 miles from the NAVTEX transmitter (Solomons, MD to Portsmouth, VA) so should be able to receive the signal.

I am using the Sangean ATS 909 radio and have used their portable wind-up antenna which is about 20' or so. I have also wrapped a wire around the radio antenna and around a wire mast stay on my sailboat. Neither approach has brought in the NAVTEX signal which registers around 5-7 on the 10 scale of the radio.

Can anyone recommend a simple antenna arrangement that would improve reception?

Other than dialing 1.9Mhz below and using USB, are there some tuning tricks I am missing?

Thanks, Bruce

Too big sampling frequency error of soundcard can affect NAVTEX decoder.
But if you receive FAX successful, you probably already did slant correction,
which corrects sampling frequency error...

From: Chris
Topic: 3703 Message: 3706

Bruce,

The 20 feet of long-wire should be fine for what you're trying to receive. I take it you're decoding on 518kHz?

Apologies for teaching you to suck eggs because if you have managed to decode a fax signal then you can easily tune into the NAVTEX signal. However, just in-case.

I simply tune the receiver to 517kHz on the dial, mode is USB, and this puts the wanted NAVTEX signals on the SeaTTY spectrum window at 1kHz. Ensure that you've selected NAVTEX mode on the SeaTTY 'mode' menu. When the two signal peaks appear, simply left-click in the centre of them to place the passband of the SeaTTY software filter over them (just like you've done when decoding the fax signal).

Don't forget that the NAVTEX transmissions are not continuous and that you may have to wait for an hour or so before anything is received.

I would always opt to use USB because I find the signal much cleaner and the fact that the USB detector is more sensitive than the AM detector in most receivers.

If you have an aerial tuning unit (ATU) in-line then ensure its passband covers the 518kHz signal. My ATU doesn't and I have to bypass it to get a good signal strength.

I hope this helps.

Regards

Chris (Bicester, UK)

3707. SV: [dxsoft] Receiving Navtex with SeaTTY

Yahoo group: dxsoft
Date: 2007-11-05 18:17:22 UTC
From: Mats Höwing
Topic: 3703 Message: 3707

Bruce,

I am using the SEAtty Software together with a PC computer on my sailing boat. The NAVTEX reciever is a receiver module from an elder ☐professional☐ Navtex receiver.

I was first trying to use it with a wire antenna and had no luck at all. There is to much noise in the air in the area where I live and my boat is located (Gothenburg in Sweden) and also from the used computer(!).

I bought an active antenna from NASA marine (bought it from JG technologies in England, quite sheap).

Together with this it is also important to take care of any possible noise coming from the computer. I used two ferrite cores placed at each end of the Navtex antenna cable. The cable between the receiver and the active antenna. Noise from the computer was injected into the antenna cable shield. The ferrite cores solved this issue.

Of course I would like to recommend to you that you first try to use these ferrite cores on the cable to the wire antenna you have today. Always worth a try.

This is based on my experience and I would like to make clear that I am maybe a quite good electronic engineer but far from a radio expert!

Good luck! /Mats

Just another thought.it might be worthwhile switching your AGC off if your receiver has this capability.

And why I assumed you'd be listening to 518kHz, I don't know. Of course, you may be tuned to 424kHz, 490kHz, 518kHz or 4209.5kHz

You could also try looking on:

http://www.beaconworld.org.uk/navtex.htm

I find the NAVTEXview program a useful utility as well.

Regards

Chris

Topic: 3703 Message: 3716

Hi,

For information I received for many years in med seas and south France very well Navtex with SeaTTY associated with NavtMsg (freeware of Gerard Hageman)and an Sangean ATS 909. For the Sangean you have to use for the MW or LW reception an stereo 3.5mm jack and plug the antenna coax to the middle pin.Download NavtMsgs and read the Quick help and the schedule (frequencies & horaries are updated every year in february)for very accurate explainations about setting the receiver & SeaTTY.If you have SeaTTY licence NavtMsg remote Seatty quasi automaticaly for each mode Navtex, RTTY,Fax,Synops reception.

http://home.planet.nl/~hagem358/Navt_GB.htm

Best regards.

3725. TrueTTY 2.60 is released

Yahoo group: dxsoft
Date: 2007-11-09 16:05:19 UTC
From: Sergei Podstrigailo
Topic: 3725 Message: 3725

Hello All,

I just have uploaded TrueTTY 2.60 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now. This feature is used by AALog 3.0 .
V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
V2.53
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The `[tn] macrosequence was made. In MFSK16 and MFSK8 modes several idle
symbols and then continuous carrier (about 2 seconds) are transmitted
by this macrosequence to help to tune to a signal. In other modes just
an idle symbol is transmitted.
V2.52
MFSK8 mode receiving and transmitting were made.

Color highlighting of received callsigns was made.
Some internal improvement were made.
V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
[...]

From: Sholto Fisher
Topic: 3725 Message: 3726

Sergei,

Thank you for the update. Is there a description of the ActiveX properties & methods?

Some are obvious like TxOnOff and ShowSetup but there are others I am not so sure about PollCallsign etc

I believe with the addition of BPSK-125 and the COM interface it should be perfectly possible to integrate TrueTTY into a PSK-Mail application (just like FLDigi on Linux).

Next it would be nice to see Olivia, DominoEX and Hellschreiber!

Hope to do soon.
Fell free to ask questions...

SF> Some are obvious like TxOnOff and ShowSetup but there are others I am not so
SF> sure about PollCallsign etc

In really PollCallsign is a single function which do nothing :-)
It exists for compatibility with previous internal builds.

Is it really useful?

At least HF DSC looks very like NAVTEX (with 10-bit words in place of 7-bits), so it can be implemented rather easy ...

Have you sound samples of these transmissions (HF and VHF) ?

Hi Sergei,

You recently gave me a tip for correcting the sound card sampling rate for Amtor, it now decodes perfect, thank you.

I am using a class D Tx for 136 KHz & 500 KHz & running RTTY with the FSK output produced at TxD.

Question - are you able to make changes to allow the Amtor modes to be produced in the same way ?

Cheers,

Gary - G4WGT.

Sergei,

I have some HF samples here. I live too far from the coast for VHF samples
but maybe someone else....

http://www.projectsandparts.com/misc/gmdss.zip

File size is around 8MB. Sample format is: 8 bit mono @ 11025KHz

> Is it really useful?

Yes I think if someone was using SeaTTY at sea and they had no DSC unit
(small vessel perhaps) it could be useful to monitor for distress calls.

Sholto.

COM-port supports asynchronous transmission only, so there is not a good way
to produce such signal without external hardware.

If I have your problem, I'd build external AFSK/FSK converter at Atmel AVR
microcontroller...

Hi Sergei,

Thank you for your comments, I thought there must be a reason why you did RTTY that way & not Amtor.

Don't worry, I will be OK until I can build a linear LF Tx or transverter & use sound card output.

Regards,

Gary - G4WGT.

3737. Truetty and OMNI Rig not tuning my radio

Yahoo group: dxsoft
Date: 2007-11-18 16:20:05 UTC
From: Gilbert
Topic: 3737 Message: 3737

It has been a long time since I used Truetty. I installed the latest and see it requires OMNIRIG now. I set it up but it dos not tune the radio and no place on the Truetty screen do I see the radio frequency. PTT and rcv waterfall are working.

1.Should the frequency show up rather than just an offset ?
how do I get it.

What to look for if OMNI does not seem to work. IO got no errors when setting it up and a using the same parameters that other programs accept fine.

G> 1.Should the frequency show up rather than just an offset ?

No, TrueTTY doesn't show radio frequency.
It uses OmniRig to autotune transceiver to desired signal or to auto-tune VFOB for VFOA with given offset.

Last option can be used, for example, to receive in FSK or CW mode (with narrow RIG filter) but transmit in SSB.

Topic: 3725 Message: 3739

Hi Sergei

I have to agree with Sholto's message of 16 November...

I think it would be useful if you were able to implement a GMDSS/DSC decoder into SeaTTY.

I think your software decoders (TrueTTY, SeaTTY and CWGet) are some of the most sensitive decoders that have been developed, and this makes them quick to 'lock' to a signal and decode it.

Keep up the excellent work.

Chris (Bicester, UK)

3746. DTMF DECODER

Yahoo group: dxsoft
Date: 2007-11-26 03:38:59 UTC
From: wayne.heise
Topic: 3746 Message: 3746

I am looking for a solution to an application that I am working on. I am running a SCADA(Supervisory Control and Data Acquisition) application on a Windows XP computer. I would like to read DTMF codes from a two-way radio system from an audio input to the sound card on the computer and use them in the SCADA application. In the future I would like to write DTMF codes back out through the sound card. The easiest solution would be to find a DTMF Decoder that can detect the codes from the sound card and transfere them into the SCADA application via OPC server or through a PLC protocol like Modbus. Has anyone seen something like this.

Thanks,

Wayne Heise

wh> something like this.

I have DLL , which can decode and generate DTMF and FSK CID:

```
extern "C" void __declspec(dllimport) CidInit(int InputSoundCard, int OutputSoundCard, int
UseDuplex, void (*CallbackFunc)(char* text));
// CallbackFunc - pointer to callback function, which is called to transfer received data
// to software
extern "C" void __declspec(dllimport) CidStop(void);
extern "C" void __declspec(dllimport) CidSend(char *Str);
// Str is ASCIIZ string in DTMF mode or
// binary CID-packet in CID mode
extern "C" void __declspec(dllimport) CidMode(int Mode, int Shift);
// Mode==0 - DTMF , Mode==1 - CID
// Shift==800 or Shift==1000 - deviation for CID
extern "C" void __declspec(dllimport) CidToneOnOff(int Cmd);
// works in DTMF mode:
// Cmd==1 - to switch Dial Tone ON
// Cmd==2 - to switch BUSY ON
// Cmd==0 - to switch signal OFF
```

Write me personal message for details.

Best regards,
Sergei

3748. AAtest - incorrect multipliers

Yahoo group: dxsoft
Date: 2007-11-26 12:55:31 UTC
From: Wim
Topic: 3748 Message: 3748

Hello

This weekend I took part in the CQ WW CW DX contest. I noticed AAtest (latest version) generated some wrong multipliers, for instance E7/9A5K --> FR, OH1VR/VP9 --> OH, VK9AA (Cocos Keeling) --> VK9N (Norfolk Is), KV4FZ --> KP2. Using the edit function or Update I was not able to correct these multipliers. I suppose this is no item when generating the cabrillo file but just wondered if there is a way to correct multipliers by myself. Took a quick look in the ENG-manual but did not find anything on this.

It use cty.dat like n6tr and k1ea. Just edit this file and you will
have right mults (exclude OH1VR/VP9)

Best regards,
Alexander mailto:aia@...

3751. Navtex 1500 Hx center freq?

Yahoo group: dxsoft
Date: 2007-11-27 22:07:16 UTC
From: Mats Höwing
Topic: 3748 Message: 3751

Sergei,

I have today , just for fun, added one Navtex reciever to my collection

It□s a receiver untit fron a □standard Radio PNW 01□

It has the center freq set to 1500 Hz.

In the Seatty screen I can see a good signal coming in but Seatty does not decode

I tested with Frisnit (sorry .) and that Sw can decode.

Any ideas?

I have one sound file saved

/Mats

Do you use the same computer?

Problem can be if your sound card has too big sampling frequency error.
Try to play with "Real soundcard sampling frequency" option...
Or make "slant correction" in FAX mode to calculate real sampling frequency automatically.

Another reason can be LSB mode of receiver. In this case you need to have "Reverse" button pressed.

From: Mats Höwing
Topic: 3748 Message: 3753

Hej,

Normally I use the computer in my boat. Now I use my home computer and is running both SeaTTY and the Frisnit SW on it.

The sampling freq is currently set to 10720,5394291577. What is a normal number to start to play with?

I will send a sound file to your other mail.

I have tested the reverse button in both ways.

Best regards

/Mats

3756. Fwd: Error in AAVoice on new machine on new machine

Yahoo group: dxsoft
Date: 2007-11-30 20:30:30 UTC
From: lou_sica
Topic: 3756 Message: 3756

Hello Alex

I know you're busy with AAlog 3, but I was wondering if you've come up with anything for this error --- and if the problem is related to AAVoice's inability to choose a soundcard on a machine where XP assigns 2 seperate mixers to the input and output of the same sound card.

Thanks again

--- In dxsoft@yahoogroups.com, "Louis Sica, Jr." <lsica@...> wrote:

Hello Group

I've just installed AAVoice on a new machine. When I launch the program,
I get the following error:

List index out of bounds (1)

After this the program does launch, but none of my Macros appear on the
macro buttons, and the program does not function properly. Any of the macro buttons give a "Cannot assign a nil to a TListBoxStrings" error. Pressing the "Mic" button gives an "Access violation at address 00479635
in module 'AAVoice.exe'. Read of address 00000000" error.

When I try to exit the program, I get an error "Access violation at address 004778C4 in module 'AAVoice.exe'. Read of address 00000000" error, and the program will only exit when forced to do so from Task Manager.

My system configuration:

Operating System: Windows XP Home 2002, Service Pack 2
CPU: Athlon 64 X2 Dual Core 5200+
Memory: 4 GB (Windows sees 3.5 GB, as expected, known "XP and 4 GB Systems" bug)
-----> side note here: Windows Sound Recorder gets a "Not Enough Memory"
error on machines with more then 2GB RAM. Is this AAVoice error possibly
related?
Sound card: Onboard Realtek ALC883 CODEC Chip
Sound Driver: Realtek Semiconductor Version 5.10.0.5449 (Never Again will I use the Microsoft drivers for onboard Realtek sound after they

messed up the AC87 driver. Always a manufacturer driver only)

Note also that TrueTTY, CWGet, CWType, and Even SeaTTY all work fine
on
this configuration without errors

Any help would be appreciated

Well I have had some nice QSO's using it and some pictures are good quality
if the s/n is high enough.

It is the only form of SSTV allowed on 30m which is my favorite digital
band.

It is no matter as I can use MultiPSK or MixW instead for these QSO's.

3764. Improvements to SAME of SeaTTY

Yahoo group: dxsoft
Date: 2007-12-06 02:05:03 UTC
From: qp2trz
Topic: 3764 Message: 3764

Sergei,

While you're in the mood for upgrades could you consider the following upgrades to the SAME/NWR mode of SeaTTY...

I'm gonna post Sergei with some suggestions for improvements for his SeaTTY software.

1. Allow for optional ignore of the EOM and a wait before stop recording timer to catch the Environment Canada version of the alert. We have to open up the audio after the EOM to hear the actual message. Environment Canada transmits a generic canned text message. I would like to record the alert as it is broadcast after the EOM.

2. Allow for decoding and activation with 1050Hz tone.
Again with optional wait timer.
The NWR broadcasts the tone right after the SAME alert data, before the EOM. Environment Canada sends the tone as a seperate alert. SeaTTY doesn't decode the tone. Please make this feature selectable.

Basically have the software configurable to behave selectively as the logic of different radios available.

Thank you for your consideration.

John

3767. mode suggestion

Yahoo group: dxsoft
Date: 2007-12-12 23:15:18 UTC
From: Henrik Thiil Nielsen
Topic: 3725 Message: 3767

Sergei, how about making a GW-PACTOR (Global Wireless Dataplex) decoder or adding this mode to those already supported by SeaTTY? As you know, many coast stations transmit GW-Pactor clear channel markers. It would be very nice to be able to decode those messages and thereby identify the stations in question. As far as I have been able to ascertain, HOKA and Wavecom are currently the only decoders (apart from boxes supplied by Dataplex itself) that can decode GW-PACTOR, and they cost a fortune.

How about making it possible to run two or more instances of SeaTTY on one PC at the same time? I would like to be able to decode for instance 490 and 518 kHz NAVTEX concurrently. It is already possible to do this in a way, but the second instance of SeaTTY that is opened cannot access the raw log file as it is already locked by the first instance.

Thank you for writing such excellent and reasonably priced decoding software, including what is easily the best NAVTEX decoder on the market!

Topic: 3725 Message: 3768

Henrik,

I believe only the Wavecom decoders for government use can decode GW Pactor itself.

The channel free markers which can be decoded by Hoka and Skysweeper are not really very interesting - mainly because all they have is a single byte ID and no-one has properly correlated these to known coast stations.

Here is all I have on it if anyone is interested in taking it further:

Globe Wireless Marker Decoding
==========

Globe Wireless provides HF marine traffic via coast stations.
They use a proprietary modem which sounds similar to Pactor.

Protocol Description

Unfortunately, the protocol they use on HF is a proprietary one for which few decoders are available. The signal uses at least two different modulations: 100 baud, 200Hz shift synchronous FSK and PSK.

Globe Wireless seems to send at least 4 distinct kinds of traffic from their stations:

*Channel Free Marker
ARQ Data (speculative)
Selcall or FSK data (speculative)
PSK data

*Decoding the Channel Free Marker
There is a repetitive channel free marker broadcast when a channel is idle.
This is in 100bd 200Hz shift FSK.

The total number of bits sent in the channel free marker is 231.
The first 98 bits compose this header:

10100101001000000011100010100011000111110110110000110101001110110100101111110010111100101111001011

Following this, an 8 bit quantity repeats 6 times - a form of FEC.

The byte corresponds to the following table:

0x47 HLF, Seoul, South Korea
0x49 KEM, Nikolski, Alaska, USA
0x4e VCS, Halifax, Nova Scotia, Canada / VCT, St. Johns, Newfoundland, Canada

0x5d KEJ, Honolulu, Hawaii, USA
0x5e CPK, Santa Cruz, Bolivia / VCT, St. Johns, Newfoundland, Canada
0x5f A9M, Hamala, Bahrain
0x63 9HD, Malta
0xc3 XSV, Tianjin, China
0xc9 VIE, Darwin, Australia / ZLA, Awanui, New Zealand
0xcc HEC, Bern, Switzerland / 9MG, Penang, Malaysia / LFI, Rogaland, Norway
0xd2 ZSC, Capetown, South Africa
0xd7 KPH, San Francisco Radio, San Francisco, California, USA / VJS, Perth,
Australia
0xd8 WNU, Slidell Radio, New Orleans, Louisiana, USA
0xdb KHF, Agana, Guam
0xdc KFS, Palo Alto, California, USA
0xdd LSD836, Buenos Aires, Argentina
0xde SAB, Goeteborg, Sweden
0xe3 8PO, Bridgetown, Barbados

There are other stations with unknown bytes.
E.g., 0x3b possibly Pt. Reyes, California, USA.
More work is needed to match all the coast stations.

Topic: 3725 Message: 3769

Henrik,

I often run two instances of SeaTTY on the same PC, fed from two audio adapters -- one built in, the other USB attached -- from two receivers, works fine.

What I have done is make two folders, one named SeaTTY the other SeaTTY2. Within one is the matching SeaTTY.exe and in the other a renamed version called SeaTTY2.exe. The settings for each are uniquely stored when they are set up, as are the various log files when they run. I start them with separate shortcuts named for the audio/receiver for which they are defined.

I have used this to compare performance of different configurations of receiving equipment. It could also be used to define different digital data modes that could run without needing to be changed after the program starts.

Hello W.,

Wednesday, December 12, 2007, 11:26:26 AM, you wrote:

WCD> I've been running the new SeaTTY v1.77f with DSC support and notice
WCD> that the MMSI numbers are shown as ten digits instead of nine as they
WCD> should be. Is there some significance in the trailing extra
WCD> digit? On a quick check it appears to always be a zero.

Rec. ITU-R M.493-11 says:

"whereas digit X10 is always the figure 0 unless the equipment is also designed in
accordance
with Recommendation ITU-R M.1080".

M.1080 recomendation is "Digital selective calling system enhancement for multiple
equipment installations".

So, probably this extra digit means something like "number of transmitter" ...

Sholto, thank you very much. That was very helpful indeed! I will try decoding the ID bytes for the stations you list. I looked through Klingenfuss Utility 2005/06 and drew up a list of all frequencies on which GW-PACTOR is used. If any of you would like to have this list, please mail me off the dxsoft list and I will mail it to you direct. The only stations on your list that are not indicated as transmitting GW-PACTOR in Klingenfuss are:-

0x49 KEM, Nikolski, Alaska, USA
0x63 9HD, Malta

On the other hand, Klingenfuss does not list any not found on your list.

Best regards

Henrik

In really it is not necessary to have second copy of exe-file at all.
You just need a second shortcut with another "Working directory" ("Start In" property).

Though size of SEATTY.EXE is small enough, so it have not big meanings :-)

Hi Sergei,

I had another thought about a really useful mode to add in TrueTTY.

If it was possible to implement the PSK ARQ (PSK-mail) mode as described on http://pskmail.wikispaces.com/PSK_arq

It is adapted for PSK from the protocol http://sharon.esrac.ele.tue.nl/pub/linux/ham/pskmail/ARQ2.pdf

Currently it is only available on Linux (uses FLDIGI) and uses PSK speeds up to 250 baud.

I know there are many Windows users who would like to try this mode but they are not familiar with Linux.

I am sure if you incorporated this into TrueTTY you would sell a lot of copies!

3780. SeaTTY 1.80 beta is published

Yahoo group: dxsoft
Date: 2007-12-15 13:47:03 UTC
From: Sergei Podstrigailo
Topic: 3780 Message: 3780

Hello All,

I just have uploaded SeaTTY 1.80 beta to the main site and error:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

All described in ITU-R M.493-11 GMDSS DSC messages decoding was fixed (please report me about found errors).
GMDSS DSC VHF decoder was made too.

I am thinking about price increase (to $45 / 35 EUR) with next release version,
so now is good time to purchase SeaTTY if you have not it yet :-)

--
Best regards,
Sergei

==========
SeaTTY versions history

V1.80
GMDSS DSC (HF and VHF) messages decoding was made.
V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.
V1.74
The "Shift" menu can be used to select normal deviation (800 Hz)
or narrow deviation (300 Hz) in HF-FAX mode now. Narrow
deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
V1.70
Minor improvements of raw log files handling were made.
V1.65

NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
[...]

Topic: 3780 Message: 3781

Sergei,

Thank you for the GMDSS decoding. I am sure it will prove very interesting and perhaps useful for those using SeaTTY in a maritime setting.

For those who would like to try the DSC decoding these are the international frequencies to try:

2187.5 kHz
4207.5 kHz
6312 kHz
8414.5 kHz
12577 kHz
16804.5 kHz

These HF frequencies are carrier frequencies. If you radio has a CW mode then this is also the dial frequency you should set your radio to. If you only have USB then try setting the dial to 1kHz below these frequencies and the DSC signals should be centered on 1000 Hz in SeaTTY's waterfall.

They are intermittant transmissions lasting only a few seconds so be patient! At this location I can usually hear 1 or 2 per minute. I find the 16MHz, 12MHz and 8MHz frequencies best during the day and the 6MHz and 4MHz best at night.

VHF DSC is on 156.525 MHz

GL!

Sholto
KE7HPV

If you see "ECC OK" in raw log, you should see decoded messages in messages three...

Ämne: Re: [dxsoft] SeaTTY 1.80 beta is published

Sergei,

Thank you for the GMDSS decoding. I am sure it will prove very interesting and perhaps useful for those using SeaTTY in a maritime setting.

For those who would like to try the DSC decoding these are the international

frequencies to try:

2187.5 kHz
4207.5 kHz
6312 kHz
8414.5 kHz
12577 kHz
16804.5 kHz

These HF frequencies are carrier frequencies. If you radio has a CW mode then this is also the dial frequency you should set your radio to. If you only have USB then try setting the dial to 1kHz below these frequencies and the DSC signals should be centered on 1000 Hz in SeaTTY's waterfall.

They are intermittant transmissions lasting only a few seconds so be patient! At this location I can usually hear 1 or 2 per minute. I find the 16MHz, 12MHz and 8MHz frequencies best during the day and the 6MHz and 4MHz best at night.

VHF DSC is on 156.525 MHz

GL!

Topic: 3788 Message: 3788

Hi, help me on this error message "Acess violation at address 004778C4 in module 'AAVoice.exe'. Read of address 00000000.". OS : XP2. I do a new intall but it's the same thing! Thank's for your help.

3789. SeaTTY 2.0 is released

Yahoo group: dxsoft
Date: 2007-12-21 14:01:31 UTC
From: Sergei Podstrigailo
Topic: 3789 Message: 3789

Hello All,

I just have uploaded SeaTTY 2.0 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
V1.80
GMDSS DSC (HF and VHF) messages decoding was made.
V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.
V1.74
The "Shift" menu can be used to select normal deviation (800 Hz)
or narrow deviation (300 Hz) in HF-FAX mode now. Narrow
deviation is used at Long wave band.
Some minor bugs were fixed.
V1.73
The "Setup->Clear Rx Window Once a Day" option was made.
V1.72
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Some internal changes were made.
V1.71
Minor bugs in text displaying were fixed.
V1.70
Minor improvements of raw log files handling were made.

V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
[...]

You need to create SEATTY.INI file in "C:\Program\SEATTY2" folder
if you wish that SeaTTY use this folder for raw logs and messages.

It have meaning if you want to execute two copies of SeaTTY simultaneously,
as we have discussed it recently.

3793. SV: SV: [dxsoft] SeaTTY 2.0 is released

Yahoo group: dxsoft
Date: 2007-12-22 10:03:43 UTC
From: Mats Höwing
Topic: 3789 Message: 3793

Ok, Im not sure I☐m getting it. Before Seatty stored messages under the program/seatty folder and now under ☐all user☐

folder.. wich seem to be more to common standards (right?)

I have not followed the disussion regarding running two copies at the same time.. But I☐ve noticed that it is possible, which is good of cource.

Maybe want to run Navtex and reciev weahther fax simultanious later on, who knows.

Can you explain a litte bit more?

If I want to run as I usually do, what should I do?

If I want to run two copies, what do I need to do then? (one issue is of cource the audio input issue?? How do I get two?)

Best regards and Merry Chrismas of cource to everyone!

/Mats

MH> Can you explain a litte bit more?

MH> If I want to run as I usually do, what should I do?

Use SeaTTY icon which was created by installer (with working directory in "Application
Data").

MH> If I want to run two copies, what do I need to do then? (one issue is of
MH> cource the audio input issue?? How do I get two?)

Create several shortcuts to SEATTY.EXE each with a different working directory and copy
SEATTY.INI
file to each of this directories.

Now I get it!!

It□s super!

One question remains though..

If I want to run Navtex and weather fax at the same time.

One receiver for navtex and another for Weather fax.

How do I get the audio (in yhis cas 2 doifferent) in to each SeaTTY copy?

Do I need two soundcards?

3797. FJ DXCC Entity for AALog 2.47

Yahoo group: dxsoft
Date: 2007-12-22 14:51:00 UTC
From: oceanbiz01
Topic: 3797 Message: 3797

Dear Alexander

How do I add FJ to the Prefix List for St. Barts???

FJ is already assigned to FS St. Martin.

I tried to make new FS and New FJ but in the DXCC box, I cannot
changed FJ to FS.

Please explain how to do this.

My Bandmaster and DXAtlas have the new prefix list from www.DXATLAS.com

Hello all,

Small problem with AALog 2.47 that I just started having this morning.
Upon opening AALog, a box comes up stating "Access violation at
address 005655E9 in module 'aalog2.exe'. Read of dress 02C78000."

Upon clicking "ok", the program comes up without any problems.

Any ideas / thoughts?

73,
Jim, wi9x

3800. New entity

Yahoo group: dxsoft
Date: 2007-12-24 13:08:01 UTC
From: Paul Beringer
Topic: 3800 Message: 3800

I've been having a problem adding the new FJ St. Barthelemy entity. Since St. Martin has changed to FS and AAlog sees FJ as St. Martin, all my FS contacts are St. Martin and the FJ/OH2AM operation is logged as St. Martin. I tried to edit FJ in the prefix list as St. Barthelemy but that doesn't work. So I tried to add FS as St. Barthelemy in the DXCC preferences but that causes the prefix db to be corrupted. So do I need to delete FS as "another prefix" for FJ in the prefix list? Maybe the AAlog authors could generate another update for the Awards db and prefix db and get this straightened out.
Thanks

Message from WIM, it worked for me too:

I did it (for DXCC) as follows:

- Tools -> Award References -> DXCC -> Quick Search: FJ -> edit FJ -> FS (St Martin, right mouseclick).

- Tools -> Award References -> DXCC -> Add FJ (St Barts) through a right mouseclick in an abitrary Prefix.

- Tools -> Prefix List -> Quick Search: FJ -> delete additional prefix FS (right box under 'more...', right mouseclick).

- Now right mouseclick in FJ, edit FJ -> FS both Prefix and DXCC box.

- Now edit all old FJ contacts to FS. Search with FJ* and you can edit each qso by opening them and clicking on the 'Territory Continent' box. Type FS in New Territory, click OK and Save.

After this I did a Refresh of the databases and a Rescan of my DXCC logset in the Awards Manager.

note: I did not have so much old FJ contacts to edit to FS.

I made the changes as noted by Dan and now have Prefix & DXCC updated.

Thanks, Dan for the helping us AALog users sort this out.

Seasons Greetings, Paul S.

3805. EU 30 Meter Digital Weekend Event 19/20 Jan 2008

Yahoo group: dxsoft
Date: 2007-12-29 22:13:16 UTC
From: Don
Topic: 3805 Message: 3805

EU 30 Meter Digital Weekend Event

When: January 19th 2400 utc to January 20th 2400 utc
2 days of digital fun, ragchew and DX on 30 Meters, all
day or when you can.
(NOTE: When 30m is in decent shape please note for NA band has been
open to EU from 1900 to 2300utc for ZL/VK open to EU has been open
from 1200 to 1700 utc.appx times of course depending on band
conditions)

Where: 30 meter Band 10.135 to 10.145 MHZ

Modes: Mainly PSK31 10.140 +/- 1000
BUT all digital modes welcomed including
RTTY/MFSK/HELL/WSJT/etc.

Objective: For Amateurs Worldwide to make contact with EU Stations to
promote and increase digital mode activity on 30 Meters.

This is not a contest but a casual event in promoting 30 Meter Digital
activity in conjunction with the 30 Meter DigitalGroup:

http://www.30meterdigital.org
http://www.groups.yahoo.com/group/30meterPSKGroup

Contact: Graham m5aav m5aav@30meterdigital.org
Don kb9umt kb9umt@...

***Please note logs do not have to be sent because this event is to
promote 30m digital activity. We would appreciate though if you have
time to just give a count of stations worked and email to the above
addresses so that a report of the weekend activity can be produced.

3806. CW Type type ahead

Yahoo group: dxsoft
Date: 2008-01-01 02:10:05 UTC
From: Mike
Topic: 3806 Message: 3806

Some newbie questions coming up.

I am able to type ahead while not in the transmit condition but as soon as the s/w starts transmitting I have to wait until it is done with the current content to continue typing then it will only take a letter or two at a time.

I am having some RF probs in the pc but those are not affecting this just other programs.

I have been off air for several years but it seems when I used this then I could type ahead during transmit at will.

I couldn't find it in the help file so would appreciate any insight.

Thanks
Mike

Dear Serge!
Happy New Year for you and your team!
On the eve of 2008, uproximatelly, 2 weeks ago I've wrote you about my problem: I tried to install AALog program on my new PC, but didn't find the old key for AAlog (AAvoice and Claster keys OK), you granted me in 2002 after my payment. Is it possible to help me from the beginning of the year to start Logbook in time. Hope to get your answer in the nearest days.
My best regards from Moscow,
UA3ADW - L.A.Shuvalov

3809. Need help with QSL labels

Yahoo group: dxsoft
Date: 2008-01-02 02:39:37 UTC
From: Norman Wald
Topic: 3809 Message: 3809

I am completely confused about how to make QSL and address labels in AALog version 2.47.

I have a log with about 5000 QSOs, but can not seem to get AALog to communicate with AALLabels. I see the label designer and some ready-made designs, but I can't get the logbook to print.

Also the Help file is missing from AALLabels

I want to print QSO data on Avery 5160 labels (30 up, 3 column, 10 rows) and also address labels with data from my QRZ CD.

Can someone advise me ? This is my 3rd request!

Norman W9VQ

AALabels is only labels design generator. Do you put QSLs to QSL
queue in AALog (Ctrl+L)?

Best regards,

Norman,
I have a 5160 configuration file that you can use to make 4 up labels.
I'm at work right now so I can't send it to you. When I get home, I'll
attach the file and you can save it to your "Program
files\AAlog\Labels" folder.
I'll give further details on how to use it.

3812. HELP!!!

Yahoo group: dxsoft
Date: 2008-01-02 15:32:12 UTC
From: Fred
Topic: 3812 Message: 3812

I want to go digital on most of my operations here, I got the program CWGET and it works pretty good with my sound card. Well I keep talking with so many that use a MFJ or West Mountain I think tnc instead of the sound card. I now have the new MFJ tnc and have yet to wire it up. I guess that it will improve operations since it does have filters built into it, but what if the main reason for using the tnc or interface in the line if the sound card I am told will let me do it all... I just mixed up on this.

Thanks for your time,

Sergei

That was my question to you. It has cleared some since I took care
of the RFI problem into the PC but once again I'll describe it to you.

First the PC is a 1.66 Ghz sempron w/1Gig of memory.

I can type a line of code into CWType ahead of time for example:
KD5XXX de K5MKY RR tnx for fb report. ur rst is 579 579. name hr is
mike mike, ex qth is tx tx.

I hit transmit and the s/w starts keying the code throught the rig
(Yaesu 1000MP). While the keying is taking place I am not able to
continue typing further comments at the end of the above line until
the s/w finished the sending. Occasionally I can get a letter or two
in but nothing near like sitting here and typing this to you.

As I said it has cleard up some since the RFI had been taken care of.'

Hope that helps.

Tks
Mike

I am asking again - WHAT DO YOU MEAN when write "I am not able" ???

Probably, you mean that your keyboard don't answer to you key pressing.
Yes, it can be RFI problem.
To check it, just switch your RIG off (or reduce power) and see difference.

And surely, hardware RFI problem can not be fixed by software.

M> typing further comments at the end of the above line until

From: Sholto Fisher
Topic: 3806 Message: 3815

Mike,

It sounds like your keyboard might still be getting some RF. Is it a
wireless keyboard? If not you could try wrapping the keyboard lead several
times around a ferrite toroid (eg FT-140 43) and see if that cures it.

As Sergei says, the easiest way to test is to reduce power to QRP levels and
see if it clears up.

3817. CwType 1.70 is released

Yahoo group: dxsoft
Date: 2008-01-03 15:38:05 UTC
From: Sergei Podstrigailo
Topic: 3817 Message: 3817

Hello All,

I just have uploaded CwType 1.70 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now. This feature is used by AALog 3.0
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
V1.60
A bug was fixed - PTT didn't work in "manipulation via OmniRig" mode
during sending from AALog or AAtest.
The ~[ab] macrosequence was made - to clear the input window and
switch TX, beacon and "pause" off.
V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.

Why do you want answer from vendor? More interesting are user opinions...

I think, TNC is needed for ARQ modes only (AMTOR-ARQ, PACTOR etc...)

I almost sure that TrueTTY will beat any TNC in RTTY or AMTOR-FEQ ...

3826. MFSK16 in TrueTTY

Yahoo group: dxsoft
Date: 2008-01-17 19:36:04 UTC
From: Sholto Fisher
Topic: 3826 Message: 3826

Hi Sergei,

Some software seems to send a different idle sequence in MFSK16. This appears as 'box' characters in TrueTTY.

E.g. FEET F ED WITH HOME MADEdoPENWIRE TO A HOME MAD E " Z"
MATCH TUNER. THAT IShni:t?aokT TO TUNE UP GOT THE HI SWR READING ON
THE DISPLAY . T HEY SHOULD HAVE AN AUAaktKLARM FOR HI SWR BUT JUST
WORDS . AG E HR IS 64 LICENSED IN 19 63 AND RETIRED
FROM THE FONE COMPA

Is there any way to supress these characters so the text is more readable?

73 Sholto, KE7HPV

3827. CwGet 1.61beta is published

Yahoo group: dxsoft
Date: 2008-01-19 09:50:32 UTC
From: Sergei Podstrigailo
Topic: 3827 Message: 3827

Hello All,

I just have uploaded CwGet 1.61 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========

CwGet Versions History

V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.
V1.60
Minor bugs were fixed and some minor improvements were made.
V1.55
A text in the receiving window is not truncated automatically now.
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.
[...]

Obvious way is to fix software which send a wrong idle character :-)

Yes it seems every programmer has a different way of doing the idle sequence in MFSK16.

Thanks for the CWGet update too. I will try it out later - I have MRP40 as well so it will be a good test side by side.

73, Sholto KE7HPV.

Hi Sergei, A joy to hear from you! It makes my day. LONGER!

Working with mirrors has always been the pasture of window makers and program fondlers. Nothing will change except that I'll try again. Probably again and again.
At least I'll stay in from the cold, which while not enjoyable in itself is better than programs that won't load.

best regards on CW and else where as you will hear from my tremoring fist. I've been doing Morse for 72 years both International and Continental. I won't stop just due to a mere recalcitrant program

73 and numbers like that

Hello, Four years ago I played PSK 31 with a IC 756. Got very sick and sold out everything excpt and old Kent key and a rocket launcher mast.

Back again with zero memory, a K 2 and a Signalite PSK interface on order.If I am up to my ears in it I won't say the magic word. I can see, in my minds eye, how to transmit but I can't for the life of me figure where the waterfall will come from or indicate onthe K2 LCD.

I can still do CW in my head at good speed but can't send for beans due to a tremor which dominates the left hand. See me with peas on a fork!

Now to add to my woe is my inability to down load the CW program. Given it a dozen tries and over both mirrors too but it stops at a little box with the number 5 in it. Would appreciate a CD of the program as I expect that will run. Of course I'll pay to the tab for the CD and mail and more if there is a fee.

I'm not planning on putting the K2 on the air unti I geet al my ducks in a row. If I can ever find W7SNH at home across the Puget Sound I'll have him straighten the PSK business for me. He always was smarter than me! Maybe nicer too!

Hi Sergei,

I think the most useful new mode to add to TrueTTY would be Olivia.

I see it used all the time on many bands and it would be fantastic if
TrueTTY could do it.

I think the source code is easily available too.

73, Sholto KE7HPV.

Hello Sergie,

I'm not getting any images on SEATTY HF FAX. I am RX the fax sound on several frequencies including 8503.9 kHz. I could have possibly messed up on some configurations. What should the following data read?

AFC LOCAL DEVIATION
AFC GLOBAL DEVIATION
SPEECH THRESHOLD
SETUP- WHAT SHOULD BE CHECKED
SHIFT

I have been getting very good images up until I start playing around with numbers. I also get various notations on the bottom of the screen that speed is incorrect and image is being received.

Can you please help me get it straight?
Thank you,

73 de Jerry KC5YRE

3844. SV: SV: [dxsoft] SeaTTY 2.0 is released

Yahoo group: dxsoft
Date: 2008-01-29 22:03:16 UTC
From: Mats Höwing
Topic: 3789 Message: 3844

Sergei, I□m working on the old issue to have two SeaTTY running at the same time. One NAVTEX receiver and one WEFAX receiver. I have added a sound card (USB type). It seems to work actually but please can you explain how to create the SEATTY.INI file and what the content should be? How does it work? What does the .ini file do?

1) I have created two working directories SeaTTY_Navtex and SeaTTY_WeFax .

2) I have created two shortcuts that starts SeaTTy in those directories.

The setup was not saved at each configuration from the beginning. I read then your old your mail about the .ini. I don□t understand how to but I just created one text file (seatty.ini) at each working directory. But still the files are empty.

Please, explain how to do it correctly!

Best regards

/Mats

MH>

MH> Is this OK?

You need to create SEATTY.INI file in "C:\Program\SEATTY2" folder
if you wish that SeaTTY use this folder for raw logs and messages.

It have meaning if you want to execute two copies of SeaTTY simultaneously,
as we have discussed it recently.

From: Sergei Podstrigailo
Topic: 3789 Message: 3847

Hello Mats,

Wednesday, January 30, 2008, 10:35:01 PM, you wrote:

MH> Th file is seatty.ini.txt.

MH> How do I create a file seatty.ini in XP. I know how to do it in DOS?. Which
MH> doesn?t help me at all?

Just rename file by explorer ...

Or run "CMD prompt" and do it like in DOS.

Or copy SEATTY.INI file from default directory to another.

MH> :-)

MH> However, the settings seems to be saved for those two working directories?
MH> how come?

If SeaTTY doesn't see SEATTY.INI file in working directory, it changes working directory to default.
So you need at least empty SEATTY.INI file ...

3850. SeaTTY 2.0 - GMDSS DSC ATIS

Yahoo group: dxsoft
Date: 2008-02-11 12:19:07 UTC
From: Erik & Ernie Slim van Geenen
Topic: 3850 Message: 3850

I was monitoring VHF marine channel 77, ATIS signal.
In SeaTTY mode VHF GMDSS DSC
and got this on the display.

> 110r 109r 108r 125d 125d 125d 125d 121d 121r 92r 44r 3r 23r 8r
127d 106d >> ECC OK

I think it is an ATIS signal but it is no text to read, any
translations available ? (it should be something with PC2308)

I'm aware that GMDSS DSC is on other channel on VHF, but ATIS signals
are also nice to translate.

Erik

Topic: 3789 Message: 3851

Hello Sergei,

I was wondering if you had thought of integrating SeaTTY with OmniRig (or direct CAT control) then with a little programming it would be possible to specify a "decoding schedule"

For example: at 09:00 switch to frequency XXXX MHz and receive a FAX from NOAA, at 09:30 switch modes to Navtex and copy a WX bulletin on frequency YYYY MHz etc.

This would be a very powerful option and would allow mariners to copy relevant safety information completely automatically....

3853. Question about TrueTTY squelch

Yahoo group: dxsoft
Date: 2008-02-11 22:44:35 UTC
From: Sholto Fisher
Topic: 3848 Message: 3853

Hello again Sergei - I have a question about the squelch in TrueTTY.

Is there any way to increase the speed at which the squelch operates?

I find I can set the squelch accurately using the Spectrogram and decode
a strong transmission properly but quite often the squelch does not
initialize for many seconds after the transmission has finished which
leaves lots of garbage characters being decoded until it starts to operate.

I think a faster "on time" would mitigate this?

73,

Sholto

Date: 2008-02-28 16:05:20 UTC
From: Sam Bridges
Topic: 2821 Message: 3857

Hello Sergei:
I have successfully employed your Cwget on my laptop. It does work; if not always better than I expected.
I am unsure as to what features were gained by paying the fee? Not that I mind as I think your price is well worth it. Also I think talented programmers such as yourself need to be encouraged.
In any case, is there a manual which indicates the features and how those features are accessed? Is "AutoThr" still not refined? Or what is the difference in the full featured program of CwGet?
Tnx . 73 de KJ4ZM Sam

From: Earl Bailley
Topic: 3855 Message: 3860

Hello Bruce.

Couple wrongs, easy to fix.

Never sent any note claiming i registered. I will register for CW TYPE only when I get a receiver on line (NONE now)

I can receive to at least 50 wpm in head but no longer can send anything for beans as have tremors in arms.Used to have a nice fist.

Now plans are Cw Type and PSK 31 both thru a Flex-Radio V 5000A

I have never successfully copied the download of either albeit I have most.

Need a CD for CW type but got chased out of the parish by Sergei

Lemme know

Topic: 2821 Message: 3861

Hello Sergei:
Well, I took your advice and downloaded 1.61 beta. Unfortunely it no longer decodes Morse. The upper window looks just the same as in 1.60 and the bottom window also looks the same. BUT the middle window succeeds at nothing. Most of the time nothing is printed and at other times it is gibberish. Whatdo I do now? I was thinking I would delete all the CwGet from the computer and then try again. But then I will have to register again? Let me know what to do.

Subject: Re: [dxsoft] Need help with QSL labels

Dear Alex

I have not been able to get LOTW and BV7 Label maker to recognize my 60 meter QSOs. So, I opened the ADIF file which I exported and I see in Windows Notepad that each 60 meter QSO is shown as <BAND:0> with no 60 following. Is there a fix for this in AALog 2.47 ?

Best Regards
Dan Schaaf

Subject: Re: [dxsoft] Need help with QSL labels

Hello Norman,

Wednesday, January 2, 2008 , you wrote to me:

NW> I am completely confused about how to make QSL and address labels in AALog version 2.47.

NW> I have a log with about 5000 QSOs, but can not seem to get AALog to communicate with
NW> AALLabels. I see the label designer and some ready-made designs, but I can't get the
NW> logbook to print.

AALabels is only labels design generator. Do you put QSLs to QSL
queue in AALog (Ctrl+L)?

Best regards,
Alexander mailto:aia@...

3872. CWGet used as a TNC?

Yahoo group: dxsoft
Date: 2008-03-17 02:06:59 UTC
From: lou_sica
Topic: 3872 Message: 3872

Is it possible to have the text output from CWGet output to a COM port, as if it were an external TNC? I'd like to be able to use the text from CWGet into an external logging program (DXKeeper), and unless/until I can get the author to interface directly with CWGet I'm thinking this may be the only way to do it.

Thanks to all.

3873. *** CWGET versus Windows 98 and RAM Needed??? ***

From: Charles Schubert
Topic: 3873 Message: 3873

G'Evening All,

Will CWGet run on Windows 98???

How much RAM is needed to do this.

A friend of mine, Harry N5GCI, needs to know, for his
station.

He has roughly 256 meg of RAM. At this time, we do not
know if he can get more for this systm, or not.

Thanks for your help.

Sergei H E L P !

I downloaded the CWType 1.7, Loaded and ran the
program. It keep everything BUT the com port that
I was using. I had ver.1.6 up and running on com
port 6 (USB port w/DB9 adaptor to the rig). With
ver. 1.7 the only com port that it is looking at
is 'com port 3'. I have reinstalled the DB9
adaptor and it keeps coming up as com port 6,
that's the one the computer is using. But 1.7
does not see it.

TrueTTY has such feature, but CwGet has not.

Simple software which receive data by DXSOFTEX.DLL and send to COM-port can help ...

3893. CwGet 1.65 is released

Yahoo group: dxsoft
Date: 2008-04-10 15:20:23 UTC
From: Sergei Podstrigailo
Topic: 3893 Message: 3893

Hello All,

I just have uploaded CwGet 1.65 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

Your feedbacks are welcome.

--
Best regards,
Sergei

==========

CwGet Versions History

V1.65
CwGet can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
Some minor bugs were fixed.
V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.
V1.60
Minor bugs were fixed and some minor improvements were made.
V1.55
A text in the receiving window is not truncated automatically now.
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"

menus can change colors of all elements of spectrogram or oscillogram
window now.

3903. CWType and laptop

Yahoo group: dxsoft
Date: 2008-04-21 17:57:05 UTC
From: ea6vq
Topic: 3903 Message: 3903

My new laptop (as most new laptops) does not have an LPT port to connect the paddle.

I have tried using a PC-Card (Sunix CBP0020 http://www.sunix.com.tw/it/en/Product_Detail.php?class_a_id=0&sid=266) in order to connect it, but it doesn't work. It seems that that card does not allow to set the LPT base address, so there is no way to configure it in CWType.

Anyone has managed to connect the paddle to a laptop using some PC-Card / PCMCIA card? Which one?

Many thanks.

73. Gabriel - EA6VQ

Does the Laptop have a Serial Port. Serial portsw work great. Or, you can buy a USB to serial port adapter. That also works.

3906. Different version

Yahoo group: dxsoft
Date: 2008-05-10 21:47:47 UTC
From: Paul Beringer
Topic: 3906 Message: 3906

I am currently using ver 2.46 and was wondering if there is a good reason to upgrade to ver 2.47. 2.46 has worked very well, is stable (mostly) and does what it is supposed to do. Any opinions? I'm especially interested in the quirks of upgrading.

~[...] macroses works _before_ transmission.

So you need to use `[cl] and `[csnt] at the end of macros.

Dear Sergei

When will you modify TrueTTY and CWType so that both programs can be on screen at the same time? I would like to switch between RTTY and CW without closing one program and opening the other program.

Hello Sergei

So if the UNUSED program is TrueTTY and port is set to NONE, then, when I want to use TrueTTY, is it necessary to make CWType port UNUSED and then set TrueTTY port ON ?

Or is the port automatic?

What do you mean?
Please show full macros text and describe what do you want to get.

t> and what should i look for on the
t> display to show they are working?

~[csnt] will clear sent window immediately afer Fx key with this macro pressing.
`[csnt] do the same but only went it was "sent"

~[cl] clears input window immediately.
`[cl] clears input window when "sent" (so it must be last text in a macros).

tnx for the reply Sergei, guess i was confused...cause i did notice
the difference between the `[cl] and ~[cl] and the documentation did
not explain the way the display was supposed to react...agn tnx
much terry

3919. AA-test/PACC

Yahoo group: dxsoft
Date: 2008-05-27 08:34:47 UTC
From: Wim
Topic: 3919 Message: 3919

I have the following question.
During the last Dutch PACC contest I was not able (as a Dutch station) to configure AAtest correctly for the Dutch PACC contest.
In contest configuration I have selected: Dutch PACC contest.
I configured Station info with the required fields (PA0WRS etc..) and entered in the User exchange: ZH. ZH is my province and is to be sent with the report (599 ZH).
Now when I activated the NEW button in the sent box appeared 001 (not ZH).
Now when I changed 001 to ZH which I sent to the DX station I worked, AAlog gaves an error: 'ZH' is not a valid integer value.
so I was QRV in the contest signing 599 ZH while AAlog logged 599001, 599002 etc..
So afterwards (after generating the Cabrillo file) I had to edit all serials numbers 001-410 to ZH, which was very timeconsuming.
Anyone any idea?
Wim PA0WRS

3920. TrueTTY 2.70 is released

Yahoo group: dxsoft
Date: 2008-06-05 18:24:33 UTC
From: Sergei Podstrigailo
Topic: 3920 Message: 3920

Hello All,

I just have uploaded TrueTTY 2.70 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
[...]

3925. AALog 2.47 Question

Yahoo group: dxsoft
Date: 2008-06-08 14:41:59 UTC
From: oceanbiz01
Topic: 3925 Message: 3925

Hello to anyone who can assist me.

I have AALog 2.47 installed on Computer A and Computer B. I already have a 6 Meter log on both computers and both computer logs have the same Log Name i.e., "6 Meter Log". However, I have been using Computer A for all of my 6 meter operation and now want to use Computer B instead.

I need to transfer my 6 meter log from computer A to Computer B. How do I do it ???

Do I simply copy the 6.db file from Computer A to Computer B ? Or do I copy all files 6.xxx from Computer A to Computer B?

Or do I export ADIF from Computer A and Import ADIF into Computer B?

Dan K3ZXL

Yes, you can. But Need add record about it into AAlog. Create new log
and select 6.db as the log file name

Use the "filter" with F9, make um log only 6m, after export in format ADIF and import to other PC.

Enjoy! :-)

V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.

3931. CwGet for Windows Mobile is published!

Yahoo group: dxsoft
Date: 2008-06-26 13:00:05 UTC
From: Sergei Podstrigailo
Topic: 3931 Message: 3931

Hello All,

I just have uploaded beta-version of CwGet for Pocket PC (Windows Mobile) - CwGet PPC V0.50
:

http://www.dxsoft.com/cwgetppc.zip
http://www.hamport.com/cwgetppc.zip

Not all features are implemented yet, but software already worked, at least at my
Fujitsu-Siemens Pocket Loox 720 :-)

Your feedbacks are very welcome!

Best regards,
Sergei

3932. SeaTTY 2.10

Yahoo group: dxsoft
Date: 2008-06-26 13:08:44 UTC
From: qp2trz@yahoo.com
Topic: 3932 Message: 3932

Sergei,

Thank you for the update to SeaTTY.
The five minute timeout works well for analysis.
Our full warning cycle runs a balmy eight minutes in length.
Could you please add an optional timeout length of eight minutes or even better, optional selectable recording timeout length of say up to ten minutes.
Great software.

Regards,

Joseph

Sergei,

This is good news! I will try it on my iPaq H1940 this weekend. Do you have any plans to make SeaTTY or TruTTY available on Pocket PC? Perhaps NAVTEX would be good for Mariners?

Another question, is Windows Mobile a real-time OS? if so, would it be feasible to program precisely timed modes such as Pactor-1 or AMTOR? It could be very useful to use a PDA/Smartphone to send & receive emergency email traffic via WinLink 2000 in Pactor-1.

Thanks again,

Topic: 3931 Message: 3938

Hello Sergei,

I have now done some testing of the PPC CwGet program on my iPaq 1940.
It seems to work nicely and I can successfully decode CW with it.

It can be a little slow when there are other programs running (processor
is only 266MHz) but if you stop the other programs then it is responsive.

Will my existing license for CwGet work with this version or do you have
to pay for a separate license?

By the way what do the numbers at the bottom of the screen signify?

I don't know about CWType but CWGet works with my Signalink USB. I just set the Input Sound Card in the Setup menu for the Signalink. I did find I usually have to turn the RX knob on the Signalink all the way up for CWGet while I have to turn it way down for my PSK31 program. If there is too much noise I back of on the RX knob until the noise is gone.

Dear Alexander,

Having read your reply, I wish to ask:

In my early version of 3.0 Beta, I notice that in the Awards Manager for VUCC, the total of grids is the totalQSO/Grids worked including duplicates. Therefore the total is misleading. Will the new Beta fix this so that only unique grids are totaled?

I am not a HAM operator....more a BAR operator....cheers btw.. [:D]

Installing the AALOG software in "Program Files" of your Vista computer
gives a lot of problems. [:(]
Install that software directly on your harddisk, e.g.:
C:\Tools...or C:\Ham....

Vista protects the "Programs Files".....you or a program is not allowed
to write a log file in that area.

The case of Vista on a T0shiba laptop and a Realtek soundcard gives my
over the top blood pressure...

Hope it helps a little....i go for a Auchentoshan Triple Distelled
whisky....

3954. AAlog ver 3.0

Yahoo group: dxsoft
Date: 2008-07-28 17:26:26 UTC
From: Alexander Anipkin
Topic: 3954 Message: 3954

Dear dxsoft users,

Public beta AALog ver 3.0 uploaded to
http://www.dxsoft.com/download/aal3.zip

You can use both version 2.* and 3 together. AALog use another
database.

To copy your logs from 2.* to 3.0 Run "Convert log from ver 2 to ver
3" shortcut

First press "Check for error" button and if only no error messages
inport logs.

After you imported files, close program and run AALog. Go to Internal
Callbook and scan logset. Then run Tools|Fill
missed QSO data fields. And finally run Tools|Update award statistic.

Please note

1. RDA, URDA, County, JCC, JCG must be in Subdivision, not in State.
2. To communicate with TrueTTY and CwType use ~[jMacro] not ~[iMacro]

Best regards,
Alexander mailto:aia@...

Dear Alexander

Thanks. Now, final question:

In awards list for grids, is the grid total a total of QSOs or total of
unique grids?

The awards list shows 325 grids worked but in some cases, I worked the same
grid more than one time. If I worked the same grid 2 times, is the grid
counted only once or is it counted twice ?
Similar to WAS or DXCC is counted only one time.

Dear Alexander,

Every time I start up AALog 3 I get the following message:

"Access Violation at address 0080FADO in module AALog.exe read of address
00000306"

Then AAlog starts up after I click OK

Please explain.

Best Regards
Dan Schaaf

Topic: 3954 Message: 3959

Hello Dan,

Tuesday, July 29, 2008 , you wrote to me:

DS> Dear Alexander

DS> Thanks. Now, final question:

DS> In awards list for grids, is the grid total a total of QSOs or total of
DS> unique grids?
It's total unique grids

DS> The awards list shows 325 grids worked but in some cases, I worked the same
DS> grid more than one time. If I worked the same grid 2 times, is the grid
DS> counted only once or is it counted twice ?
DS> Similar to WAS or DXCC is counted only one time.

Logic of awards manager is the same for all awards

Best regards,
Alexander mailto:aia@...

Alex

Thank you.

When will you have labels on the window icons? Either mouse over labels or visible lables?

When will there be a help file?

Best Regards
Dan Schaaf

3967. Suggestion for future version of SeaTTY

Yahoo group: dxsoft
Date: 2008-08-05 14:36:42 UTC
From: Henrik Thiil Nielsen
Topic: 3826 Message: 3967

Dear Sergei,

How about making it possible to let the user set the working frequency by typing it in. For instance when DX'ing NAVTEX although I often use AFC I prefer to start with a working frequency of exactly 800 Hz. When I use the mouse to center the frequency I usually get it wrong by a few Hz. It would be nice to be able to set it to exactly 800 Hz via the keyboard.

I sometimes experiment with other NAVTEX decoding software, but there's absolutely no doubt SeaTTY is the best!

Regards

Henrik

3969. Re: [dxsoft] AAlog ver 3.0

Yahoo group: dxsoft
Date: 2008-08-07 15:09:02 UTC
From: Dan Schaaf
Topic: 3954 Message: 3969

Dear Alexander,

I am looking at the New QSO window. When I type in a NEW prefix which I have not yet worked, the label New One DXCC is in red with a white shadow around the red font. Same is true for the country name next to the call sign. This is hard on my eyes.

Is it possible to customize the font and color and make it BOLD ?

Example, RED, BOLD ARIAL font?

In AALog 2.47 it is much easier to read.

Is it possible to customize ALL of the fonts on this window? Such as antennaheading SP and LP info?

Also, there are no mouse over labels on the icons in this window.

Best Regards
Dan Schaaf

Dear dxsoft users,

Public beta AALog ver 3.0 uploaded to
http://www.dxsoft.com/download/aal3.zip

You can use both version 2.* and 3 together. AALog use another database.

To copy your logs from 2.* to 3.0 Run "Convert log from ver 2 to ver 3" shortcut

First press "Check for error" button and if only no error messages inport logs.

After you imported files, close program and run AALog. Go to Internal Callbook and scan logset. Then run Tools|Fill
missed QSO data fields. And finally run Tools|Update award statistic.

Please note

1. RDA, URDA, County, JCC, JCG must be in Subdivision, not in State.
2. To communicate with TrueTTY and CwType use ~[jMacro] not ~[iMacro]

From: Laci Laci
Topic: 3970 Message: 3970

Hi Alex !
I know this dxcluster from AALogcontest...but into the AALog3 I cant connect to DXC
I dont know where input the station info (callsign,password ...)
maybe this funktion in beta relase is not active ?

How is diferent between "default log set"to " C " ?

When I want input for example : IOTA number into the " and " name" and "qth into the window " Edit qso info"
I get error :
"can't update internall callbook" - but data is saved

TIA
Laci

3974. TrueTTY 2.75 is released

Yahoo group: dxsoft
Date: 2008-08-14 09:02:43 UTC
From: Sergei Podstrigailo
Topic: 3974 Message: 3974

Hello All,

I just have uploaded TrueTTY 2.75 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.

From: Narynbek Djunushev
Topic: 3979 Message: 3980

Hi Endre,
As far as I know, Alex currently is out of chat due to "family obligations".
In such data-bases the files *.db, *.mb, and *.px are cross-linked.
It seems to me that, unfortunately, you have lost your log. You could check
it by opening your *.db file from Excel.
Anyway, if I were you, I would try to recover your hard-disk. There is a
special tool ("Reanimator-Disk") for such cases on Rapidshare (5 files in
the Word file attached). The interface is in Russian, but I am sure you will
manage to try it. There are some programs on the "Reanimator-Disk" which
could "reanimate" your hard-disk.
Good luck!

Regards and 73!

3983. RE: [dxsoft] Re: Ask for recovery

Yahoo group: dxsoft
Date: 2008-08-29 10:20:18 UTC
From: Chris
Topic: 3979 Message: 3983

Endre

I had a hard disk crash earlier this year. I used a program called FILE RECOVERY PRO and it did a great job. It is not free software but you can download it first, and if it works then purchase it to enable all functions. FileRecoveryPro works on deleted or corrupt hard-disk partitions.

Have a look at:

http://www.lc-tech.com <http://www.lc-tech.com/>

With any deleted file or hard-disk crash, it is better to run your recovery software from another hard-disk if possible. Otherwise you risk over-writing your wanted files by installing the recovery program itself.

This website might also provide software to recover your *.DB file so it might be worth emailing the company direct. I have found them very supportive in the past.

I hope this helps.

Regards

Chris

Hi, folks

SeaTTY Fax-Mode doesn't works using RigExpert USB Interface !

The problem is the sampling rate.

Any solution available ?

How it exactly "doesn't work" ?

HJK> The problem is the sampling rate.

HJK> Any solution available ?

Yes, just do "slant correction" to correct sampling rate error...

Sergei!

Greetings again from Canada.
Any thoughts about my suggestion to add a recording variable timeout starting at five minutes perhaps ending at ten?
This was a suggestion to the enhancement of 2.10 and the 'Ignore EOM' option.

Regards,

Joseph

3989. CwType 1.75 is released

Yahoo group: dxsoft
Date: 2008-09-09 12:46:17 UTC
From: Sergei Podstrigailo
Topic: 3989 Message: 3989

Hello All,

I just have uploaded CwType 1.75 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
V1.60
A bug was fixed - PTT didn't work in "manipulation via OmniRig" mode
during sending from AALog or AAtest.
The ~[ab] macrosequence was made - to clear the input window and
switch TX, beacon and "pause" off.
V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.
V1.55
Some minor bugs were fixed.
V1.50
More convenient input window behavior was made.
"Ctrl/+" , "Ctrl/-", "Alt/+" , "Alt/-" keystrokes at main keyboard can be
used to change CW speed now.
The "Fast Macros Edit" window is shown after right mouse button click at
macro button now.
The "Tx at keyboard, if at least NN symbols are entered" option is made
in the MOX setup.
The ~[lf] macrosequence can be used to insert a new line (CR+LF) into
Input window now. It is transmitted just as space.
[...]

From: Gabriel - EA6VQ
Topic: 3989 Message: 3991

Thanks for the update Segei,

I hope you can consider someday to release a version that supports an alternative way to connect the paddle. Today computers are not equiped with LPT ports, and none of of the LPT PC-Cards that I have tried in my laptop (and I have tried a few) work OK with CwType. I have been forced not to use CwType any more because of this limitation, and it's really a pity becasue I like the program very much.

3996. SeaTTY 2.20 is released

Yahoo group: dxsoft
Date: 2008-09-12 18:27:00 UTC
From: Sergei Podstrigailo
Topic: 3996 Message: 3996

Hello All,

I just have uploaded SeaTTY 2.20 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Your feedbacks are welcome!

--
Best regards,
Sergei

==========

SeaTTY versions history

V2.20
Message filename shows time of message start, not time of message end now.
"Setup / Other / EOM timeout in SAME" option was made.
An error was fixed - messages with station ID in filename couldn't be really deleted.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
V1.80
GMDSS DSC (HF and VHF) messages decoding was made.
V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.
[...]

Sergei, thanks for this new version.

How can I change the 'Default working directory'. With other words,
I have installed the CwType in f:\cwtype and I want to have this as
my default working directory.

Write this directory to "Start In" property of software shortcut and move CWTYPE.INI there.

Or change value of registry key

HKLM\Software\ua9ov\cwtype\DefaultDir

Best regards,
Sergei mailto:sp@...

Dear Sergei.

Thanks for your reply, but these moderns notebooks have no COMM:ports,
or LPT:ports, at all. Just USB

In addition to the existing good feature of recognizing and accepting
just valid COMM: ports, please extend that to USB, then we may control
and transmit via USB ports.

CwType can work via USB/COM converter (but not USB/LPT).

It is impossible to use USB-port without any kind of converter
(because USB port can only send and receive _data_ packets, it has not
software controlled _pins_).

And USB/COM converter is simplest converter.

Hi Endre

I'm happy that you were able to recover your log.or part of it.

After my catastrophic hard disk failure earlier this year, I now use a backup program from:

www.backup4all.com <http://www.backup4all.com/>

You can specify whole directories, types of files etc. Unfortunately it is not free though. I am sure you could find a free backup program on the Internet somewhere though.

73's

4011. AALog 3.1107

Yahoo group: dxsoft
Date: 2008-09-28 19:12:22 UTC
From: ha0dr
Topic: 4011 Message: 4011

Hi,

I use AALog 2.47 for quite a while and love it.
I started to test AALog 3. I did the full AAlog3 install, and updated
the exe to 1107. I imported the AAlog2 database through cabrillo import.
I try with my database, and play around with it.
I really like how it looks.
One problem:
If contest data is imported, and exchange in RST field is more than
RTS (like 599 002 or 599 HB) when doing award update, it always stops,
and hangs with an sql error.

(I am also trying to use it with the PCC-450 yaesu program to control
zje FT-450, but it seems that either this or that, as the use the com
port exclusively)

Best of luck
Lajos (HA0DR, AA1BW)

4019. Seatty - Is there a streaming fax signal to test Seatty weatherfax?

Yahoo group: dxsoft
Date: 2008-10-22 00:38:46 UTC
From: bizcawthorne
Topic: 4019 Message: 4019

I just purchased Seatty and have loaded it to my computer. When on the boat, the system did not work. I believe that it may have been radio interference, but I would like to check it while at home. Any chance that there is a streaming weatherfax channel to test my computer installation?

Is there any other way to test the system without the actual radio?

Thanks,
Matt

Try audiostream.wunderground.com.
There should be enough bleed in your soundcard for SeaTTY to decode what your soundcard is decoding.
NOAA tests SAME at 1100hrs wednesdays.

There is sample in wave-file:

http://www.hamport.com/download/fax_13840_1.wav

You can decode it by "File/Decode from file command" or
play by any player and decode sound, set recording input of soundcard mixer to "What You Hear".

Hi Matt,

First the broadcast schedules:
http://www.weather.gov/os/marine/rfax.pdf

Try to get some experience at home / onshore.
It all depends on the performence and adjusments of your SSB receiver
and the antenna.
Make sure that your soundcard is in recording mode
and select the input wich is connected to the radio / receiver.

Hope it helps a little.
Reg.; jan

4023. SeaTTY problem?

Yahoo group: dxsoft
Date: 2008-11-12 12:37:05 UTC
From: andy1989
Topic: 4023 Message: 4023

Hello. I have purchased the reg-code for SeaTTY a couple days ago and registered my older version back then. It was working fine with my Sony ICF-6800W and the PC.
However, I found out that there was an update and installed the new 2.20 version over the old one.
After installation of v2.20 the autostart of hf-fax receiving does not work anymore. I have tested it on 4610 kHZ (FWOC Northwood) and on 3855 kHz (DDK2 Pinneberg) the two stations i knew the previous version worked with but autostart continues not working. Also the HF-Fax seems to stop by itself from time to time cutting maps into halfs at best.
I even have uninstalled v2.20 and re-installed on restart but still no autostart even though I re-registered.
I kindly ask for advice there

Cheers
Andy

I slightly modified autostop/autostart parameters in V2.20 to improve start/stop
detection.

Probably new method works worse in you conditions :-(

Hello it is Andy again. I have to correct above post slightly. The
station on 3855 kHz is DDH3 Pinneberg and not DDK2. I have changed
back to v1.73 for now though.

Great tool anyway. Thanks big time for building it :)

Cheers
Andy

Hello Mr Heus, unfortunately I do not understand Dutch much. My native language is German and I know a bit of English too. Maybe you can type above post in German.

Hallo Herr Heus, Ich verstehe leider kein Holländisch. Meine Muttersprache ist Deutsch und ich verstehe auch etwas Englisch. Vielleicht können Sie ja ihren Post nochmal in Deutsch wiederholen.

@ moderator: I put my reply in both english and german in case Mr Heus understands it.

Cheers
Andy

Oh, probably I will need to implement settings for APT sensitivity...

It would be great if you send me a sample of problem transmission in a wave-file
(created by "File/Open wave capture file" menu).

OK. I will send you a sample file. Next scheduled broadcast starts
1520UTC. Am I supposed to take the sample in v1.73 or in v2.20 ?

Yours
Andy

Hello Sergei,

I taped a complete sample file. Where should I send it to? It is about
15MB in size. It is a bit too much to upload here.

4035. CwGet wpm range

Yahoo group: dxsoft
Date: 2008-11-19 02:09:23 UTC
From: jeraldvolpe
Topic: 4035 Message: 4035

Besides 'Locking' the speed once tracking seems correct is there anyway to establish minimum and maximum wpm settings? Most ops have their comfort range... for me it is 15 to 30 wpm. It seems like CwGet resets its wpm on noise too easily taking itself off to a wpm setting far in excess of what you are listening too... just takes a bit of a pause and some static and then you are getting bad copy until the program resettles. If this functionality isn't there (and I can't find it), could you please consider adding it to a future version. Might we also have the ability to 'stretch' the time between local and global AGC actions?

Thanks for considering.

73,
Jerry, KG6TT

4036. Help with PPT on CW Write.

From: Dave Raab
Topic: 4036 Message: 4036

I am sure this is a simple question but just want to be sure.
Should the program key the my TS-450 via the mic connector or do I need to
wire in the Key to the PC.
When I boot up the PC it will key the rig as listed in the program info.

What do I need to do to make the 450 key?

Thanks for any help...

4039. RES: [dxsoft] CallTTY 2.0b

Yahoo group: dxsoft
Date: 2008-11-26 14:34:32 UTC
From: Raul de Mello Rodrigues Neto
Topic: 4039 Message: 4039

Thanks Sergei, I already tried this function, but my problem is when the Agent (user) close the application and not save the buffer, but I will workaround with DLL.

I have other question about the CallTTY 2.0b with Asterisk where I would like know how I can get better result with Soft Phone X-Lite?

below I explain my test.

I used G711 and G729 codec's, but some times the worlds changes, maybe the problem is because the JIT of LAN. I applied Sample Rate in Skype Mode (48000), but if I change to Normal, the CallTTY change all worlds.

I tried apply the same test in the same machine, I Install the Asterisk and 2 soft phones with 4 channels Audio Vac 4 to the communication don't passed to LAN. but the problem happens again. I had about 80% of CPU process busy during the tests.

I tried too use IP Phone (POLYCON) with G.711 codec, where I captured the baud through my sound card, and it's work well. (I set Sample Rate in Normal 11025).

Regards
Raul

4043. CwGet 170 beta is published - with multi-channel decoder now.

Yahoo group: dxsoft
Date: 2008-12-09 15:05:00 UTC
From: Sergei Podstrigailo
Topic: 4043 Message: 4043

Hello All,

I just have uploaded CwGet 1.70 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

Your feedbacks are very welcome!

--
Best regards,
Sergei

==========
CwGet Versions History

V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" options enables squelch in
main RX window also.
V1.65
CwGet can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
Some minor bugs were fixed.
V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.
V1.60
Minor bugs were fixed and some minor improvements were made.

Sergie

I note that your license agreement requests $35 to get the full package.
Does this apply to the folks, like me, that have already paid for the
CwGet and 170 beta is an update? If so, I will make a payment. If not
how do I get the full package?

4048. TruTTY question

Yahoo group: dxsoft
Date: 2008-12-11 04:25:05 UTC
From: Sholto Fisher
Topic: 4043 Message: 4048

Hello Sergei,

I was thinking that it would be nice in the next release of TrueTTY to allow the numerical frequency scale to display the actual RF frequency of signals. I use TruTTY with a fixed frequency "Small Wonder Labs" PSK30 and the radio is calibrated from 10.1385MHz to 10.1425MHz. It would be nice to see that when I click on the AF of 1500 it is actually 10.140MHz. Digipan allows either an AF or RF scale.

One other small issue is that I use Windows 2000 (still) and I know from talking to other programmers that sometimes it can be possible for the sound card to stop responding if focus is lost on the application (not always but when CPU heavily loaded). This is not normally a big problem because I can close the program and restart but with TruTTY the program locks up completely and there is no way to close it. It requires a restart of the machine and that can take a very long time until all tasks are ended. Patrick, F6CTE solved this problem in MultiPSK by testing to see if the sound card sends data to the buffer and if not then to reinitialize the sound card and continue receiving. Would it be possible to do this in TruTTY?

Also one last thing, do you have any plans to add the Olivia mode? This would make TruTTY my favorite program to use if it was included!

73 es tks,

Sholto
Ke7HPV

The problem is that there is not a simple way to do that this function working _always_ true. I mean case if RIG is not in general USB or LSB mode (RTTY, DIG, CW etc, where offset between radio and audio frequencies is not known, generally say).

SF> One other small issue is that I use Windows 2000 (still) and I know from

SF> possible to do this in TruTTY?

I use W2K also, but have not this problem. But I know a lot of case when different "strange problems" were fixed by installing more appropriate sound card drivers...

So I almost sure that this bug must be fixed where it is made - in your soundcard driver...

But idea to check if soundcard buffer is filled or played during given time is useful, thank you!

SF> Also one last thing, do you have any plans to add the Olivia mode? This
SF> would make TruTTY my favorite program to use if it was included!

Yes, surely. But I can not say _when_ I will do it...

Best regards,
Sergei mailto:sp@...

Would it be possible to see your article somewhere ?.

I don't have QST, but maybe there is an Internet lunk where it can be read.

TIA

4056. CwGet v1.70 and .ini file

Yahoo group: dxsoft
Date: 2008-12-12 07:58:37 UTC
From: Fred B Deem, III
Topic: 4056 Message: 4056

OK, just downloaded and installed CwGet v1.70. Program runs fine on my Vista Home Premium box. However, I cannot save settings, I get the error that it cannot save cwget.ini. My .ini file is in the Program Data/CwGet folder, not the Program Files/CwGet folder. I might also mention that I do use OmniRig if that makes any difference.

Thanks!

Fred B Deem III

Barry,
go to the bottom of any 'dxsoft' e-mail, like this one and click on 'files' after you get in go to the bottom right and select 'add file'.
Anyone then will have access to it.
Regards,
Karel, VA3KO

I downloaded a tty program a while back and it did work just fine. I was able to read tty signals with no problems. I was using windows XP. I never tried to print the stuff that was showing on my screen but I am sure that would have been possible.

You might check the web site GNARC.com
The greater norwalk amateur radio club. I am a cw operator and also downloaded my cw type pro;gram through this site.
I built the one transistor controller and now send cw through my computer and my keyboard operates my transmitter.
real cool. If you would like, and are a cw operator, I could send this program along to you.

RD> screen and the xmit portion is 95%, how do I move them ?

If your mean CwType, it has not "received pane" at all, because it is transmit software.

It is "sent symbols window", and it is not resizeable indeed ...

From: ha0dr
Topic: 4069 Message: 4069

Hi Sergei,
I love this program and continously testing the new ver 3.
I dont use the 2.47 any more, to test more extensively this new.
I am writing about the 1112 beta version.
I could not find 2 features, that would be very helpful.

1. My comupter clock is not in GMT, but I prefer logging in GMT. Could
you add a feature to offset the log clock to display GMT ?

2. I personally like the QSO start / end time. I always used it before
the AAlog ver 2.
The start is nicely customizable. Could you add a feature for the QSO
end time also. (When save button hit) ?

Note, what I have typed in the text box will be sent once I clidk on the TX tab. As it is sent, the text will move up into the box above it. It is a very simple program to use but you must remember that it does not read cw.. only send it. In the help files I sent you, you will find the schematicd of the simple transistor controller. I only used the upper part of the diagram and it works beautifully. I can always send you cd if you have problems downloading the program from the attachment I sent.

4075. Refresh databases / F5JFU

Yahoo group: dxsoft
Date: 2008-12-25 18:01:34 UTC
From: Pierre Desseneux
Topic: 4075 Message: 4075

Hello Alexander,

I am using AALog 2.47; my log contains 16000 QSOs and operating system is Windows XP.

1°- When I need to "Refresh databases" under "Tools", this option begins in good conditions. But at about 40% of my log , refreshment stops and a windows appears under AAlog and inform me than " '3&4' is not a valid integer value ". What does this mean? How can I found this "wrong value" for erasing or changing it ?

2°- When I run "Tools" > "Awards manager" > "Rescan Log set A" there is no such problem.

3°- Is there any difference between these 2 process (Refresh data bases and Rescan log set A) ?

TNX for help and, of course Happy end of 2008 year!
Pierre / F5JFU

4076. Identifying the various modes, Online audio clips?

Yahoo group: dxsoft
Date: 2008-12-26 22:06:37 UTC
From: Bill VanOrden
Topic: 4076 Message: 4076

Is there anything online to allow a newbie to decipher what mode is being used to transmit data? A collection o f .wav files of the various modes maybe?

I am playing with a recently acquired Kenwood 940 and the True TTY and can't seem to get any readable data from the program. I have found some good strong signals and the "waveform" in the lower strip shows a well defined pulsetrain, but nothing but garbage in the buffer window.

I have no idea how to decide what mode to select and the subsequent settings (baud, etc) to use.

The "AutoFind Button" is missing from my version of the program. VBSEG

I have registered a copy of the CWGET and am having a ball. I might even take the time to learn morse code, something I swore I'd never do.

Hello Bill,
I am rather new to this too and I use SeaTTY. Sound files will help
you to find out a rtty transmission easy, for example, but to find out
the baudrate of the rtty transmission is something else while the
shift can be found out with a spectrographic analyzer.
In case of an rtty transmission you usually can see two "waves" in the
spectrographic analyzer. The distance between them is the shift in Hz.
Sound files are good to learn how a transmission mode sounds, but they
do not state much about further settings unless you use more in depth
tools

I hope this helps a bit,
Andy (SWL only at the moment)

I just kneow there had to be something like this out there. Not sure why my searches didn't turn them up, wrong keywords I guess.

I thank you folks for you help.

Hello Pierre,

Thursday, December 25, 2008 , you wrote to me:

PD> Hello Alexander,

PD> I am using AALog 2.47; my log contains 16000 QSOs and
PD> operating system is Windows XP.

PD> 1?- When I need to "Refresh databases" under "Tools", this
PD> option begins in good conditions. But at about 40% of my log ,
PD> refreshment stops and a windows appears under AAlog and inform me
PD> than " '3 4' is not a valid integer value ". What does this mean?
PD> How can I found this "wrong value" for erasing or changing it ?
In the numerical field you have string value.

PD> 2?- When I run "Tools" > "Awards manager" > "Rescan Log set A" there is no such
problem.

PD> 3?- Is there any difference between these 2 process (Refresh
PD> data bases and Rescan log set A) ?

difference is "Rescan log set" clear all tables, but Refresh database
-- not

Best regards,
Alexander mailto:aia@...

Beware of Grouply.

It asks you your Yahoo password.

Don't do that, too risky.

The stuff becomes his own momentum, you have no control !

Wolfgang & Group,

Very dodgy I think.

They seem to try this with every group, I believe it to be some sort of scam.

Just delete it.

Gary - G4WGT.

Hello Sergei and all I am a regegistered user of Seatty and have ver 2.0 my question is that in the next update I would really like see in the HF Fax part of the program is when receiving a fax and the image reaches the bottom it adds a longer part on the scroll bar and you have to click on to veiw the rest of the image. what I would really like to see is an auto scroll when it reaches the end it will keep on scrolling and follow the image. I would like to see this when you have it minimize and maximize also.

Thanks,Allen

4086. New Computer Switch

Yahoo group: dxsoft

From: Jim
Topic: 4086 Message: 4086

I recently had to change computers, and am having problems moving my log to the new machine.

I have a registered copy of AALog 2.47- and downloaded a new 2.47 from the website- but now I can't get the one in the new computer here to accept data from the old log- like to register it, accept my data, etc.

Any help?

Thank you,

Jim Stoeber, wi9x

J> Any help?

If you install AAlog in the same folder on new PC, then just copy all
files from old PC to the new one.

If you install to another folder then copy logs files and aalog.key
file to the ne PC. And then register log in the new PC. See help for
Create log window for details

Best regards,
Alexander mailto:aia@...
